Salient Features of Tantra

Chapter-1

A. What is Tantra :

Desire of pleasure and removal of pain was and still is the human tendency. Like other communities of the world, Hindus also believed that they were surrounded by supernatural powers which they considered as the cause of their pleasure and pain. For the benign influence of power and removal of the evil impact, they gave them a status of deity and worshipped them through Mantras. The important occasions which start from the conception of womb to the cremation ground, according to the oriental view, they are sixteen in number, known as Sodās Samskāras, the human subject is protected from the evil influences through the pronounciation of Mantras as a part of certain ritualistic pattern of tradition.

Physical disorders and mental ailments also were considered as wrath of supernatural power. For this they have worked out Mantric therapy, in which Māntra is considered as having healing power. Does Mantra really contain such power ? Apparently it looks as a collection of syllabus but in reality they are highly potent but their prtency is latent. One has to charge the Mantra with his own inner power for the desired results. But how to charge ? Or how to awaken the inner latent power ? As we have seen both in the preface and in the introduction that Tantra shows the way of expansion of inner power . But what Tantra is ? One may have question . This chapter is chiefly devoted for the exposition of the Subtle and sound meaning of Tantra and its related notions.

1. Lexical and *esoteric* meaning of Tantra :

Many definitions have been give for the term 'Tantra'. In the Samskrit lexicon the term Tantra has used in many senses. This term is derived from the root√tan means 'to spread out'.¹ But what is to be spread out? It is the spreading out the expansion of worldly and other Man worldly knowledge.² Esoterically, the meaning,

expansion also represents the cultivation of latent physical and mental powers.

Now let us penetrate deeper into the very term and see what it represents ? The term Tantra is a combination of two world namely, Tanoti and Trayate which stand for expansion and liberation respectively. But what is to be expanded and what is to be liberated ? Here it is an expansion of mind and liberation of energy. Let us illustrate this point.

Mind functions within a specific circle or limit. It work through the date give by senses. We can see only those thgings which our optic system allows us to see. We can not see behind the wall with naked eyes. There are also minute objects in the world which we can not see through eyes because of its limitations. Like wise, we can hear only those voices which come from the specific range. Same is the case with all senses. This indicates that mind is dependent on sense stimuli and because of this its experiences are very limited.

If we break the boundaries of mind, it can have infinite experiences of varied types. Just now it is a slave of senses. If it comes out of the clutches of sense organs, it can flow every where and can enjoy desired experiences. This can happen only after the expansion or liberation of mind from the clutches of sense organs. Simultaneously, the modification of the powers of sense or the transformation of senses through certain practice also expands the area of the functions of mind infinitely.

How Tantra help in this regards ? Tantra sheds light on the way of expansion though techniques (One of the meaning of Tantra is also technique). Tantra says that allow your mind to move every where. Expand the area of mind.³ Mantra helps in this regards. It's a vehicle for awakening the deeper forces lying within one self. A sound is a wave which carries electrical vibration of energy. The pronounciation of Mantra gives a new dimension to consciousness which penetrates deeper into inner recesses of mind.

For this, Tantra has also prescribed unique types of method of meditation. Tantra is also meditation, but it is a meditation though symbols. These may be linguistic syllables (Mantra) or geographical

figures (Yantra). Tantric way of dealing with mind is that, in which one has to attend each and every thought as a mere witness or seer and not to suppress the thought. Give total independence one can come out from the boundaries of mind and can expand the arena of mind because only unconditioned mind can realise the infinite. The observations of Dr. Lalan Prasad also leads us to this fact. In his own words, "Tantra Sādhana therefore means a spiritual path which leads to the expansion of one's mental objectivity. Meanx the arena of mental projection is also increased. When a Sādhaka attains the projection of mental arena of 360°, he becomes one with the cosmic mind".⁴

This is about the former portion of the term Tantra, that is Tanyate. Now something about the later portion of the term, that is Trayate. As we have seen, Trayate stands for the meaning "liberation". We can liberate only those things which are in bondage. For Tantra, Kundalini, the cosmic universal energy, lying dormant in human body in the pelvic region or the Mūlādhara cakra in coiled form is to be liberated. If once the Sadhaka (practitioner) liberates this energy, he becomes the master of all manifestations of energy because he has gripped the very source of energy. The way of liberation is the very core of Tantra Sādhana.

The other meaning of Tantra is that which saves or protects.⁵ It saves the Sādhaka from the wordly bondage by the constant meditation (Manana) of the Highest Reality in the form of Mantra.⁶ It also protects Sadhaka from physical and mental ailments. Thus it works as a Therapy. The Śābdakai padrum, a Sanskrit dictionary also gives the meaning of the term Tantra in which it declares Tantra as medicine and doctrine.⁷

So Tantra saves Sadhaka both as knowledge and as therapy. With the lamp of knowledge it saves Sadhaka from the darkness of nescience and with the healing process it protects him from physical and mental disorders. Hence it saves Sadhaka from both, spiritual as well as psycho-somatic calamities. It is rightly remarked by Hastings in the encyclopedia of Religion and Ethics That, it has been estimated that two-thirds of Hindu religions and one-third of Hindu medicine is Tantric.⁸

In the meanings of Tantra, give by the Sabdakalpadruma, we have seen that, term tantra also signifies the doctrine or system, (Siddhanta). So any philosophy can be called Tantra. For instance, Samkhya tantra, Gautamiya Tantra etc. The great vedantist Sree Samkaracharya has also used the term "Vainasika Tantra" for the ksanabhangavada of the Buddhists.⁹

The term Āgama is the synonyme of Tantra.¹⁰ The definition give by the Param Samhita, a Vaisnava Tantra includes all Siva, Sakti and Visnu aspects. According to it, Āgama is that which comes from Siva goes to Parvati and is approved by Vasudeva.¹¹

With the help of such information, without having any hesitation, we can say that Tantra is not a cheap literature of ghost and globin or a cult of black magic and sorceries as it is so considered. Tantra is a process or method which leads Sādhaka to the self-realization though the cultivation of inner forces. Here we close this point with the mystic definition of Tantra given by Dr. Lalan Prasad Singh. "The mystic definition of Tantra is that it is a spiritual cult which liberates from the bondage of crudeness and ignorance. The word ta is the bija-Mantra (acoustic root) or crudness. Tantra is a process of Sādhana which relieves one from the fetters of crudeness (ta). Thus, Tantra is an intuitional science which stands for the progressive realization of the Divine. It liberates one from the cimmerian darkness and leads into the divine effulgence. It is a path of Salvation. It is a science of the soul. The authoritative definition of the Tantra, is that which brings emancipation from the bondage of Māyā (tatra ya ayat trāyet yastu sa tantra parikirtitah)."¹²

After having been acquainted with the meaning of Tantra one may be eager to know about its antiquity or tradition. Now let us glance over its tradition.

B. Tāntric Tradition :

Indian spiritual heritage is contained in scriptures. Various scriptures show us different ways which culminate at one point. Tantra is also one of them. It is the greatest path which has been forgotten rather neglected. The saviour of Tantra Arthur Avalon has tried

to give a vivid description of supremacy of Tantra. Let us have a pleasure in his own words, "In this great festival, in this ancient Durgā festival of India, astrology, philosophy, smṛiti, purāṇa, Veda, Vedānta and many other musical instruments are playing in the extensive court-yard of the universe. But we are grieved to find that the great instruments of the Tantra Śāstra, in which all other instrument are included, on which all other instruments depend, and which is the sole source of all Yantras and Mantras, is today silent"¹³. This is not a fancy but it secures sound base which is also reflected in the view of Dasgupta, S.B. who concludes all the esoteric schools as the off-shoots of Tantricism.¹⁴ Off-shoot presupposes seed which is under the soil. But the question is : when the Tantra seed had been planted ? For this let us proceed with the Tantra antiquity.

Antiquity of Tantra is a very controversial problem. A complete and decided answer to this enigma has not yet been given. Antiquity can be answered only in terms of time but not in terms of soundness of principles. Ancientness is not the only measurement for the justification of any system but it should have some sound base. Tāntric tradition is fortunate to have both ancientness and soundness. For ancientness we will have to go back Indus-Valley civilization. (3500 B.C).

There is a great controversy among the scholar whether Tantra has its origin in Veda or vice versa. The reports of the excavations of Indus-Valley civilization, before the Aryan came into India, have favoured the first possibility.

Siva and Sakti symbols are highly attached with the Tāntric metaphysics. They were so deeply rooted in the mind of pre-Aryan people that they took the form of Gramdevatā. The idol of Siva and Sakti was and still being worshipped by each and every village. We shall expound this view with the help of the authentic report of the archaeologist Donald Mackenzie. As he reports, "The clay figures and images and phallic bactylic stones suggest that Durgā and 'Siva' worship was of a much greater antiquity in India than has hitherto been supposed."¹⁵ Ghose, N.N. also supports the same view. "...people were also intensely religious is proved by the discovery of a number of beautiful temples still preserved

in fine shape, which they used as places of worship of the Mother Goddess and three headed Siva."¹⁶

Vedas are composed by the Àryan people while Tantra is the gift of pre-Àryan civilization. Dr. Lalan Prasad emphatically declares that, "From all these available historical evidence, it can be said with certainty that Tantra is the cult and spiritual faith of ancient India. It is the gift of the non-Àryan civilization."¹⁷ The view of the Ram Chandra Rao is nothing but the echo of the above mentioned views. The origins are lost in the pre-history. In any case it is as old as Veda may be older.¹⁸ Here Ram Chandra Rao accepts the ancientness of Tantra than Veda as possibility. But he is sure to accept Tantra as old as Veda. As we know in Veda, we found ample references of Siva-Sakti which are the Tantric deities. The Rgveda and the Atharvaveda also contain many Suktas, like Ratri Sukta, Prithvi Sukta, Usa Sukta etc. and also Purusa Sukta, Rudra Sukta, which are related with female and male deities. This is enough pointer to declare Tantra as much older than Veda. Here the view of Nandulal Kundu will not be out of place. In his own words, "It is remarkable fact to be noted here that nowhere in some of the oldest Tantras such as the 'Màlini-Vijaya Tantra' the Rudra-Yāmala Tantra etc., no trace of the vedic influence and no mention of the vedas can be found; whereas in the Vedas we have clear evidence of Tāntric influence or influence of the 'Āgama' and 'Nigama' which go to prove that before the Àryans migrated to the Indian soil, the Tantras and Tāntric Cult were there as forming the core of the non-Aryan or the pre-Aryan civilization."¹⁹

Saivism and Śāktism are the schools of the Tantra-tradition. Both Siva and Sakti as god and goddess were prevalent in the non-Àryan Cult. We again here quote Ghose, N.N. regarding this. "The religion of the people seems to be iconic, the image of Siva taking the place of honour. The worship of phallic emblems, the linga and the yoni also prevail.²⁰ This necessarily leads us to conclude that Saivism and Śāktism are the two pillars on which the spiritual edifice of non-Àryan was established.

Here we have tried to prove Tantra as much older than Veda in terms of time. But this does not mean that they are contrary to

each other. In the Tantric treatise like the 'Kulārṇava' and the 'Mahānirvāṇa' Tantra it is declared that Tantra is a scripture for the kaliyuga while Veda is for the Satyayuga.²¹ The one principle is presented in different ways according to the moral standard of the people of the particular age. We are the people having limited life-span and senses. It is impossible to grasp Vedas that is why Lord siva has gifted Tantra for the people of the Kaliyuga, Arthur Avalon has beautifully compromised this controversy by declaring Tantra as a perfume existing in Vedic Flower.²² It can be further asked who has perfumed the Vedic flower ? For this, let us proceed towards the founder of Tantra.

C. Founders of Tantra

Vedic Flower is perfumed by Tantra. But who has perfumed Tantra is our problem of investigation. Though we know very little about it. Scholars have tried to fix the authorship of Tantra. There are two superficial contrary views regarding this nation among them one supports divien origin while the other favours human authorship, whoever may secure the authorship, we are not concerned with it. We are highly concerned with the core of philosophy. Any system can endure only by the strength of its essence. We have seen that Tantric philosophy has been prevalent since five thousand years if not more. This is enough evidence of its soundness. This soundness is infused by divine forces. How is it so ? For this we will have to peep into the related notions of this concept.

Tantra is generally considered as Āgama. Each syllable of this term is Full of significance. As Chakravarti, C., notes. "The term Āgama is explained as that class of Tantra which is addressed to Parvati by Siva."²³ This exposition supports divine origin. But at the same time we have got some other Tantras which are associated with human names. For instance, Sanat Kumāra, Dattātreyā etc. Who are considered as authors of several Tantras. Of course, they were not lay man like us but at the same time we cannot consider them as Lord Siva. We have accepted them only as seers.

Dr. Lalan Prasad has very distinctly worked out the author-

ship. He is against accepting all these scriptures as of divine origin. In his own words, "But from our point of view neither Tantra nor the Vedas are of divine origin. Both embody the intuitive vision of seers. The god head of the Vedas and of Tantra is an infinite, eternal, formless and transcendental entity. It is not a personal god. It does not have any vocal chord. There is no transcendental validity in the argument that Tantra or Veda is the voice of providence (Āpta Vākya)."²⁴ Not with standing, he accepts Siva as originator of Tantra but not Siva as we have accepted as god. In his own words, "The Founder of Tantra is Lord Siva. He is known as Ādi Guru. He is a great ascetic (Mahā yogi) and a great Tāntrika (Mahā kaula) he has oneness with the supreme God. He attained occult powers through Tantra Sadhana. It is beyond human mind to measure the depth and dimension of his spiritual power and personality. People revered, worshipped and adored him in ancient times. He is conceived to be Guṇātītā and Nirguṇa Puruṣa."²⁵

The great adherant of Tantra, Arthur Avalon differs on this point. It seems that he has accepted the founders of Tantra not as a scholar but as a devotee. He has tried to prove conclusively that Vedas and Tantras are Āpta Vākya or voice of providence. As he thinks, "As the courtiers of a royal court are not the authors, but merely the interpreters of state crafts, so the truth seeing Rishis are not the originators of the Sādhana Sāstra, but rememberers merely. It is not a Sāstra marred by mistake, errors and deception, Bhavan, the creator of all creatures, knower of all hearts, is its revealer."²⁶

The above mentioned two points are opposed to each other but what I think is that, this controversy is only at an apparent lev. If we go into the root of these views we find that the both respected scholars represent their views from the same ground, that is the ground of consciousness. Let us diffuse this statement.

There is incredible movement in the universe in every atom. Movement is a characteristic of consciousness. Universe is a combination of different atoms and they are full of consciousness. Hence universe is nothing but the ocean of consciousness.

The one and the same consciousness pervades in the man and in the animal world also. But what makes man superior to animal ? There are certain obstructions of nescience on consciousness. Only man possesses the capacity to remove these obstructions which is not possible for animal. Animal is at sub-consciousness level while man is at self-conscious level. Beyond self-consciousness there are certain layers which are known as Super-consciousness. It is not easy to reach as it seems so. Man should have tremendous power to control the natural forces, then he can realize the identity with super-consciousness. Here individual self merges into universal self. At this level he secures all the powers which we ascribe to god. It is my humble view that Dr. Lalan Prasad thinks Siva as a founder of Tantra, as a realized soul or as a soul of super consciousness. Though consciousness is same in man and superman but he has shattered off all the limitations of name and form. This type of soul can not be earthly but a divine one as Arthur Avalon accepts. We can conclusively declare that both have accepted divine origin directly or indirectly. Voice of realised soul comes, from the domain of divinity and far remote from human territory.

What is that in the Tāntric perfume-which has fragranced all the scriptures ? It is not its hoary antiquity or divine authorship but its sound principles on which edifice of Tantra system stands. Now we shall try to see the bricks of Tantra edifice under the title "Principles of Tantra".

D. Principles of Tantra:

The solidity of edifice depends upon the firmness of foundation and quality of bricks. Tāntra principles are very sound on which Tantric system is still sustained since five thousand years.

1. Principle of Polarity:

The principle of polarity is the foundation stone of Tantra system. Before going into the root of this principle let us be acquainted with what polarity is. The term 'polarity' is related with the word 'pole'. The lexical meaning of the word 'pole' is either of the two points of a body in which the attractive or repulsive energy is

concentrated, as e.g. in a magnet.²⁷

Tāntra has very uniquely worked out these two poles in the human body which is symbolically represented in Tantric treatise as Siva-Sakti. Biologically, it represents the male-female poles which is pre-requisite for any creation.

Tāntric principle of polarity works not only at physical level but it also applies at universal level. For Tantra, like human, universe is also an off-spring of the Highest Reality. The literal meaning (Vācyārtha) of the First verse of the Saundraya lahari reflect this fact.²⁸ The same view is also depicted by the Rasārnava Tantra in which siva tells Pravati that He is the Father and She is the Mother of the universe and worldly objects.²⁹

Principle of Identity:

How this polarity resides in the human body ? Every human being contains these two poles within; one is expressed while the other is latent. The externally himself expressed pole indicates either male or female character. If a person is male, female is already there but in a latent form. Same is the case of female. This new concept in biology is known as b-sexuality. But is not a new notion for a Tāntric seer. It has already been revealed by them and expressed it in terms of Hermo-phrodite (Ardhānarisvara). Let us see how the exponent of Tantra tradition, Ajit Mookerji throws light on this point. "The bi-sexual potential exist in equal male-female (M/F) ratio in the reproduction of prooy plasm. Visually it has been depicted as the form of Ardhānarisvara (Siva-Parvati), male and female attributes shown as part of the same body, hermophroditically joined. The idea that masculinity and femininity are tow factors is as illusory as that of the duality of body and soul.³⁰

Siva and Sakti are the two poles of one thing. Tantra represents polarity but not duality. Siva and Sakti are not two ultimate Realities but they are identical. This identity has been profusely described in many Tantras. We here quote only one or two. In the Mahānirvāna Tantra Lord Siva emphatically tells Pārvati that there is no difference between them.³¹ The Suddha Siddhanta Paddhati of Goraksanātha depicts the same truth by giving the illustration

of moon and moon light. As moon light is not different from moon and moon can not exist without moonlight in the same way Siva and Sakti are identical.³²

This identity is also explained with the help of the illustration of creation. In the process of creation Siva is not able to do anything without Sakti. Siva is considered as corpse (Sava) devoid of Sakti (i). The very first verse of the Saundraya Lahari purports the same view. In which it is declared that without the union of Siva-Sakti no creation is possible. Not only that but when Siva unites with Sakti only then he is able to do anything.³³ The Today Tantra also reflects the same view.³⁴ We can't go ahead without quoting the words of Sree Rāmākṛiṣṇa which are cited by Swami Prabhavananda. "Shri Rāmākṛiṣṇa was wont to say that just as fire and its burning power are inseparable, so inseparable are Brahma and Sakti". When I meditate upon Reality as at rest, he once remarked, "that is, without the activities of creation, preservation and dissolution. I call it Brahman. When I meditate upon Reality as creative, I call it Sakti. In either case I am concerned with one and the same truth, the difference being only in the name and aspect."³⁵

2. Macrocosm and Microcosm:

Hence Siva and Sakti become the invisible seed of the full grown up tree of universe. As the seed pervades in the branches, in the fruits of the tree likewise, Siva and Sakti also pervade in the universe and in the human body also. This is enough to raise a question about the relationship between the universe (Macrocosm) and the individual self (Microcosm). If there is a cold in the universe, we also feel coldness. If there is a heat, we also feel heat in the body. How is it possible? Tantra has found out that whatever is in universe also resides in human body. The third chapter of the Siddha-Siddhānta paddhati of Gorākanāth is completely devoted to this aspect. The slightest change in universe consequently reflects in body. Thus Tantra accepts the identity between macrocosm and microcosm on which the whole astrology is based.

Being a replica of universe, body contains all whatever there

is in the universe. Hence for the realization of Reality behind the universe, it is not necessary to roam into the world. Body is the best means for realization. The citation of the Ratnasara Tantra which is quoted by Ajit Mookerji is very suggestive. "He who realizes the truth of the body can then come to know the truth of the universe."³⁶

3. Concrete and positive view of Reality:

This also reflects the view of Tantra about the nature of Reality. For Tantra, Reality is not an abstract entity but can be realized through physical or mortal body. Body is not merely a gross product of Prakriti but is a divine gift of nature and because of this, the Tantra like Kularnava declares body as the temple of God.³⁷ This reflects the positive view of Tantra regarding body element which is highly neglected by Jainism, Christianity and Buddhism.

This shows how human being enjoys great significance in Tantra tradition. The Kularnava Tantra has laid greater stress on this aspect. As Vishvasara Tantra declares, "There is no birth like unto the human birth. Both Devas and pitras desire it. For the Jiva, the human body is out of all bodies, the most difficult to come by. For this, it is said that human birth is attained with extreme difficulty".³⁸

Indian philosophy believes that soul has to cross the cycle of births according to the deeds he has committed in previous life. Human birth is the only birth in which he gets complete sway over the birth cycle by doing selfless deeds. (Niskama karma). To do anything with or without intension is a property of mind. Hence mind should be first controlled. It is not the worldly objects that bind us but the attitudes of mind toward it creates pleasure and pain. This is the wisdom and ignorance of this is the knot of nescience. The knot should be broken and that is the liberation (Moksa) advocated by Tantra.³⁹

But how mind becomes the cause of pleasure and pain ? It is the mental disposition (Bhava) which is responsible for this and for Tantra mental disposition is the property of mind.⁴⁰ Worldly objects are neither good nor bad. They are as it is. But is our mental disposition towards them which binds us or liberates. Scrip-

tures like Dharma Sàstra discloses this truth by giving illustration of a person who kisses his wife and his daughter with the same limb but with different intention.⁴¹ So it is the mental outlook which distorts the world and not anything else. This fact is beautifully depicted by the Kaulàvali Tantra which is cited in the Karpura Stava Ràja.⁴²

So mind can be the means for both bondage as well as Salvatio. Among all the mental instincts, sex is generally considered as the most binding and powerful one. But Tantra has a healthy view regarding this. Tantra views sex as a positive force. There are two possibilities in the utilization of this force. If it is misused, it may prove to be a curse and a source of misery. At the same time if it is used properly with understanding it proves to be boon. To utilize it as a boon or curse depends upon us. Tantra accepts the positivity of sex energy to that extent that it becomes the source of Salvation. Tantra shows the way of sublimation of that instinct which is generally considered as the cause of downfall.⁴³

In conclusion we say that Tantra lays greater stress on mental aspect. As it is declared in the Kulàrnava Tantra, if anything is done with the purity of mind even sin becomes virtue and phenomenal world becomes door to divinity.⁴⁴ It would be more proper to say that the approach of Tantra is to avoid the two extremes, that is renunciation and indulgence. Thus it shows the balanced and healthy view regarding world and its affairs.

From this we can conclude without having hesitation that the bricks of Tantra edifice are very sound and rational. But what is that which has distort or Shaken the foundation of the system of Tantra ?

It is nothing but misinterpretation of its symbolic language which is responsible for this. One may wish to know which are the symbols and how they are unduely justified. For this let us see some of the Tantric Symbols with their proper significance with the help of Tantra treatise.

E. Tàntic Symbolism:

It is a fact that the revealer of the epic Ramayana, the Valmiki

presided over by a goddess Lakini.

Anáhāta - in the region of the heart. It is like a deep red lotus with twelve petals. Seat of air, it is presided over by goddess Kákini.

Visuddha or *Bhārati* - in the region of the neck. Seat of Sarasvati, it is grey and like a lotus of sixteen petals, presided over by goddess Lákini.

Ājñā - between the eyebrows. Also called *Paramakalā* or *Muktatriveni*, it is like a lotus of two petals white in colour. It is from this *cakra* that the three *nādis*, *Idā*, etc., spread out to different directions. Symbolised by the letters *Ha* and *ksa*, it is the seat of mind, presided over by goddess Hakini. The word *Ājñā* means order, order of *guru* who is supposed to reside in it.

Cakrabheda or *Satcakrabheda* (literally meaning penetration of *Cakras*) means the manifestation or activation of *Cakras*; it is necessary for keeping the body fit and for the attainment of *Siddhis*. The six *Cakras* are identified in some Tantric works with the five elements and the mind¹⁸. This idea appears to have been based on the ancient Upanisadic theories: for example, the heart is compared to a lotus, and it is stated to have 101 *Nadis*; one of them penetrates the crown of the head; a man moving upward by it reaches immortality. In this connexion, the following Upanisads may be consulted: *Chandogya Upanisad*, VIII. 1. 1, viii.6.6, *Katha* vi.16, *Prasna* iii.6. Certain diagrams also are called *Cakras*. Different works differ in the names and number of *Cakras*. The *Sricakra* is often mentioned¹⁹. A Tantra, called *Cakrabheda* (Deccan College MS. No. 962 of 1884-87) mentions the following five *Cakras* used in *Durgāpājā* according to *Kaulāgama*.

Rajacakra, *Mahācakra*, *Devacakra*, *Viracakra*, *Pasucakra* (see *Catalogue*, vol. XVI on Tantra, p. 163). In another manuscript (Deccan College MS. No. 964 of 1887-91) some other *Cakras* are described as *Akadamacakra*, *Rinadhana*, *Sodhanacakra*, *Rasicakra*, *Naksatracakra* (*Catalogue*, vol. XVI

on Tantra. p. 251).

*Sricakra*²⁰, also called *Sriyantra* or *Tripuracakra*, connected with *Srividya*, has been described in verses, quoted in the *Samkara-Vijaya* of Anandagiri (Bib. Indica ed. 1868) p. 255 and in the *Setubandha* commentary on the *Nityāsodasikarnava* (1.31-34) quoting from *Yamala* (probably *Rudrayamala*). The *Saundaryalahari* (verse 11) also describes it. A somewhat different description occurs in a work called *Devirahasya* (Deccan College MS. No. 490 of 1895-98). A description of the *Cakra* is as follows. A *Cakra* is to be drawn with the *bindu* in a small triangle. The *bindu* stands for *Sakti* or *Mūlaprakṛti* solidified. There are nine triangles five of which have their apex downward: these represents *Sakti*, and four, representing *Siva*, have their apex upward. The *bindu* is situated in the smallest triangle pointing downward. There are two pairs of triangles, then 14 triangles, then eight-petalled lotus, 16 petalled lotus, then 3 circles, then three boundary lines with four gates, these ten latter being the outer section of the *Yantra* and the lotuses of 8 and 16 petals being the inner section of the *Yantra*. There is a total of 43 angles. The part of the *Cakra* inside the boundary lines is called *bhupura*. The worship of *Yantra* is *bahiryaga*. *Antaryaga* is taking awakened *Kundalini* through the *Cakras*, from *Muladhara* to *Ājñācakra*, and then uniting it with *Siva* in the *Sahasrara-cakra*; the six *Cakras* are identified with the five elements and the mind.

***Sahasrāra Padma*²¹**

At the centre of the head is located the *Brahmarandhra* through which vital breath or life is supposed to exit at death. It is conceived as a multicoloured lotus of a thousand petals, facing downward.

The *Cakras*, according to the *Kaula* system, are as follows in the ascending order : *Nadicakra* in the *janmasthanā*. Based on it is *Māyācakra* in the navel (from here it prevades everywhere), *Yogacakra* (in the heart, centre of yoga), *Bhedanacakra* (in the *tālu* region), *Dipticakra* (*Bindusthāna* in between the eye-

positively. Not only that but also gave a high status as a source of salvation.

We have seen before that Tāntric view is out and out spiritual. It also views *līṅga* in a spiritual manner. The Tantric text "Anubhava Sūtram" clearly declares the *līṅga* as a source of creation and dissolution, that source is nothing but the Lord Siva Himself.⁴⁸ The another Tāntric text, the *Vāṭu/suddhākhyā Tantra* also emphatically declares *līṅga* as a creator and destroyer.⁴⁹

This view is also supported by the Abhinava Gupta. In his *Tantrā-loka*, he declares that the wise man should consider *līṅga* as a cause of creation and destruction. In the term *linga*, 'La' indicates dissolution (*Laya*) while 'Ga' stands for arrival (*Āgama*). One should worship the *Āṭmalinga* and avoid other *lingas*.⁵⁰ Not only above mentioned Tantras but purāṇa like *Siva purāṇa* and *līṅga purāṇa* also support the same view.

The *Siva purāṇa* consider *līṅga* as a first cause, the source of consciousness and substance of universe.⁵¹ While according to the *linga purāṇa*, *līṅga* is both the cause of dissolution and evolution.⁵²

There are ample references in *Tantra* which suggest this meaning. The above mentioned references are enough to conclude that *Tantra* has not applied *līṅga* as physical or gross phallus but as a prime cause of creation of universe. This view is also supported by Danielou, Alain, "When Hindus Worship the *līṅga*, they do not deify a physical feature, they merely recognize the divine, eternal form manifest in the microcosm. It is the human phallus which is a divine emblem of the eternal causal form, the all pervading *linga*."⁵³

A devotee worships *linga*. Like other forms of worship, this also secures some results. In other systems of *Sādhana*, *Sādhaka* gains salvation through penance while Tāntric worship of *linga* is very positive in nature as it secures both indulgence and liberation. This uniqueness lies in the approach of *Tantra* towards sex. How it secures both that has been reflected in the view of *karapātriji*, "Those who do not recognize the divine nature of the phallus, who do not measure the importance of sex ritual, who consider the act of love as low or contemptible or as a mere physical function, are bound to fail in their attempts at physical as well as

spiritual achievement. To ignore the sacredness of the linga is dangerous, whereas through its worship the joy of life (bhukti) and the joy of liberation (Mukti) are obtained.⁵⁴

Having seen something about the līṅga concept let us proceed with the other symbol which is also related with sex notion, that is, symbol Harmaphrodite. (Ardhanārīśvara).

B. Ardhanārīśvara:

We have been discussing about symbolism. Our first symbol was līṅga in which we have considered linga as a source of creation. But as we know, only līṅga or male pole is not sufficient for any creation. Creation is a result of copulation which demands on the other pole, that is yoni, the female pole. Tantra represents the Synthesized form of līṅga-yoni or Siva-Sakti through the symbol of Ardhanārīśvara or half male-half female form.

The concept of Ardhanārīśvara is not a fancy of Tantra seers but it also contains both spiritual and scientific significance. Universe is a creation. This pre-supposes its creator who contains both positive and negative or M/F poles. Tantra has projected this polarity in the Higher Reality. The Tantric treatise the Saundhya Lahari very emphatically and beautifully declares universe as an off-spring of the universal parents the Siva-Sakti.⁵⁵ Tantra symbolizes these two inseparable and identical aspects of the Higher Reality in the form of Ardhanārīśvara. The Vital Suddhakhya Tantra also affirms this fact. As it declares linga is Siva and yoni is Sakti. Their copulation is the result into universe.⁵⁶

Not only Tantras but Vedas also have mentioned the different pairs for pre-creation. A list of the pairs have been mentioned by Aggarwal, Vāsudeva, in his book "Siva Mahadeva".

But what these pairs indicate ? According to Tantra, these pairs of opposite is nothing but the form of energy. We may coin any name like Nara-Nārī, Kumāra-kumari, Siva-Pārvatī etc. but all these can be reduced into one Higher Reality, that is, for Tantra, is energy. When the creative positive energy combines with the negative energy, interaction starts which results into creation. Zimmer, Henrich views this fact like this: "As the symbol of male

creative energy, the lingam is frequently combined with the primary symbol of female creative energy, the yoni, the later forming the base of the image with the former rising from its centre. This serves as a representation of the creative union that procreates and sustains the life of the universe. Liṅgam and Yoni, Siva and his goddess, symbolize the antagonistic yet co-operative forces of the sexes. Their sacred Marriage (Greek : hieros—gamos) is multifariously figured in the various traditions of world mythology. They are the archetypal parents, Father and Mother of the world, themselves the first born of the pairs of opposites, first bifurcation of the primal cosmogenic reality, now re-united in productive harmony. Under the form of Father Heaven and Mother Earth they were known to the Greeks as Zeus and Hera, Uranos and Gaia, to the Chinese T'ien and Ti, Yang and Yin.⁵⁷

Tantra projects the nature of Hermaphrodite of Higher Reality in its manifestation, that is the objects of universe also. Being a part and parcel of the Higher Reality we also contain the same quality. Every male has female pole and female has male pole, in latent form. This Tantric truth has emerged out under the name of bi-sexuality in modern bio-physics. According to the law of bi-sexuality to tell somebody as mere male or female is opposed to the concept of bi-sexuality. We bifurcate the two sexes by the expressed pole. But in reality we are both male and female, Siva and Sakti.

Tantra is not only confined to the bi-sexuality but it has also located the exact place of male-female pole in the body where the bio-physics has yet to reach. According to the Tantra, the right side always represents male-sun or positive pole while the left side represents female moon or negative pole. In the Tripura Samhitā. Devi declares, "The wise should know the basic fact that the female gene resides in the left side of all males. He can not discover the self when he is alienated from his own nature."⁵⁸

Like liṅga symbol, this has also been neglected on the ground that it is related with the sex drive. Tantra views sex as a means for realizing wholeness. Though we are infinite and whole, due to the lack of wisdom of it we constantly feel finiteness. That is why we always try to reach that wholeness. This fact is reflected by

the attraction of the opposite sex. Man tries to feel completeness by uniting with the outer woman. Likewise Woman also feels wholeness by the unification with outer man. Tantra says that satisfaction of sex drive is the only easiest way for realizing infinite because it is our nature. Suppression of it will create nothing but disorders and distortion. In the words of Mookerji, Ajit, "The composite figure of Siva and Parvati as half male and half female indicates that male and female elements are balanced in both of them. Full emancipation is dependent upon our realization of this fact."⁵⁹

In conclusion we can say without having any doubt that the symbol of Ardhanarivara has nothing to do with gross physical form of sex. On the contrary, it leads us from gross to subtle. As Sree Majithia views this symbol, "According to Sociologist, the male and female secret has an external as well as internal aspect. To elevate himself to a higher plan of thought and existence, man should grasp the meaning of the concept 'Ardhanarisvara'.⁶⁰

Now let us proceed with the other misinterpreted symbol that is Yajña.

C. Yajña : Sacrifice :

The first two discussed symbols linga and Ardhanarisvara are attached with sex notion. The third symbol which we are going to discuss is also partially related with it. The name of the symbol, as it is mentioned above is Yajña or sacrifice.

Tantra is way of sublimation from gross to subtle. According to Tantra, the pleasure which comes out from the physical copulation can be sublimated into the spiritual bliss. This is the real import of the Symbol Yajña.

Before going into the root, let us first see the etymological meaning of the term Yajña. * yaj is the root verb of this term which stands for propitiation.⁶¹ For Tantra every act is a propitiation or worship of the Higher Reality. Even the action like copulation which we generally consider as low is viewed with veneration. Now let us see how this Yajña is performed externally and internally.

In the external formation of sacrifice, an altar is formed out

from special materials and by experts. Burning fire is placed inside the altar. During the performance of Yajña, clarified butter is constantly poured into the sacrificial fire. Sometimes animals are also used as an object of oblation for the satisfaction of diety. The Yajña takes place in the physical body. According to Tantra, body is an altar in which the soma or elixir is being constantly dropped from the Sahasrār Cakra or brain. This elixir is being consumed by the fire situated in the navel region or the Manipura Cakra. Semen is the gross form of elixir or soma which is ejected maximum in quantity in intercourse. Constant or frequent secretion of semen naturally results into decay because semen is the very base of life. A Tāntric Sādhaka retains this consumption through the Kundalini yoga or other Tāntric practises. This is the real Tāntric yajña which takes place within the body with the result that Sādhaka enjoys the immortality.

Tāntric notion of yajña also leads one from the individuality to the universality. The concept of Yajña is the core of the Sādhana aspect. In Sādhana, Sādhaka offers many objects like flowers, lamp of fire, fragrant powder, various types of grains namely Till, Cooked rice, Java, milk etc. But in Tantra Sādhana there is no need to offer all these things in gross form. Because a Sādhaka mentally offers all the five elemental forces or the five gross elements (Panca Mahābhūta) namely Earth (Prithvi), Water (Āp), Fire (Teja), Vāyu (Air) and Ether (Ākāśa) in the place of flower, lamp, powder etc. Whatever he does physically that is not important in Tantra Sādhana but he is mentally attuned with the universe and offers it to desired diety. This kind of yajña removes the boundary of limitations and Sādhaka feels identity with the entire cosmos.

Now let us see what seems objectionable to lay man in this symbol. As we have mentioned, in Sacrifice, sometimes animals are also offered. But Tantra has never taken the gross animals. This misinterpretation happens due to lack of proper knowledge of Tāntric meaning of animal. The Tantra like Yogini Tantra, Anadakalpa etc. have clearly mentioned that the animals like vice should be killed with the sword of knowledge.⁶² From this reference we can say without having doubt that if we take

the real meaning of ablation, there is nothing objectionable. On the contrary the proper view leads one to the infinite from finite or from individuality to universality.

Now apart from these symbols, which are largely related with sex concept, there are also some symbols which are highly significant in the Tāntric Sādhana. Among them, Symbol of 5 M's is the basic one. Now let us see about it.

D. Panca makara: 5 M's:

The misinterpretation of the Symbol 5 M's plays prominent role in the degeneration of the Tāntric tradition and system. In Tantrism, there are also some sub-sects namely, Vāmācāra, Dakṣinācāra, Divyācāra etc. Among them 5 M's, comes under the title Vamācāra. Let us see first why it is known as 5 M's. It is known as so because either are five items in it start with the syllable 'M' that is why it is recognized as 5 M's. These are namely Madya (Wine), Māmsa (meat), Matsya (Fish), Mudrā (Grain) and Maithuna (Copulation). Let us see each of the syllable respectively.

i. Madya—Wine:

Madya means wine. The inherent quality of Madya is to make man aloof from the outer world. To forget the frustration created from the machine age, man resorts to take wine, which gives him temporary relief.

Madya is not utilized in Tantra in the sense of wine. In Tantra madya is not a liquor but as the Kulārṇava Tantra declares, it is an energy.⁶³ All of us have a treasure of energy which is hidden in our body. Tantra shows the approach of awakening of it. Sādhaka, who awakens the centres of energy (Cakra) releases his senses from the engrossment (Pāsa) of the outer world. The utilization of this Tāntric Madya results into not in a temporary relief as it so happens in the gross wine but it gives life-time bliss to the Sādhaka. By doing so he yokes his self with his original nature, that is Siva or limitless infinite element. The peculiarity of Tāntric madya is that, as the Kulārṇava Tantra declares it leads Sādhaka to Brahman.⁶⁴ or a state known as Brāhmī sthiti (i.e. identity with ulti-

mate Reality).

Hence for Tantra, Madya is not a wine and Tantric Sādhaka is not a drunkard but he is a worshipper of Sakti or energy.

ii. **Māmsa—Meat:**

The meaning of Māmsa is meat. It is meat. It is one of the seven components of the body i.e. rakta (Blood), Rasa (Essence), Māmsa (Meat), Majja (Veins), Asthi (Bone), Sukra (Semen) and Meda (Marrow). Meat is utilized for food purpose by animals as well as human beings. But how this meat is related with Tantra ?

In the Tantric puṇā, meat of an animal, sometimes of a human being also is offered to a deity for the satisfaction of deity. But to utilize a gross meat is not consistent with the Tāntric meaning of meat. What is then the Tāntric meaning of meat one may question.

Generally, we get meat by killing the animal. In Tantra whenever the term animal is used, it does not indicate animal like goat, donkey, deer etc. In Tantra, man in a natural state is considered as Pasu or an animal. To sacrifice this animal means to raise man from his natural state to a Supra natural state or even to the spiritual state. Offering meat means process of sublimation, from gross to subtle. According to the kulārnava Tantra those who does so is the real eater of meat and rest are the killers of life.

So Tantra has never favoured the killing of any gross animal but one has to kill his animal like gross instincts.

iii. **Matsya-Fish:**

Matsya stands for fish. In Tantra it symbolically represents mind and prana, the Vital force.

As fish floats in the water, mind also floats in the sea of sense objects. Mind always moves from one sense object to the other and due to its constant movement it loses its powers. So far the channelization of mental powers, according to the Tantra, mind should be entrapped by the net of Sādhana.*

The another subtle meaning of Matsya is prana or vital force. Vayu (air) is the gross form of it. As has been explained in the

Heaths yoga pradipika, mind and prāna follow one another. By controlling the one, another can automatically be controlled.* So here like mind, prāna is also considered as fish. But how Tantra considers prana as fish one may wish to know.

According to the Tantra, though prana pervades in the entire body; we breath, which is the grossform of prāna through right and left nostrils which in terms of Tantra known as Pingala, the sun and Idā, the moon respectively. In the Yougic terms, life span depends upon the amount of Prāna consumed through respiration. The more amount of it we utilize, we can enjoy more life or longevity. Prāna floats either in Pinglā or in Idā which we feel it in the form of respiration. So to minimize the amount of respiration or in other words to enjoy longevity one has to control the prana, which moves like a fish in Idā and pingla.

From this we can conclusively say that the Tāntric meaning of Matsya is totally different from the gross one.

iv. Mudrā—Grain:

Mudrā means grain or cooked food. The root verb of Mudrā is mud means to please.⁶⁷ We eat food for the sustenance of life without which our body can not persist. Food nourishes body and with the result body becomes healthy and with healthy body, we enjoy all pleasures.

Tantra has not taken only the gross meaning of Mudrā. According to it, in the realm of Sādhana, the spiritual body of a Sādhaka should be strengthened by the spiritual food like Jñāna Vairagya, Tapa etc. The Tantra tattava prakāsa has mentioned eight types of Mudra or grain like desire, greed, anger, greed anger, lust etc..., which should be cooked or sublimated into the fire of Brahman.⁶⁸ This is the real food of Sādhaka by which he sustains his spiritual life. So this is the Tāntric meaning of Mudrā.

Mudrā also is a part of Tantra Sādhana and there it is a means for identifying spiritually various parts of the body with cosmic force or energy. So in Tantra, Mudra is not merely a cooked food but it also contains spiritual meaning.

v. Maithuna- Copulation:

Maithuna indicates copulation. Copulation is an union of male

and female; the opposite poles required to be brought together for the purpose of creation by nature.

Tantra has presented the subtle meaning of creation, that is, spiritual creation for which two opposite poles are required. These two poles are Siva and Sakti. Siva resides at the Sahasrara (brain) while Sakti at the Mûlâdhâra Cakra (pelvic region). In between these two there are six centres of energy around the spinal cord. The energy which resides at the Mûlâdhâra Cakra awakens and penetrates all the centres and unites with Siva at the Sahasrâra Cakra. This is the real Tântic maithuna or copulation which occurs in the Sâdhka.⁶⁹

So it is not a gross maithuna or copulation taking place between two physical bodies but it is a spiritual communion with Siva and Sakti which gives birth or transforms the whole personality of a Sadhaka.

With the help of Tântic treatise, we have tried to see the correct meaning of Tantra symbols. Tantric way of Sadhana is so effective which gives quick results. So to avoid misuse of it, this system is armoured in the symbolic terminology. So symbols are designed to maintain its secrecy. But due to lack of its proper knowledge, a distortion takes place into the Tantra system.

We could see from the description, of the symbol that there is a World-wide difference between a gross meaning and a Tântic meaning. The symbols like linga, Ardhanârisvara, Maithuna etc. are largely distorted because of their relevance with sex notion. We consider sex as a cause degeneration but as the Kûârînava says that which brings about degeneration can as well be a means for sublimation.⁷⁰ Thus the subtle meaning of symbol is enough to decide its soundness.

Conclusion:

Body is the only means for achieving any goal. Disease proves to be obstacle in the path of gaining the goal. Tantra is a Sâdhanâ, system. In the way of Sâdhanâ, Sâdhaka has to face many physical disorders and mental disturbances. Tantra has not over looked this fact. To come out from this, it has mentioned certain proc-

esses which are designed for strengthening body mind complex and thereby fortifying the instrument for achieving all goals physical as well as supra physical.

If we glance over the content of the first chapter with a view to examine the therapeutic aspect of it, will be found highly significant. The very definition of Tantra reflects its therapeutic aspect. As we have seen, one of the meaning of Tantra according to the Sabdakalpadrūma is medicine (ousadhi). The other meaning liberation is also deal with this aspect. It liberates Sādhaka from the physical and mental ailments. How Tantra does this that we have already indicated as and when we have found an opportunity. Still however by way of stating the investigations we have found clearly, we would like to recapitulated briefly as follows:

Tantra does this by two ways: One by the cultivation of strong will power and second, by the utilization of pāraḍ or mercury and its preparations.

As has been accepted, generally everybody has got its own medicine, that is, its power of inbuilt resistance against attacks from disease. This can be further cultivated by the cultivation of strong willpower. From the principles of Tantra we could see that, Tantra Sādhana is nothing but the awakening of inner powers of senses, body and mind. Willpower is the key of all powers. With the cultivation of it, one can open doors to the other latent powers. The power of resistance against diseases is also included within it.

Tantra also does this same job by the utilization of mercury (pāraḍa) and its preparations. Mercury is considered as highly medicinal metal. But it can not be used in a natural form because of its poisonous nature. Tāntric seers have found out this fact five thousand years back and also worked out the process (Samskāra) to make mercury fit for medicinal use.

Lord Siva is considered as the originator of this process of alchemy who is also the reveller of Tantra. With the help of these two only a Hatha yogi or a Tāntric Sādhaka survived on the snowy summits of mountains without having any antibiotic drugs. This is but the physical side of Tāntric way of dealing with bodily ail-

ments. We now turn to its mental side.

Symbol and their therapeutic value:

As is the case with Pàrada or mercury in strengthening body so also, Tantra has a distinct medicine for mental ailments. And it is surprising to note that Tantra uses psychological symbols or linguistical alphabets as symbols for curing the mental diseases by cultivating inner potent mental powers.

Symbols are also highly significant in this regards in lying stress on mental aspect. Mind plays prominent role in mental and physical diseases. Mental disturbances are expressed sometimes in a physical disorders or physical disturbance sometimes makes mind weak. Thus all our diseases are psycho-somatic. Being a subtler than body, mind's effect on body is felt more powerful. Tantra has recognized this fact much earlier than we started talking about psycho-somatic aspect of disease.

The Tàntrics prescribe the use of symbol for making mind calm and positive by concentrating it on syllables or figures of particular types. It is undisturbed and concentrated mind which is a source of creative imagination or all the creativity of mind. Tàntric Sàdhanà is based on imagination. Sàdhaka has to positively think that he is offering this or that object. This positive thinking also helps as therapy if the mind is diseased. The theory of auto-suggestion in psychology is highly related with this aspect. In the process of auto-suggestion patient gives strong suggestion or he imagines himself quite healthy very powerfully. This process gives relief to patient and gradually helps in curing himself from diseases. Tàntric Sàdhanà through symbols strengthens the positive powers of imaginations which Sàdhaka can utilize as a therapy for himself and also can be used as therapeutic means for curing others.

Chapter-2

The Six Systems of Yoga

The Six Systems of Yoga

Chapter 2

Chapter-2

Sankhya and Yoga, Mimamsa and Vedanta, Vaisesika and Nyāya, the six classic systems, philosophies, or more literally "points of view" (*darsanas*; from the root *drs*, "to see"), are regarded as the six aspects of a single orthodox tradition. Though apparently and even overtly contradictory, they are understood to be complementary projections of the one truth on various planes of consciousness, valid intuitions from differing points of view-like the experiences of the seven blind men feeling the elephant, in the popular Buddhist fable. The founders, actual or supposed - Kapila, Patañjali, Jaimini, Vyāsa, Gautama, and Kanāda-should probably be regarded rather as schools than as individuals. Nothing is known of them but their names. Their sūtras stand at the beginning of a copious literature of commentators, yet are themselves but the last terms of a long foregoing period of discussion, each of them including arguments against all the others. Moreover, without the commentaries the texts would be unintelligible: they are not the self-sufficient works of independent thinkers, but mnemonic "threads" (*sūtras*) for the guidance of oral teaching in the ancient Indian style of the guru and his *adhikārin*.¹

SĀNKHYA and YOGA have been discussed *supra*, pp. 280-332. They treat of the hierarchy of the principles (*tattvas*) that proceed from the effects of *purusa* in *prakṛti* and support the experiences of dream and waking consciousness.

The MIMĀMSA and VEDĀNTA likewise belong together, both representing the point of view of the "Fourth" (*turiya*) that transcendent nondual principle (*brahman*) which is beyond the province of the world-supporting dual (*purusa-prakṛti*). The Vedānta has been discussed, *supra*, pp. 409-463, as the final truth or "end" (*anta*) of the Vedas; the Mimāṃsā is concerned with a clarification of the liturgical aspect of the same sacred books. Indeed, the term *mimamsa*-meaning, literally, "deep thought, consideration, reflection, exposition," and when applied to philoso-

phy, "reflection on, or exposition of, the Vedas"-properly is applied to both of these philosophies: respectively, as 1. *Pūrva-mimāṣā* ("the first reflection; exposition of the first part [of the Vedas]") or *karma-mimāṣā* ("the study of [ritual] action") and 2. *uttara-mimāṣā* ("the second reflection; exposition of the second part [of the Vedas]") or *brahma-mimāṣā* ("the contemplation of Brahman").

Pūrva-mimāṣā, *Karma-mimāṣā*, or more usually simply the *Mimāṣā*, is a kind of scholastic, priestly science, which defines the orthodox patterns of Brāhmanic liturgical life. These inherited patterns are not always clearly designated in the Vedas themselves; hence already in the later Brāhmanas² the term *mimāṣā* occurs, where it already denotes a discussion of some point of ritual practice. During the following centuries, with the proliferation of variant priestly readings, the demand for this science of definitive reasoning must have increased. Somewhere between 200 and 450 A.D.- that is to say, about the time of the crystallization of the Vedānta-its findings were summarized in the *Pūrvamimāṣā-sūtra* of Jaimini; but this basic textbook presupposes a long history of argument. "There is evidence," states A.B. Keith, "that the science was in full vogue as early as the middle of the third century B.C."³

The method of the *Pūrvamimāṣā-sūtra* resembles somewhat that of Thomas Aquinas' scholastic *Summa Theologica*. Its elementary unit, or subdivision, is the *adhikarana* ("heading"), which falls into five parts: first, a proposition is formulated; next, the doubt as to its correctness is refuted; third, the erroneous methods of treating it are exhibited; fourth, these are refuted; and finally, the true solution is presented as the inevitable conclusion of the entire discussion.⁴ For example, in *Sūtra*, I two propositions are presented: 1. that Vedic study is obligatory for the upper castes; and 2. that Dharma is a proper subject for study. The first proposition is found to be self-evident in the Vedic precepts, "One should study the Veda" and "One should perform the ritual of the final bath after studying the Veda." A doubt arises, however, with respect to the second proposition, since it may be asked whether one should perform the ritual of the bath immediately after learning the Vedas, and so terminate one's period of studentship.

The *prima facie* view is that the bath should immediately follow the learning of the Veda. The reply is that the real study of the Veda is not satisfied by a mere reading of the text. The true conclusion, consequently, is that the final bath should be postponed until a study of Dharma has brought the student's understanding of the Veda to a state of perfection. Jaimini's volume contains some nine hundred and fifteen of these *adhikaranas*, organized in twelve books.⁵

The *Mimāṃsā darsana* supports a theory of the infallibility of the Vedas and a theory of meaning as inherent in sound: Sanskrit, the holy language of the Vedas, that is to say, is not a historical tongue based on convention, but an emanation of Being (*sat*) in sound (*śabda*); hence the power of the sacred mantras and of the Vedic hymns to touch the quick of truth and so the work magic. It is from this potency that the effects of the sacrifice are derived, not from divine intervention; for though the offerings are addressed to deities, the deities are themselves supported by the power of the sacrifice. "The *Mimāṃsā*," writes Garbe, "does not recognize the existence of God. Nevertheless this fact interferes as little here as in the Sankhya and the other systems with the belief in the supernatural beings of the popular Indian faith."⁶ Also rejected is the idea of the periodic creation and dissolution of all things. There is a constant process of becoming and passing away, but no ground for the systematization of this process in terms of cycles of evolution and involution.⁷ Moreover, arguing specifically against the *sunyavāda* of the Mahayana, the *Mimāṃsā* doctrine of knowledge affirms the world as real.⁸ This *darsana* stands in close relationship to Indian law, since its chief object is "to determine injunctions, which are distinct from those of civil law mainly in the fact that they deal with sacrificial rather than civil obligations, and are enforced by spiritual rather than temporal penalties."⁹

VAISESIKA and NYĀYA, cosmology and logic, the remaining brace of the six philosophies, treat of the data of waking consciousness from the point of view of waking consciousness itself, and are consequently closer in spirit and character than the other Indian *darsanas* to the academic tradition of the West.

The legendary founder of the Vaisesika, Kanada (also known as Kanabhaksa and Kanabhuj, all three names meaning "atom eater"), is supposed to have flourished c. 200-400 A.D.¹⁰ His textbook, the *Vāisesika-sūtra* ("the sutras, or precepts, showing the differences, distinctive characteristics, or manifest nature, of individual things"), distinguishes in nature five categories (*padārthas*): 1. substance (*dravya*), comprising earth, water, fire, air, ether, time, space, soul (*ātman*),¹¹ and mind (*manas*); 2. quality (*guṇa*), comprising color, taste, smell, touch (with temperature), number, extension individuality, connection, separation, priority, posterity, knowledge, joy, pain, desire, aversion, and will;¹² 3. movement and action (*karma*); 4. association (*sāmānya*); 5. difference (*viśeṣa*); and 6. inherence (*samavaya*).¹³ The Vaisesika derives its name from category 5, *viśeṣa*, "difference," because it is an atomistic doctrine (whence the nicknames of its legendary founder). The atoms of the several substances have no extension, yet in combination become extensive and visible. During the periods of world dissolution between the cosmogonic cycles, they are not combined; hence there is then no visible world. The souls, nevertheless, retain their merit and demerit, and in consequence unite, presently, with the various atoms. This renews the movement of the atoms and begins a new cycle of creation. The continuous wanderings and activities of the souls in the manifest world ultimately fatigue them, and so a night, a cosmic night of dissolution, is necessary for their refreshment. The unions of the atoms dissolve, and the universe disappears.

"Both souls and the organ of thought are eternal substances," writes Garbe, describing the psychology peculiar to this system; "but the soul is all-pervading, *i.e.*, not bound down to time and space, while the organ of thought is an atom. The latter is the intermediary between the soul and the senses, since urged by the soul it betakes itself on each occasion to that sense through which the soul desires to perceive or to act.... If it rests motionless in the soul, the union of the latter with the senses ends, and no perception or act or experience is possible... If the organ of thought were omnipresent like the soul, or if the soul could enter into immediate relation with the objects of knowledge, all objects

would be simultaneously perceived. As the organ of thought, on the one hand, imparts the quickening power to the soul, so, on the other, it acts as a kind of check by preventing the soul from exercising more than one function at the same time."¹⁴

Nyaya, logic, the sixth of the classical systems, is attributed to a shadowy figure, Gautama-nicknamed Aksapāda, "the foot-eyed," that is to say, "with his eyes fixed on his feet" -whose textbook, the *Nyaya-sūtra*, composed perhaps as early as 150 B.C.,¹⁵ but more probably between 200 and 450 A.D.,¹⁶ parallels the Vaisesika in its atomic doctrine, cosmology, and psychology, but is devoted principally to the science of logic. Four sources of true knowledge are recognized: 1. perception (*pratyakṣa*), 2. inference (*anumāna*), 3. analogy (*upamāna*), and 4. credible testimony (*śabda*). Inference, the sole reliable means to philosophical knowledge, is of three kinds: 1. inference from cause to effect (*pūrvavat*), 2. inference from effect to cause (*śesavat*), and 3. reasoning from perception to abstract principle (*sāmānyato drṣṭa*). Three kinds of cause are recognized: 1. the material or inhering cause (*upādāna-kāraṇa*, *samavāyi-kāraṇa*), e.g., in the case of a carpet, its threads; 2. the noninhering or formal cause (*asamavāyi-kāraṇa*), in the case of the carpet, the arrangement and knotting of its threads; and 3. the effective or instrumental cause (*nimitta-kāraṇa*): the weaver's tools. The syllogism of the Nyāya darsana comprises five members: 1. the proposition (*pratijñā*), e.g., there is a fire on the mountain; 2. the cause (*hetu*), for the mountain smokes; 3. the exemplification (*drṣṭānta*), wherever there is smoke there is fire, as, for example, on the hearth in the kitchen; 4. the recapitulation of the cause (*upanaya*), the mountain smokes; and 5. the conclusion (*nigamana*), therefore there is fire on the mountain. "The conception," writes Garbe, "on which the theory of the syllogism of the Nyāya rests bears the name of 'invariable association' (*vyāpti*). Instead of starting as we do with an affirmative proposition, universally valid - 'All smoke presumes the existence of fire' -the Nyāya philosophy asserts the 'invariable association' of smoke with fire. The sign observed (*liṅgin*) - in this instance the smoke - is 'invariably associated' (*vyāpya*); the vehicle of the sign which is to be inferred (*liṅgin*) -

in this instance the fire - is the 'invariable associate' (*vyāpaka*).¹⁷ Rene Guenon points out, however, that abridged forms of this syllogism are used, in which either the first three terms or the last three may appear alone, and that the latter abridgment resembles the syllogism of Aristotle.¹⁸

Book I of the Nyāya-sūtra defines the topics, or categories, to be discussed in the volume; Book II deals with doubt, the four means of proof and their validity, and shows that there are no other valid means of demonstration; Book III discusses the self, the body, the senses and their objects, cognition, and the mind; Book IV disposes of volition, fault, transmigration, the good and evil fruits of human action, pain, and final liberation; then passes to the theory of error and of the whole and its parts; Book V deals with unreal objections (*jāti*) and occasions for the rebuke of an opponent (*nigrahassthāna*).¹⁹

"When," observes Garbe, "the Vaisesika and Nyāya systems came to be blended together, the combined school adopted theistic views, but never saw in the personal God, whom they assumed, the creator of matter. Their theology is set forth in the *Kusumāñjali* of Udayana [c. 950 A.D.],²⁰ and in various later works which discuss the two systems in common. According to the view which they hold in harmony with the doctrine of the Yoga, God is a distinct soul like the other individual souls, and these are equally with Him eternal. He is, however, distinguished from them by the fact that He alone possesses the attributes of omniscience and omnipotence, which qualify Him for the government of the universe; and that, on the other hand, He lacks those attributes which result in the entanglement of all other souls in the cycle of existence."²¹

The ideal of liberation presented in Gautama's *Nyāya-sūtra*, Book IV, is that of ascetic detachment, culminating in a condition of absolute unconsciousness, similar to that of the Sāṅkhya, as described *supra*, P. 329-330. This suggests that in these apparently later doctrines we may have another vestige of the archaic pre-Aryan science represented in Jainism and the doctrine of Gosāla *supra*, pp. 263-279). Indeed, in late Jaina text (the *Avasyaka*), the Vaisesika is attributed to a Jaina schismatic

named Rahagutta.²²

The "six systems" are considered to be orthodox because they recognize the authority of the Vedas; their co-ordination, however, is not particularly old. Vācaspati-misra, c. 841 A.D., composed commentaries on the Sāṅkhya, a Yoga, Mīmāṃsā, Vedānta, and Nyāya systems, while of Udayana, about a century later, combined the views of the Nyāya and Vaiśeṣika in his proof of the existence of God. The culmination of the tendency to syncretize appears in śivāditya (data uncertain, but probably later than Udayana), who, though perhaps not the first to amalgamate the darsanas in exposition, must be reckoned the earliest of the authorities of the joint school.²³

The "six systems," however, never attained the position of an exclusive, dogmatic orthodoxy. The *Sarvādarsanāsiddhānta-sāāṅgraha* ("Epitome of the Doctrines of All the Darsanas"), a tenth- or eleventh-century textbook from the school of Saṅkara, delineates, with adequate objectivity, the views of the Lokāyatikas (materialists),²⁴ Jāinas, Buddhists (Mādhyamikas, Yogācāras, Sautrantikas, and Vaibhāsikas), Vaiśeṣika, Nyāya, Pūrva-mīmāṃsā (in two schools: that of Prabhakara and that of Kumarila),²⁵ Sāṅkhya, and Yoga, the philosophy of Vedāvyāsa,²⁶ and the Vedānta of saṅkara.²⁷ Madhava, an eminent fourteenth-century Vedāntist of the school of saṅkara, delineates likewise in his *Sarvadarśanāsaṅgraha* ("Epitome of All Systems")²⁸ sixteen philosophies, adding to the above the Vedānta of Rāmānuja, the doctrines of a number of soviet Sivaite sects, and Pāṇini's treatment of the laws of the metaphysical, eternal, and magical language of the Vedas in his Sanskrit Grammar.²⁹

In the final analysis, the orthodoxy of the India has never been grounded in a college or academy. Neither can it be defined by any numbering of views. For its life is in the mokṣa of the actual sages: such, for example, as Rāmakṛṣṇa (1836-86) in our the nineteenth century and Rāmāṇa (1879-1950) in our own.³⁰ These "wild geese" (hamsas), teaching numerously in every part of the land of the Bharatas, have renewed the ineffable message perennially, in variable terms, which philosophers classify and adhikarins transcend.

24. Lokāyata, literally, "belonging to the world of sense," is the name given to a materialistic system said to have been founded by the sophist Cārvāka (date, of course, unknown). "There are clear indications," states Garbe, "of the presence in India, as early as pre-Buddhist times, of teachers of a pure materialism; and undoubtedly these theories have had numerous adherents in India from that period onwards to the present day... The Lokāyata allows only perception as a means of knowledge, and rejects inference. It recognizes as the sole reality the four elements, i.e., matter, and teaches that, when a body is formed by the combination of the elements, the spirit also comes into existence, just like the intoxicating quality with the mixture of special materials. With the destruction of the body the spirit returns again into nothingness... The postoperative force of merit and demerit, which, according to the belief of all the other Indian schools, determines the lot of each individual down to the smallest details, has no existence for the Lokāyatika, because this conception is reached only by inference... On the practical side this system exhibits itself as the crudest Eudaemonism; for it represents the gratification of the sense as the sole desirable good.... The Vedas are declared to be the idle prating of knaves, characterized by the three faults of untruthfulness, internal contradiction, and useless repetition... The ritual of the Brahmins is a fraud, and the costly and laborious sacrifices are useful only for providing with a livelihood the cunning fellows who carry them out" (Garbe, *Lokāyata*, in Hastings, *op. cit.*, Vol. VIII, p. 138). None of the writings of this school are extant; all that we know of them has been gathered from the writings of their opponents. Cf. F. Max Muller, *Six Systems of Indian Philosophy*, London, 1899, pp. 86, 94ff.
25. A sharp divergence in the unity of the Mimāṃsā-darsana begins with the appearance of these two scholastics, c. 700 A.D. Cf. Keith, *The Karma-Mimāṃsā*, p. 9.

Chapter-3

Tantra and Nirvan

Chapter 3
Tactics and Methods

Chapter-3

1

Who Seeks Nirvāna ?

THE LATER Buddhist change of attitude toward the final goal is paralleled exactly by the contemporary Hindu development. As we have seen,¹ in Hinayāna usage the term *bodhisattva* denoted a great being on the point of becoming a Buddha and so passing from time to nirvāna, an archetype of the Buddhist lay-initiate escaping from the world, whereas in the Māhāyāna the concept was translated into a time-reaffirming symbol of universal saviorship. Through renouncing Buddhahood the Bodhisattva made it clear that the task of moksa, "release, liberation, redemption from the vicissitudes of time," was not the highest good; in fact, that moksa is finally meaningless, samsāra and nirvāna being equally of the nature of sūnyatā, "emptiness, the void." In the same spirit the Hindu Tāntric initiate exclaims: "Who seeks nirvāna ?" "What is gained by moksa ?" "Water mingles with water."

This point of view is rendered in many of the conversations of Śrī Rāmakrishna with his lay disciples.

"Once upon a time," he told them one evening, "a sannyāsin entered the temple of Jagganāth. As he looked at the holy image he debated within himself whether God had a form or was formless. He passed his staff from left to right to feel whether it touched the image. The staff touched nothing. He understood that there was no image before him; he concluded that God was formless. Next he passed the staff from right to left. It touched the image. The sannyāsin understood that God had form. Thus he realized that God has form and, again, is formless."²

"What is vijñāna ?" he said on another occasion. "It is knowing God in a special way. The awareness and conviction that fire exists in wood is jñāna, knowledge. But to cook rice on that fire, eat the rice, and get nourishment from it is vijñana. To know by one's inner experience that God exists is jñāna. But to talk to

Him, to enjoy Him as Child, as Friend, as Master, as Beloved, is vijñāna. The realization that God alone has become the universe and all living beings is vijñāna."³

And with respect to the ideal of becoming annihilate in Brahman, he would sometimes say, quoting the poet Rām-prasād, "I love to eat sugar, I do not want to become sugar."^{3a}

The Mahāyāna Bodhisattva tastes unending saviorship by devoting himself with absolute selflessness to his teaching task in the vortex of the world; in the same spirit, the Hindu Tāntric initiate, by persevering in the dualistic attitude of devotion (*bhakti*), enjoys without cease the beatitude of the knowledge of the omnipresence of the Goddess.

"The Divine Mother revealed to me in the Kālī temple that it was She who had become everything," Śrī Rāmakrishna told his friends. "She showed me that everything was full of Consciousness. The Image was Consciousness, the altar was Consciousness, the water-vessels were Consciousness, the doorsill was Consciousness, the marble floor was Consciousness- all was Consciousness. I found everything inside the room soaked, as it were, in Bliss-the Bliss of Satcidānanda.⁴ I saw a wicked man in front of the Kālī temple; but in him also I saw the Power of the Divine Mother vibrating. That was why I fed a cat with the food that was to be offered to the Divine Mother."⁵

"The jñāni, sticking to the path of knowledge," he explained again, "always reasons about the Reality, saying, 'Not this, not this.' Brahman is neither 'this' nor 'that'; It is neither the universe nor its living beings. Reasoning in this way, the mind becomes steady. Then it disappears and the aspirant goes into samadhi. This is the Knowledge of Brahman. It is the unwavering conviction of the jñāni that Brahman alone is real and the world illusory, like a dream. What Brahman is cannot be described. One cannot even say that Brahman is a Person. This is the opinion of the jñānis, the followers of Vedānta philosophy.

"But the bhaktas accept all the states of consciousness. They take the waking state to be real also. They don't think the world to be illusory, like a dream. They say that the universe is a māni-

festation of God's power and glory. God has created all these-sky, stars, moon, sun, mountains, ocean, men, animals. They constitute His glory. He is within us, in our hearts. Again, He is outside. The most advanced devotees say that He Himself has become all this-the twenty-four cosmic principles, the universe, and all living beings. The dev-otee of God wants to eat sugar, not to become sugar. (*All laugh.*)

"Do you know how the lover of God feels ?" Rāmākrishna continued. "His attitude is 'O God, Thou art the Master, and I am Thy servant. Thou art the Mother, and I am Thy child.' Or again: 'Thou art my Father and Mother. Thou art the Whole, and I am a part.' He doesn't like to say, 'I am Brahman.'

"The yogi seeks to realize the Paramātman, the Supreme Soul. His idea is the union of the embodied soul and the Supreme Soul. He withdraws his mind from sense-objects and rites to concentrate it on the Paramātman. Therefore, during the first stage of his spiritual discipline, he retires into solitude and with undivided attention practices meditation in a fixed posture.

"But the Reality is one and the same. The difference is only in name. He who is Brahman is verily Ātman, and again, He is the Bhagavan, the Blessed Lord. He is Brahman to the followers of the path of knowledge, Paramatman to the yogis, and Bhagavan to the lovers of God.

"The jñānis, who adhere to the nondualistic philosophy of Vedānta, say that the acts of creation, preservation, and destruction, the universe itself and all its living beings, are the manifestations of Sakti, the Divine power.⁶ If you reason it out, you will realize that all these are as illusory as a dream. Brahman alone is the Reality, and all else is unreal. Even this very Sakti is unsubstantial, like a dream.

"But though you reason all your life, unless you are established in samādhi, you cannot go beyond the jurisdiction of Sakti. Even when you say, 'I am meditating,' or 'I am contemplating,' still you are moving in the realm of Sakti, within Its power.

"Thus Brahman and Sakti are identical. If you accept the one, you must accept the other. It is like fire and its power to burn. If

you see the fire, you must recognize its power to burn also. You cannot think of fire without its power to burn, nor can you think of the power to burn without fire. You cannot conceive of the sun's rays without the sun, nor can you conceive of the sun without its rays.

"What is milk like ? Oh, you say, it is something white. You cannot think of the milk without the whiteness, and again, you cannot think of the whiteness without the milk.

"Thus one cannot think of Brahman without Sakti, or of Sakti without Brahman. One cannot think of the Absolute without the Relative, or of the Relative without the Absolute.

"The Primordial Power is ever at play.⁷ She is creating, preserving, and destroying in play, as it were. This Power is called Kālī. Kālī is verily Brahman, and Brahman is verily Kālī. It is one and the same Reality. When we think of it as inactive, that is to say, not engaged in the acts of creation, preservation, and destruction, then we call It Brahman. But when It engages in these activities, then we call it Kālī or Sakti. The Reality is one and the same; the difference is in name and form."⁸

This introductory exposition of the Tāntric point of view was given on the deck of a little excursion-steamer, sailing up and down the Ganges, one beautiful autumn afternoon in 1882. Keshab Chandra Sen (1838-84), the distinguished leader of the semi-Hindu, semi-Christian Brahmo Samāj,⁹ had come, with a number of his following, to visit Sri Rāmakrishna at Dakshineswar, a suburb of the modern city of Calcutta, where the saintly teacher was serving as priest in a temple dedicated to the Black Goddess, Kālī. Keshab was a modern, occidentalized Hindu gentleman, with a cosmopolitan outlook, and a sāt̥tvic, humanistic, progressive religious philosophy—not unlike that of his New England contemporary, the Transcendentalist (and student of the *Bhagavad Gītā*), Ralph Waldo Emerson. Rāmakrishna, on the other hand, was a thorough Hindu-intentionally ignorant of English, nurtured in the traditions of his motherland, long-practiced in the techniques of introverted contemplation, and filled with the experience of God. The coming together of these two religious leaders was a meet-

ing of the modern, timely India and the timeless-the modern consciousness of India with the half-forgotten divine symbols of its own unconscious. Noteworthy, moreover, is the fact that on this occasion the teacher was not the Western-educated, tailored gentleman, who had been entertained in London by the Queen, but the yogi in his loincloth, speaking of the traditional Indian Gods out of his own direct experience.

KESHAB (*with a smile*): "Describe to us, sir, in how many ways Kālī, the Divine Mother, sports in this world."

SRI RĀMAKRISHNA (*also with a smile*): "Oh, She plays in different ways. It is She alone who is known as Mahā-Kālī ["The Great Black One"], Nitya-Kālī ["The Everlasting Black One"], Smaśāna-Kālī ["Kālī of the Cremation Ground"], Raksā-Kālī ["Goblin Kālī"], and Syāmā-Kālī ["Dark Kālī"]. Mahā-Kālī and Nitya-Kālī are mentioned in the Tantra Philosophy. When there were neither the creation, nor the sun, the moon, the planets, and the earth, and when darkness was enveloped in darkness, then the Mother, the Formless One, Mahā-kālī, the Great Power, was one with Mahā-Kālī [this is the masculine form of the same name], the Absolute.

"Syāmā-Kālī has a somewhat tender aspect and is worshiped in the Hindu households. She is the Dispenser of boons and the Dispeller of fear. People worship Raksā-Kālī, the Protects, in times of epidemic, famine, earthquake, drought, and flood. Smaśāna-Kālī is the embodiment of the power of destruction. She resides in the cremation ground, surrounded by corpses, jackals, and terrible female spirits. From Her mouth flows a stream of blood, from Her neck hangs a garland of human heads, and around Her waist is a girdle made of human hands.

"After the destruction of the universe, at the end of a great cycle, the Divine Mother garners the seeds for the next creation. She is like the elderly mistress of the house, who has a hotch-potch-pot in which she keeps different articles for the household use. (*All laugh*), Oh, yes ! Housewives have pots like that, where they keep sea-foam, blue pills, small bundles of seeds of cucumber, pumpkin, and gourd, and so on. They take them out when they want them. In the same way, after the destruction of

the universe, my Divine Mother, the Embodiment of Brahman, gathers together the seeds for the next creation. After the creation the Primal Power dwells in the universe itself. She brings forth this phenomenal world and then pervades it. In the Vedas creation is likened to the spider and its web. The spider brings the web out of itself and then remains in it. God is the container of the universe and also what is contained in it.

"Is Kālī, my Divine Mother, of a black complexion ? She appears black because She is viewed from a distance; but when intimately known She is no longer so. The sky appears blue at a distance; but look at air close by and you will find that it has no color. The water of the ocean looks blue at a distance, but when you go near and take it in your hand, you find that it is colorless."

Sri Rāmākṛishṇa, filled with love for the Goddess, then sang to her two songs of the Bengali devotee and yogi Rāmpṛasād, after which he resumed his talk.

"The Divine Mother is always sportive and playful. This universe is Her play. She is self-willed and must always have her own way. She is full of bliss. She gives freedom to one out of a hundred thousand."

A BRĀHMO DEVOTEE: "But, sir, if She likes She can give freedom to all. Why, then, has She kept us bound to the world ?"

SRI RĀMAKRISHNA: "That is Her will. She wants to continue playing with Her created beings. In a game of hide-and-seek the running about soon stops if in the beginning all the players touch the 'granny'. If all touch her, then how can the game go on? That displeases her. Her pleasure is in continuing the game.

"It is as if the Divine Mother said to the human mind in confidence, with a sign from Her eye, 'Go and enjoy the world.' How can one blame the mind ? The mind can disentangle itself from worldliness if, through her grace, She makes it turn toward Herself."

Singing again the songs of Rāmpṛasād, Sri Rāmākṛishṇa interrupted his discourse, but then continued. "Bondage is of the mind, and freedom is also of the mind. A man is free if he con-

stantly thinks: 'I am a free soul. How can I be bound, whether I live in the world or in the forest? I am a child of God, the King of Kings. Who can bind me?' If bitten by a snake, a man may get rid of its venom by saying emphatically, 'There is no poison in me.' In the same way, by repeating with grit and determination, 'I am not bound, I am free,' one really becomes so—one really becomes free.

"One someone gave me a book of the Christians. I asked him to read it to me. It talked about nothing but sin. (*To Keshab Chandra Sen:*) Sin is the only thing one hears of at your Brahmo Samāj, too. The wretch who constantly says, 'I am bound, I am bound,' only succeeds in being bound. He who says day and night, 'I am a sinner, I am a sinner,' really becomes a sinner.

"One should have such burning faith in god that one can say: 'What? I have repeated the name of God, and can sin still cling to me? How can I be a sinner any more? How can I be in bondage any more?

"If a man repeats the name of God, his body, mind, and everything become pure. Why should one talk about sin and hell, and such things? Say but once, 'O Lord, I have undoubtedly done wicked things, but I won't repeat them.' And have faith in his name."

Sri Rāmākṛishṇa sang:

If only I can pass away repeating Durgā's name;
How canst Thou then, O Blessed One,
Withhold from me deliverance,
Wretched though I may be?

Then he said: "To my Divine Mother I prayed only for pure love, I offered flowers at Her Lotus Feet and prayed to Her: 'Mother, here is Thy virtue, here is Thy vice. Take them both and grant me only pure love for Thee. Here is Thy knowledge, here is Thy ignorance. Take them both and grant me only pure love for Thee. Here is Thy purity, here is Thy impurity. Take them both, Mother, and grant me only pure love for Thee. Here is Thy dharma, here is Thy adharma. Take them both, Mother, and grant me only

pure love for Thee."¹⁰

In Tantra the theistic attitude practically obliterates the abstract ideal of the Formless Brahman (*nirguna brahman*) in favor of Brahman-in-the-Gunas (*saguna brahman*) - the Lord (*īśvara*), the personal God; and the latter is represented by the Tantrics preferably in the female aspect, since in this the nature of Māyā-Sakti is most immediately affirmed.¹¹ The Tāntric development supported the return to power in popular Hinduism of the figure of the Mother Goddess of the innumerable names- Devī, Durgā, Kālī, Pārvatī, Umā, Sati, Padmā, Candī, Tripura-sundārī, etc.-whose cult, rooted in the Neolithic past, had been overshadowed for a period of about a thousand years by the male divinities of the patriarchal Āryan pantheon. The Goddess began to reassert herself in the period of the later Upanisads.¹² She is today the chief divinity again. All the consorts of the various gods are her manifestations, and, as the sakti or "power" of their husbands, represent the energy that has brought the latter into manifestation. Moreover, as Mahāmāyā, the Goddess personifies the World Illusion, within the bounds and thrall of which exist all forms whatsoever, whether gross or subtle, earthly or angelic, even those of the highest gods. She is the primary embodiment of the transcendent principle, and as such the mother of all names and forms. "God Himself," states Ramakrishna, "is Mahāmāyā, who deludes the world with Her illusion and conjures up the magic of creation, preservation, and destruction. She has spread this veil of ignorance before our eyes. We can go into the inner chamber only when She lets us pass through the door."¹³ It is entirely possible that in this reinstatement of the Goddess, both in the popular cults and in the deep philosophy of the Tantra, we have another sign of the resurgence of the religiosity of the non-Āryan, pre-Āryan, matriarchal tradition of Dravidian times.

The Tāntric movement differs from Jainism and Buddhism, however, inasmuch as it adheres to the authority of the Vedas, seeking rather to assimilate and adjust itself to the orthodox tradition than to exclude and refute it. In this it parallels the pattern of popular Hinduism. Indeed, the mixture of Tāntric and Vedāntic traits in modern Hindu life, ritual, and thought is so intimate that

they present themselves as an organic whole. The Tantrics speak of their texts as "The Fifth Veda," "The Veda for This Iron Age." "For the first of the four world ages, *sruti* (Veda) was given; for the second, *smṛti* (the teachings of the sages, Dharamasastra, etc.), for the third, *purāṇa* (the epics, etc.), and for the fourth, *āgama* (the Tantric texts)."¹⁴

As has been pointed out by Sir John Woodroffe, whose studies are the most important examinations of the Tantra published in modern times: "The Śākta followers of the Āgama claim that its Tantras [i.e., "books"] contain the very core of the Veda...As men have no longer the capacity, longevity and moral strength required to carry out the Vaidika Karma-kanda [the ritual section of the Veda], the Tantra Śāstra prescribes a Śādhana [religious discipline] of its own for the attainment of the common end of all Śāstra, that is, a happy life on earth, Heaven thereafter, and at length Liberation."¹⁵

Both the Tantra and popular Hinduism accept the truth of Advaita Vedānta but shift the accent to the positive aspect of māyā. The world is the unending manifestation of the dynamic aspect of the divine, and as such should not be devaluated and discarded as suffering and imperfection, but celebrated, penetrated by enlightening insight, and experienced with understanding. The hair of the Goddess is dishevelled in her frantic, self-maddened dance which produces the mirage of saṃsāra, but the perfect devotee is not thereby dismayed. "Though the mother beat him," says Rāmprasād, "the child cries 'Mother' ! O Mother," and clings still tighter to her garment."¹⁶ The Vedāntic yogi never tires of stating that *kaivalya*, "isolation-integration," can be attained only by turning away from the distracting allure of the world and worshiping with single-pointed attention the formless Brahman-Atman; to the Tāntric, however, as to the normal child of the world this notion seems pathological, the wrong-headed effect of a certain malady of intellect. By the true lover of the Goddess, not merely the seeking of liberation but even its attainment is not desired. For what is the use of salvation if it means absorption? "I like eating sugar," as Rāmprasād said, "but I have no desire to become sugar."¹⁷ Let those who suffer from the toils of saṃsāra seek release: the perfect devo-

tee does not suffer; for he can both visualize and experience life and the universe as the revelation of that Supreme Divine Force (*śakti*) with which he is in love, the all-comprehensive Divine Being in its cosmic aspect of playful, aimless display (*līlā*)_which precipitates pain as well as joy, but in its bliss transcends them both. He is filled with the holy madness of that "ecstatic love" (*prema*) which transmutes the world.

This very world is a mansion of mirth;
Here I can eat, here drink and make merry.¹⁸

Artha (prosperity), kâma (the fulfillment of sensual desires), dharma (the enactment of the religious and moral rituals of everyday life, with an acceptance of the burden of all the duties), and moksa (release from it all) are one. The polarity of moksa and the trivarga¹⁹ is transcended and dissolved not in introverted realization alone, but in living feeling as well. By virtue of his talent of lover for the merciful Goddess, the true devotee discovers that the fourfold fruit of artha, kama, dharma, and moksa falls into the palm of his hand.

"Come, let us go for a walk, O mind, to Kâlî, the Wish-fulfilling Tree," wrote Râmpresâd; "And there beneath It gather the four fruits of life."²⁰ "The mind ever seeks the Dark Beautiful One, he states again. "Do as you wish. Who wants Nirvana?"

Tântrism, as a matter of course, insists on the holiness and purity of all things; hence, the "five forbidden things" ("the five M's, as they are called) constitute the substance of the sacramental fare in certain Tantric rites: wine (*madya*), meat (*mâmsa*), fish (*matsya*), parched grain (*mudrâ*),²¹ and sexual intercourse (*maithuna*). As in the parallel Mahâyâna initiations,²² the nondualist realization makes all the world one-one, holy, and pure. All beings and things are members of a single mystic "family" (*kula*). There is therefore no thought of caste within the Tântic holy "circles" (*cakra*). Sûdras, outcastes, and Brahmans alike are eligible for initiation-if spiritually competent. The aspirant must only be intelligent, with his senses controlled, one who abstains from injuring any being, ever doing good to all, pure, a believer in the Veda, and a nondualist, whose faith and refuge are in Brahman:

"Such a one is competent for this scripture; otherwise he is no adept."²³

One's secular social standing is of no consequence whatsoever within the sphere of the truly spiritual hierarchy. Moreover, women as well as men are eligible not only to receive the highest initiation but also to confer it in the role of guru. "Initiation by woman is efficacious; that by the mother is eightfold so," we read in the *Yogini Tantra*.²⁴ In striking contrast to the Vedic texts, wherein even the hearing of the Veda is forbidden to a *sūdra*, and wherein women are consigned to a secondary (though highly praised and sentimentalized) sphere of spiritual competency and aspiration, the Tantras transcend the limits of social and biological differentiation.

However, it must not be supposed that this indifference to the rules of caste implies any idea of revolution within the social sphere, as distinguished from the sphere of spiritual progress. The initiate returns to his post in society; for there to, is the manifestation of Sakti. The world is affirmed, just as it is—neither renounced, as by an ascetic, nor corrected, as by a social reformer. The prerequisite to the initiation being an actual superiority to fear and desire, and the rite itself a confirmation of the understanding that all is divine, the true lover of the Goddess remains content with what She has bestowed, not finding fault with the various traditional proprieties of time and place, but beholding the Divine power, with whom he is himself identical in essence, within all arrangements.

For the idea of dharma is intrinsic to Indian thought. The sacrament of the "five forbidden things" does not open a way to either libertinism or revolution. On the plane of ego-consciousness, where one operates as an individual member of society, the dharma of one's caste and *āśrama*²⁵ still prevails, the height beyond dharma and *adharma* being ascended only by one in whom the mind has been transcended—in which superior state there can be no question of a desire to enjoy the benefits of illegal practices. The Tantric ritual of wine, meat, fish, parched grain, and sexual intercourse is accomplished not as a lawbreaking revel, but under the cautious supervision of a guru, in a controlled state of "nondualist" (*advaitic*)

realization, and as the culminating festival of a long sequence of spiritual disciplines, through many lives. The spiritual emotion of the adept is *prema*: ecstatic, egoless, beatific bliss in the realization of transcendent identity.

Coming down again from this sublime height of form-annihilating realization to the kingdom of phenomenality, differentiation is seen but there is no estrangement; there is no tendency then to deprecate-for there is no guilt, there has been no Fall. The world does not require to be reformed; nor are its laws to be disregarded. All of the various planes of manifestation of the absolute can be beheld in a dispassionate spirit. The solid, the liquid, and the gaseous states of the one substance, under differing conditions, producing differing effects, are accepted without moral or emotional preference. For the whole spectacle of the world, without exception, is generated by the dynamism of *Mâyâ-Sakti*, the power of the cosmic dance (*lîlâ*) of the dark and terrible, sublime, all-nourishing and consuming Mother of the World. The beings of the world, and all the ranges of experience, are but waves and strata in a single, ever-flowing, universal stream of life.

Obviously, this is the view that we have already encountered many times in our present examination of the philosophies of India. The hymn from the *Taittiriya Brâhmana*, celebrating the substance and energy of the world as food,²⁶ was based on a nondualism of just this kind. The released-reborn celebrates himself as food-and-eater; for though the gross outer sheath of the organism, the "sheath of food" (*annamayakosa*), is not the whole of the divine manifestation (there being, in the subtle sphere of the several inner sheaths, more subtle formations and incarnations of the Supreme Essence), nevertheless "food is not to be despised." The reality of Brahman was realized in the orthodox Vedic Brahman tradition progressively, under various manifestations: as the life-matter of the material world, in the Hymn of food; or as the sun, "he who yonder glows," in a multitude of other Brahmanic songs of celebration; or again, as the macrocosmic life-breath (*vâyu*), "he who blows," which is the counterpart of the microcosmic *prana*.

Throughout the history of Brāhman thought there has been a reiterated assertion-either violent and passionate, or vigorously controlled-that the "One is both at once," and in this respect Tāntrism continues the orthodox Vedic line. Everything proceeds from the same supernal source. All beings are members of a single holy family, proceeding from the one and only divine substance. And this view involves, as we have seen, on the one hand devaluation of the peculiarly personal nuances of individuality, but on the other a bold affirmation of all that may ever come to be. Māyā, the world illusion, is not to be rejected but embraced. The lyricism of the Vedānta-Gītā²⁷ gave expression to this world-affirmative. The Tantra does so again. And it is reflected today through the whole range of the popular Hindu theologies.

But there is a peculiar and essential trait of the Tāntric Yea which distinguishes it from the earlier philosophies-or at least these as they appear in the orthodox texts and commentaries; for the ideal of Tāntrism is to achieve illumination precisely by means of those very objects which the earlier sages sought to banish from their consciousness. The ancient Vedic cult was world-affirmative, but its rites were primarily those of the vast popular and royal ceremonials in honor of the gods of the macrocosm; they did not invite one to fathom the deep resources of the microcosm. The forest philosophers, on the other hand-devoted to the introvert techniques of Jainism, Yoga, Sāṅkhya, Vedānta, and the Hinayāna-strove to repress their personal biological impulses by subjecting themselves to a spiritual reducing diet for the conquering of rajas, tamas and the vāsanās (the vessels of memory and desire); and when this transferred them finally to a plane beyond sin and virtue-they remained virtuous. Indeed, they had had to cast away the capacity for sinning at the very start, as the first prerequisite of their approach to a guru.²⁸ But in the Tantra, whereas the goal is that of the meditating yogi (not worldly power, such as was sought by the ancient Brāhman conjurers of the forces of the universe, but enlightenment, absolute consciousness, and the beatitude of transcendental being), the manner of approach is that, not of Nay, but of Yea. That is to say, the world-attitude is affirmative, as in the Veda, but the gods are now addressed as dwelling within the microcosm.

Thus it may be said that if the Vedānta seems to represent the conquest of the monistic Āryan Brahman heritage by the dualist ideology of the pre-Āryan seekers of integration-isolation (*kaivalya*),²⁹ in the Tantra we are, perhaps, justified in recognizing just the opposite influence; a re-rendering of the pre-Āryan problem of psychophysical transubstantiation in terms of the nondual philosophy of the all-affirmative Brāhmanic point of view. Here the candidate for wisdom does not seek a detour by which to circumvent the sphere of the passions-crushing them within himself and shutting his eyes to their manifestations without, until, made clean as an angle, he may safely open his eyes again to regard the cyclone of samsara with the untroubled gaze of a disembodied apparition. Quite the contrary; the Tantric hero (*vīra*) goes directly *through* the sphere of greatest danger.

It is an essential principle of the Tantric idea that man, in general, must rise through and by means of nature, not by the rejection of nature, "As one falls onto the ground," the *Kulārṇava Tantra* states, "so one must lift oneself by the aid of the ground,"³⁰ The pleasure of love, the pleasure of human feeling, is the bliss of the Goddess in her world-productive dance, the bliss of śiva and his śakti in their eternal realization of identity; only as known in the inferior mode of ego-consciousness. The creature of passion has only to wash away his sense of ego, and then the same act that formerly was an obstruction becomes the tide that bears him to the realization of the absolute as bliss (*ānanda*). Moreover, this tide of passion itself may become the baptizing water by which the taint of ego-consciousness is washed away. Following the Tantric method, the hero (*vīra*) floats beyond himself on the roused but canalized current. This is what has discredited the method in the eyes of the community. Its heroic acceptance, without quibble, of the full impact and implication of the nondual celebration of the world as Brahman has seemed far too bold, and too sensational, to those whose view of saintliness embraces of Lord's transcendent repose but omits the detail of His mystery play (*līlā*) of continuous creation.

A right method cannot exclude the body; for the body is *devatā*, the visible form of Brahman as jīva. "The Sādhaka [the

Tāntric student !," writes Sir John Woodroffe, "is taught not to think that we are one with the Divine in Liberation only, but here and now, in every act we do. For in truth all such is Sakti. It is siva who as Sakti is acting in and through the Sādhaka...When this is realized in every natural function, then, each exercise thereof ceases to be a mere animal act and becomes a religious rite—a Yajña. Every function is a part of the Divine Action (*sakti*) in Nature. Thus, when taking drink in the form of wine the Vira knows it to be Tārā Dravamayī, that is, 'the Saviour Herself in liquid form.' How (it is said) can he who truly sees in it the Saviour Mother receive from it harm ? When the Vira eats, drinks or has sexual intercourse, he does so not with the thought of himself as a separate individual satisfying his own peculiar limited wants, an animal filching as it were from nature the enjoyment he has, but thinking of himself in such enjoyment as Siva, saying 'Sivo 'ham,' 'Bhairavo 'ham' ('I am siva')."³¹

Sex, in Tāntrism, has a high symbolic role. The holy fear of the uncontrollable forces in human nature and the consequent strict resistance to the animal instincts and energies, which characterize the common history of man from the earliest taboo to the latest moral tract, can be explained as the result and residue of devastating experiences in the past of the race and the by-product of the successful, historical struggle for independence of a higher, "purer", spiritual principle. The primitive forces, out of the depths of which this principle arose, like the victorious sun, Sol Invictus, climbing the heavens out of the stormy sea (the turbulent abode of the monsters of the deep), had to be checked, held at bay and tied back, like the Greek Titans imprisoned under volcanic Aetna, or like the great Dragon of the Revelation of St. John. The very real peril of an elementary upheaval and rocking outburst led to the construction of protective dichotomic systems, such as those, not only of jainism and the Sāṅkhya, but also of the Persian Zoroastrian ethical religion, the Gnosis of the Near East, Christianity, Manichaeism, and the usual codes of manners of primitive and civilized mankind. In India, in the ancient world, and among most of the peoples known to anthropologists and historians, there has been, however, an institutionalized system

of festivals —festivals of the gods and genii of vegetation— whereby, without danger to the community, the conventional fiction of good and evil could be suspended for a moment and an experience permitted of the mighty titan-powers of the deep. Carnival, the day of masks, revealing all the odd forms that dwell in the profundities of the soul, spills forth its symbols, and for one dreamlike, nightmarish, sacred day, the ordered, timid consciousness freely revels in a sacramentally canalized experience of its own destruction.

The masks are dreamlike. Dreamlike also are the carnival events. Indeed, the world of sleep into which we descend every night, when the tensions of consciousness are relaxed, is precisely that from which the demons, elves, divine and devilish figures of the world mythologies have all been derived. All the gods dwell within us, willing to support us, and capable of supporting us, but they require the submission of consciousness, an abdication of sovereignty on the part of our conscious wills. In so far, however, as the little ego regards its own plans as the best, it resists rigorously the forces of its divine substratum. The gods thereupon become dangerous for it, and the individual becomes his own hell. The ancient people made peace with the excluded forces by holding them in worship and allowing them their daemonic carnival—even while cultivating, simultaneously, under the forms of sacrifices to the higher gods, a fruitful relationship with the forces implicated in the social system. And by this means they won the permission, so to speak, of their own unconscious to continue in the conventional conscious attitude of profitable virtue.

But the Tànttric sàdhaka is not interested in conventional survival so much as in the fathoming of life and the discovering of its timeless secret. Hence the makeshift of carnival is not enough; for this only supports the general illusion. His goal is to incorporate the excluded forces as well as those accepted generally, and experience by this means the essential nonexistence of the antagonistic polarity—its vanishing away, its nirvana; i.e., the intrinsic purity and innocence of the seemingly dark and dangerous sphere. In this way he breaks within himself the tension of the

"forbidden," and resolves everything in light; recognizing in everything the one Sakti which is the general support of the world, macrocosmic as well as microcosmic, the mother of the gods and elves, the weaver of the moon-dream of history. Therewith comes release from the world-illusion-release through its full enjoyment or realization.

Hence the great Tāntric formula (so different from that of the earlier Hindu yogic disciplines): yoga (the yoking of empirical consciousness to transcendental consciousness) and bhoga ("enjoyment," the experience of life's joy and suffering) are the same. Bhoga itself can be made a way of yoga.

But it requires a hero (*vira*) to confront and assimilate, in perfect equanimity, the whole wonder of the World Creatrix—to make love, without hysterical reactions, to the Life-force, which is the sakti of his own entirety. The "five good things" (*Pancatattva*), which are the "forbidden things" of the ordinary men and women of the herd, serve as sacramental fare for one who not only knows but feels that the World Force (*sakti*) is in essence himself. In Tantra, the worship of the World Creatrix in her own terms is rendered possible; for cohabitation (*maithuna*), her own supreme holy rite, is realized not in the spirit of the *pasu* ("cattle"; the human animal of the herd, desiring, fearing, and enjoying in the usual animal-human way), but of the *vira* ("hero") who knows himself to be identical with Siva. "Om," he prays (and knows); "into the Fire which is Spirit (*ātman*) brightened by the pouring on of the ghee of merit and demerit, I, by the path of yoga (*susumnā*), ever sacrifice the functions of the senses, using the mind as the ladle of the offering. Hallelujah!"³²

The fruit of the rite then is release from illusion, which is the highest gift of Kālī, the dark and beautiful Goddess-Dancer of the Cremation Ground.

2

The Lamb, the Hero, and the Man-God

"No ONE who is not himself divine may (successfully) worship the divinity (*nādevo devam arcayet*)."³³ "Having become the deity, one should offer sacrifice to it (*devam bûtvā devam yajet*)."³⁴ The identity of the hidden nature of the worshiper with the god worshiped is the first principle of the Tāntric philosophy of devotion. The gods are reflexes in space (which is itself the work of *mâyā-sakti*) of that sole reality, Brahman, which is the Sakti of the devotion, the Tāntric *sādhaka* approaches the Goddess in worship (*pūjā*), through the meditative muttering of prayers (*japa*: the recitation of the litany of her names), the unrelenting verbal repetition (again *japa*) of sacred formulae (*mantra*: word-sounds which contain her essence), the making of mental and external offerings (*homa*), and one-pointed meditation on her inner vision (*dhyaṇa*). He could never hope to experience the final identity if he were not already convinced and aware of it from the first. Meanwhile, to support his preliminary approach, he sets before his eyes and mind an image (*Pratika, Pratima*) of the deity. This may be a statue, painting, symbol of some kind, or yantra;³⁵ in special cases it may be a living being, for example, a virgin (*kumārīpūjā*), or the worshipers's wife.

The first act of devotion consists in contemplating inwardly the mental image of the deity and then projecting the spiritual energy (*tejas*) of that inner subtle form into the gross outer image. This consecration is known as *prāṇpratisthā*, "the consignment (*pratisthā*) of the vital breath (*prāṇa*). "It is to be undone again at the conclusion of the period of worship by a "dismissal" (*visarjana*) of the holy presence, following which the image is no longer the seat of a deity (*pitha*), and may be thrown away. The worshiper sends forth and takes back again the shining form, just as the Creator sends forth and takes back again into his infinite substance the manifold of the cosmos- and by virtue of the same infinitude (*brahman-ātman*) within, as well as the same miracle of *mâyā*. Later, when initiate learns to recognize and spontaneously respond to the presence of the divinity everywhere, in all things, he no longer requires the pedagogical assistance of this ritual, but

meanwhile his mind and sentiments must be given help. The little miracle of transubstantiation, however, is rather a microcosmic than a macrocosmic crisis. Divinity itself cannot be said to have been actually summoned and dismissed; rather, the *realization* of divinity has been facilitated. For, whereas the adept in the condition of perfect realization beholds and reveres the whole world as an icon or seat (*pitha*) of the Universal Presence, the usual member of the human herd (*pasu*) requires all the assistance of religion to bring his mind from the common, animal, economic-political mode of considering things, to the contemplative attitude of a luminous intuition.

The rites performed in the presence of a consecrated image are the counterparts of the secular rituals of daily life. The god is welcomed as a guest, with flowers, obeisance, washing of the feet, food, water for bathing, cloth for garments, jewels, perfume, incense, offerings of various kinds, praise, and conversation.³⁶ These redound, in turn, to the sanctification of daily life; for a guest is welcomed with the same ceremonial; a parent is honoured as a god, and a child attended as a god. The sanctity of the Presence thus perceptibly pervades the social sphere. Ritual gestures (*mudrā*) also are employed in the worship, and these, like words, are the expressions and supports of spiritual resolve. These gestures, or *mudrās*, are identical with those represented in Indian images and utilized in the art of the Indian dance. They constitute a veritable language of the hands, making possible the most subtle amplifications of expression. For example, when presenting, in offering, the vessel of water, the fish gesture (*matsya mudrā*) is made. "This is done as the expression of the wish and intention that the vessel which contains water may be regarded as an ocean with fish and all other aquatic animals. The sadhaka says to the Devata of his worship, 'this is but a small offering of water in fact, but so far as my desire to honour you is concerned, regard it as if I were offering you an ocean.'³⁷ Or again, when the Goddess is invited to take her place, before the moment of worship, the *yoni mudra* is made, since the yoni, the female organ, is her *pitha* or *yantra*. The yoni can never be regarded by a Tantric adept otherwise than as an altar. Therefore, when the sadhaka

has attained to perfection in this discipline he can proceed to the most appropriate and congenial form of paying worship to the Goddess, in maithuna.

Bhūtasuddhi, or "the cleansing (*suddhi*) of the (five) elements of which the body is composed (*bhūta*)," is an indispensable preliminary to every Tantric rite. The devotee imagines the divine power (*śakti*) as being asleep within him, withdrawn from operation in his gross physique, coiled away like a sleeping serpent (*kundalini*) at the root of his spine, in the deep place known as the *mūlādhāra*, "the root (*mūla*) base (*ādhāra*)." The sadhaka then pronounces mantra to arouse her, while controlling carefully his inhalations, breathing deeply first through one nostril then the other (*prāṇāyāma*), to clear the way for her through the spiritual channel (*susumnā*) that is supposed to run through the interior of the spine. He is then to think of her as aroused. She lifts her head and begins to move up the *susumna*, touching in her passage a number of "centers" or "lotuses" (*cakras, padmas*), which are regarded as the seats of the elements of the body. The *muladhara* is the seat of "earth"; it is pictured as a crimson lotus of four petals. The next center above, called *svādhīsthāna* (*śakti*'s "own abode"), is at the level of the genitals and is the seat of the element "water"; it is pictured as a vermilion lotus of six petals. The next, at the level of the navel, is known as *manipūra*, "the city (*pūra*) of the lustrous gem (*mani*)," so called because it is the seat of the element "fire". It is pictured as a blue-black lotus of ten petals. According to the psychology of this system of lotuses: *muladhara*, *svadhisthana*, and *manipura* are the centers from which the lives of most people are governed, while the superior centers represent higher modes of experience. The fourth, at the level of the heart, is the lotus in which the first realization of the divinity of the world is experienced. Here, it is said, the god reaches down to touch his devotee. Or again, here the sages hear the sound (*śabda*) of Brahman. Sounds heard by the outer ear are produced by "two things striking together," whereas the sound of Brahman is *anāhata śabda*, "the sound (*śabda*) which comes without the striking of any two things together (*anāhata*)."³⁸ This sound is OM; not the OM pronounced by the lips, which is but a

mnemonic suggestion produced by the striking of the wind from the lungs upon the organs of the mouth, but the fundamental OM of creation, which is the Goddess herself as sound. Because this is heard in the lotus of the heart, that center is called *anāhata*; it is pictured as a ruddy lotus of twelve petals, and is the seat of the element "air".

"Ether," the fifth and ultimate element, is centered in the cakra of a smoky purple hue and of sixteen petals at the level of the throat. This is the Visuddha Cakra, "the completely purified." Beyond, at the point between the eyebrows, is the Lotus of Command (*ājñā*). White as the moon, possessing two petals, shining with the glory of perfected mediation, wherein the mind, beyond the zones veiled by the five elements and thus completely free of the limitations of the senses, beholds immediately the seed-form of the Vedas. This is the seat of the Form of forms, where the devotee beholds the Lord—as in the Christian heaven. Beyond is the center beyond duality, Sahasrara, the vari coloured lotus of a thousand petals at the crown of the head. Here Sakti—who is to be thought of as having ascended through all the lotuses of the *susumnā*, waking each lotus to full blossom in passing—is joined to Siva in a union that is simultaneously the fulfillment and dissolution of the worlds of sound, form, and contemplation.

The Tāntric worshiper is supposed to *imagine* himself as having purified his body by suffusing all the lotuses with the awakened Sakti in this way (only a perfected yogi being capable of making the kundalini actually rise). Meditation (*dhyāna*), the recitation of charms filled with the power of the Goddess in the form of sound (*mantrā*), eloquent postures of the hands and body (*mudrā*), and the meditative placing of the tips of the fingers and palm of the right hand on various parts of the body, accompanied by mantra (*nyāsāa*,³⁹ assist him in this process, as well as in that of welcoming the god into the Image or yantra. The two processes are reciprocal, and constitute the whole mystery of ritualistic transubstantiation. Hence we read, in the *Gandharva Tantra*: "A man should worship a divinity (*devatā*) by becoming a divinity himself. One should not worship a divinity without oneself becoming a

divinity. If a person worships a divinity without becoming himself a divinity, he will not reap the fruits of that worship."⁴⁰ And again, in the *Vásistha Rāmāyana*: "If a man worships Visnu without himself becoming Visnu, he will not reap the fruits of that worship. If he worships Visnu by becoming himself Visnu, an initiate (*sādhaka*) will become Great Visnu (*Mahāvisnu*, i.e., the Being that is beyond the personal aspect of the god)."⁴¹ And once again, this time in the *Bhavisya Purāna*: "A man should not mediate on Rudra without himself becoming Rudra,"⁴² nor take the name of Rudra (by muttering the "garland" of the god's names) without becoming Rudra; nor will he attain Rudra without becoming Rudra."⁴³

The act of worship is meant to facilitate a direct, immediate experience of what the *sādhaka* already knows theoretically, namely, that *jiva* and *isvara* (the latter preferably in the feminine form of *sakti*) are in essence one, being the complementary forms through which Brahman becomes manifest in the field of the pairs-of-opposites, the created world. The *sādhaka* confronts his *devata*, which is represented in the form either of an external image or of an interior vision, on the plane and in the state of dualism, yet he knows that what appears as two is actually one. The activity of self-surrender then leads to the perfect realization of this mystery. Surrender of the illusory sovereign nature of the individual transforms him into a servant (*dāsa*) of the divinity, and this state, when brought to perfection, then reveals to him his own fundamental sovereignty as the deity itself. The fervor of daily worship through *bhakti* yoga thus awakens the hidden divine nature in man, and divine ecstatic beatitude (*Prema*) supervenes following the moment of perfect participation. Similarly, the son the wealthy man, in the above-cited parable of the Mahāyāna-Buddhist *Sadharmapundarika*, without knowing it, served his father as a servant, gradually was advanced in his estate, and eventually came to realize that he was himself the son and heir of the master, entitled to all his possessions; indeed, himself the rich man, the alter-ego of his lord.⁴⁴

But the rites and grades of service are governed by the spiritual character of the devotee. This is a basic principle of all Indian psychological training. The personality endowed with *rajas*

(the quality of vigor and action) will require a different *sadhana* from one steeped in *tamas*, while the godlike man of brilliant *sattva* will be fit for still another way. In the Tantric vocabulary these three types are known, respectively, as *vira*, the hero, *pasu*, the dark-witted animal of the herd, and *divya*, the godlike, luminous saint.

It is noteworthy, and perhaps a symptom of Ksatriya provenience, that in the classic Tāntric Āgamas the emphasis is given to the *vira*, the man of *rājasic* disposition. According to the ideal and way of the Vedānta, *rajas* was to be subdued by *sattva*, all the disciplines being founded on the principle of the perfect mirror-pond, but in the classic Tāntric realization the victory was achieved by way of the passions themselves: they were challenged, directly faced, and ridden as a mettlesome stallion by a knight. The "five good things," which for the *pasu*, the pedestrian, the man of the herd, represent only danger, became the pre eminent vehicles of attainment. "The five essential elements in the worship of Sakti," the *Mahānirvāṇa Tantra* states, "have been prescribed to be wine, meat, fish, parched grain, and the union of man with woman. The worship of Sakti without these five elements is but the practice of evil magic (*abhicāra*: a ritual that injures or destroys); the power that is the object of the discipline is never attained thereby, and obstacles are encountered at every step. As seed sown on barren rocks does not germinate, so worship (*Pūjā*) without these five elements is fruitless."⁴⁵ These statements are quoted in the text as the words of Siva to his Sakti, pronounced in the inner chamber of their divinely blissful abode, on the summit of the sacred mountain Kailāsa.

Neither the saintly nor the gentlemanly Hindu of today, however, favors the boldness of this heroic view. Instead, the attitude formerly assigned to the *Pasu* is recommended for all, that namely of worshiping the life force (*sakti*) not as the Bride but as the Mother, and thus submitting, like a child, to a sort of sacramental castration. "The attitude of a 'hero,'" said Rāmakrishna to one of the most worldly of his devotees, Girish Chandra Ghosh, a successful dramatist and the director of the Calcutta "Star Theatre": "The attitude of a, 'hero' is not good. Some people cherish it.

They regard themselves as Purusa and woman as Prakrti; they want to propitiate woman through their intercourse with her. But this method often causes disaster."

GIRISH: "At one time I too cherished that idea."

Sri Ramakrishna gazed at Girish pensively, in silence.

GIRISH: "I still have that twist in my mind. Tell me what I should do."

RĀMAKRISHNA (*following a moment of silent consideration*): "Give God your power of attorney. Let Him do whatever He likes."

Abruptly, the conversation was then turned to a discussion of Ramakrishna's younger devotees.

RĀMAKRISHNA (*to Girish and the rest*): "In meditation I see the inner traits of these youngsters. They have no thought of acquiring house and property. They do not crave sex pleasure. Those of the youngsters who are married do not sleep with their wives. The truth is that unless a man has got rid of rajas and has acquired sattva, he cannot steadily dwell in God; he cannot love God and realize Him."

GIRISH: "You have blessed me."

RĀMAKRISHNA: "How is that ? I said that you would succeed if you were sincere."

Before Girish could respond, Sri Rāmakrishna cried, with a shout of joy, "Ānandamayī !" and the company saw him—as they had beheld him many times before—pass abruptly from normal consciousness to the trance state of divine absorption (*samādhi*). He remained abstracted for some time, but presently moved, and soon was back again, vivaciously participating in the conversation.⁴⁶

One of his "youngsters" had inquired, on a former occasion: "Isn't it true that the Tantra prescribes spiritual discipline in the company of women ?"

"That," the Master had replied, "is not desirable. It is a very difficult path and often causes the aspirant's downfall. There are three such kinds of discipline. One may regard woman as one's

mistress or look on oneself as her handmaid, or as her child. I look on woman as my mother. To look on oneself as her handmaid is also good; but it is extremely difficult to practice spiritual discipline looking on woman as one's mistress. To regard oneself as her child is a very pure attitude."⁴⁷

And on another occasion: "Sakti alone is the root of the universe. That Primal Energy has two aspects: vidyā and avidyā. Avidyā deludes. Avidyā conjures up 'woman and gold,' which casts the spell. Vidyā begets devotion, kindness, wisdom, and love, which lead one to God. This avidya must be propitiated, and that is the purpose of thirties of Sakti worship.

"The devotee assumes various attitudes toward Sakti in order to propitiate Her: the attitude of a handmaid, a 'hero,' or a child. A hero's attitude is to please Her even as a man pleases a woman through intercourse.

"The worship of Sakti is extremely difficult. It is no joke. I passed two years as the handmaid and companion of the Divine Mother. But my natural attitude has always been that of a child toward its mother. I regard the breasts of any woman as those of my own mother. Woman are, all of them, the veritable images of Sakti."⁴⁸

In the classic Tāntric Āgamas three varieties of sādhanā are prescribed for the various temperaments. That of the "five good things," as we have described them, is for the *vira*. But for the *pasu*, these are still the "five for bidden things." And so the term "wine" (*madya*) is interpreted in his case to mean coconut water, milk, or some other indicated "substitutional substance" (*anukalpatattva*). Similarly, instead of "meat" (*māmsa*), he partakes of wheat-beans, ginger, sesamum, salt, or garlic, and instead of "fish" (*mastya*), for red radish, red sesamum, masur (a kind of grain), the white brinjal vegetable, and paniphala (an aquatic plant). "Parched grain" (*mudrā*) in the form of rice, wheat, paddy, etc., is permitted, but instead of maithuna, childlike submission is recommended before the Divine Mother's Lotus Feet.⁴⁹

The *divya*, the god-man of purest *sattva*, on the other hand, is far, far beyond both the "substitutional," safe-and-sane sādhanā

of the pious lamb, but also beyond the fearless, chivalric experiences of the hero. For him no external image or sacrament whatsoever is required. Hence, in the rereading of the "five good things" as prescribed for the divya, "wine" (*madya*) is not any liquid, but that intoxicating knowledge acquired by yoga of the Parabrahman which renders the worshiper senseless as regards the external world. 'Meat' (*māmsa*) is not any fleshly thing, but the act whereby the sadhaka consigns all his acts to 'Me' (*mm*), that is, the Lord (this, of course, is a pun). 'Fish' (*matsya*) is that sattvic knowledge by which through the sense of 'mineness' (a play upon the word *matsya*) the worshiper sympathizes with the pleasure and pain of all beings. *Mudrā* is the act of relinquishing all association with evil which results in bondage. While 'coition' (*maithuna*) is the union of the Sakti Kundalini, the 'Inner woman' and World-force in the lowest center (*mūlādhāra cakra*) of the sadhaka's own body with the supreme Siva in the highest center (*sahasrāra*) in his upper brain.⁵⁰

For, whereas the pasu or vira devotee practicing bhūtasuddhi (the ritual purification of the elements of the body in preparation for an act of dualistic worship)⁵¹ has to *imagine* the purifying ascent of the Kundalini through the centers or lotuses (*cakras*, *padmas*) of the susumna, the divya, adept in the exercises of the Tāntric Kundalini Yoga, actually brings this psychosomatic miracle to pass. Āsana and mudrā (proper seat and posture), prāṇāyāma (control of the breath), dhyāna and mantrā (interior visualization and the concentrated recitation of certain "seed" sounds and formulae), following a long and severe preliminary training in physical and emotional self-purification, lead actually to a physical effect which is described as the channeling of all the energies of the body into a subtle channel up the interior of the spine (*susumna*). In this case, the rise of the "serpent Power" (*kundalini*) and awakening of the lotuses (*padmas*) does not have to be imagined, it actually comes to pass. And when the sixth center is attained—the "Lotus of Command" (*ājñā*) between the eyebrows—the Lord (*isvara*) is actually seen, not simply imagined, and the beholder is completely lost in savikalpa sāmādhi—communion with the Brahman "with limitations" (*savikalpa*), where the distinction between the subject and the personal God is retained.⁵²

Whereas the moment the rising force then enters the ultimate thousand-petalled lotus at the crown of the head (the *sahasrāra*), where Siva and Sakti are one, the knowledge of duality is in sheer experience transcended, and the state of the yogi becomes that of *nirvikalpa samadhi*: realization of the identity of *Ātman* with the Brahman "beyond all limitations" (*nirvikalpa*), where both the subject and its highest object are annihilate.⁵³

"There is one simple test whether the Sakti (= *kundalinī*) is actually aroused," writes Sir John Woodroffe. "When she is aroused intense heat is felt at that spot, but when she leaves a particular center the part so left becomes as cold and apparently lifeless as a corpse. The progress upwards may thus be externally verified by others. When the Sakti (Power) has reached the upper brain (*sahasrāra*) the whole body is cold and corpse-like; except the top of the skull, where some warmth is felt, this being the place where the static and kinetic aspects of Consciousness unite."⁵⁴

"Sometimes the Spiritual current rises through the spine, crawling like an ant," Rāmakrishna told a circle of his intimate friends. "Sometimes, in *samādhi*, the soul swims joyfully in the ocean of divine ecstasy, like a fish. Sometimes, when I lie down on my side, I feel the Spiritual current pushing me like a monkey and playing with me joyfully, I remains still. That current, like a monkey, suddenly with one jump reaches the *Sahasrara*. That is why you see me jump up with a start.

"Sometimes, again, the Spiritual Current rises like a bird hopping from one branch to another. The place where it rests feels like fire. It may hop from *Mūlādhāra* to *svādhishthāna*, from *Svādhishthāna* to the heart, and thus gradually to the head. Sometimes the spiritual Current moves up like a snake. Going in a zigzag way, at last it reaches the head and I go into *samādhi*.

"A man's spiritual consciousness is not awakened unless his *Kundalini* is aroused. The *Kundalini* dwells in the *Mūlādhāra*. When it is aroused, it passes along the *Susumna* nerve, goes through the centers of *Svādhishthāna*, *Manipūra*, and so on, and at last reaches the head. This is called the movement of the *Mahavayu*, the Spiritual Current. It culminates in *samadhi*.

"One's spiritual consciousness is not awakened by the mere reading of books. One should pray to God. The Kundalini is aroused if the aspirant feels restless for God. To talk of knowledge from mere study and hearsay ! What will that accomplish ?

"Just before my attaining this state of mind, it had been revealed to me how the Kundalini is aroused, how the lotuses of the different centers blossom forth, and how all this culminates in samādhi. This is a very secret experience. I saw a boy twenty-two or twenty-three years old, exactly resembling me, enter the Susumnā nerve and commune with the lotuses, touching them with his tongue. He began with the center at the a minus and passed through the centers of the sexual organs, navel, and so on. The different lotuses of those centers—four-petalled, six petalled, and so forth—had been drooping. At his touch they stood erect.

"When he reached the heart—I distinctly remember it—and communed with the lotus there, touching it with his tongue, the twelve-petalled lotus, which was hanging head down, stood erect and opened its Petals. Then he came to the sixteen-petalled lotus in the throat and the two-petalled lotus in the throat and the two-petalled lotus in the forehead. And last of all, the

thousand-petalled lotus in the head blossomed. Since then I have been in this state,"*

"Waken, O Mother!" wrote Ramprasad, "O Kundalini, whose nature is Bliss Eternal! Thou art the serpent coiled in sleep, in the lotus of the Muladhara!"⁵⁶

"In dense darkness, O Mother," runs another wonderful song, "Thy formless beauty sparkles":

In dense darkness, O Mother, Thy formless beauty sparkles; Therefore the yogis meditate in a dark mountain cave.

In the lap of boundless dark, on Mahānirvāna's waves upborne, Peace flows serene and inexhaustible.

Taking the form of the Void, in the robe of darkness wrapped, Who art Thou, Mother, seated alone in the shrine of samādhi ?

From the Lotus of Thy fear-scattering Feet flash Thy love's lightning;

Thy Spirit-Face shines forth with laughter terrible and loud.⁵⁷

3

All the Gods within Us

IN THE Jaina and kindred teachings, matter is described as of an inert and lifeless (*ajiva*) character. The ruthless asceticism of the "naked philosophers" (the "gymnosophists" who astounded Alexander's Greeks) followed logically from their resolution to be sterilized of this dead material and thus rendered pristine—pure, luminous, and perfect. Like balloons leaving the earth below—the earth, its atmosphere, and even the ultimate stratospheric envelope—their life-monads were leaving beneath them, trait by trait, the universal bandages of lifeless "life." As we have seen, the force in India of that pre-Aryan, dualistic, yogic point of view was so great that even the exuberant monism of the Brāhmins finally submitted to its life-searing influence. Gradually, the vigorous world-affirmation of the Vedic period underwent a strangely contradictory change, until, in what is generally regarded as the supreme nondualistic designation of Brahman as *sat, cit, ānanda* ("pure being, consciousness, and bliss," absolutely uninvolved in the bondage, ignorance, and misery of the world illusion) the yogic principle won its most impressive triumph. For although it is true that instead of the pre-Aryan, jaina, and Yoga ideal of the "isolation-integration" (*kaivalya*) of separate life-monads (*jivas, purusas*) the new goal was that of reunion with the one Saccidānanda Brahman, "one-without-a-second," nevertheless this nondual reunion, this recognition of an identity which in reality had never been forfeited, was understood as being synonymous with a refutation of the false notion of the existence of a cosmos: a dissolution of the "superimposition" due to "ignorance". "That which is untouched by the sixfold wave [of decay and death, hunger and thirst, grief and delusion], meditated upon by the yogi's heart but not grasped by the sense-organs, which the faculty of intuition (*buddhi*) cannot know, and which is faultless (*anavadyam*):

that Brahman art thou—meditate upon this in thy mind.”⁵⁸ The same, basic ascetic attitude of rejection as that which in the pre-Āryan past has sundered human experience into the spheres of *aīva* and *jīva*, was now discriminating between *samsāra* and *nirvāna*, while striving for identification (“without remainder”) with the unimplicated term.

And yet, on the other hand, ther flourishes in India, side by side with this attitude of negation, a vigorous affirmation of the world of flux and time, which is just as fearless and absolute, in its own way, as the unflinching self-transcendence of the yogis. In that land the great human effort, looking either way, seems always to have been to break the all-too-human limitations of the mind by means of “inhuman” techniques. The ideals and disciplines of the castes are “inhuman”—humanistically speaking; and in a sense, every Indian, one way or another, is a yogi: for *bhakti*, the popular Hindu “path of devotion,” is itself *yoga*: an internal “yoking” of the mind to a divine principle. Wherever *bhakti* is carried to an ultimate statement, as for instance in the *Bhagavad Gita* and the sacraments of the Tāntric “five good things” (*pañcatattva*), the secular initiate is inspired to a challenge and assimilation of the *immanent* aspect of absolute Being, which is no less audacious than the corresponding effort, in the penitential groves, to assimilate the *transcendent*.

The Brāhman mind, in other words, did not capitulate unconditionally to the principle of world-rejection. The psychophysical problems posed by the Vedic monist philosophy that matured during the period of the Upanisads are as open to world-assertive as to negating replies. The more amply documented Indian philosophical tendency, and the one first encountered by the Western scholars, was that represented in the schools of the Vedānta and Hīnayāna, but in recent years the power and profundity of the Tāntric system have begun to be appreciated, and therewith has been facilitated a new understanding of Indian life and art. Indeed, one could only have been amazed had it been found that in the most durable civilization known to history the sole intellectual response to such a dictum as “All Is Brahman” had been that of a monastic renunciation of the manifest for the unmanifest as-

pect of the metaphysical equation. Had we not learned what we now know of the philosophy of the Tāntric Agāmas; we should have had to posit some such tradition; for as the Indian centuries open their secrets to us we become more and more aware of the power of something very different from the sublimated melancholy of the monks, in the life-loving Hindu contemplation of the delicacies of the world of name and form. In the majestic sculptural rendering of Siva Trimūrti at Elephanta,⁵⁹ in the now well-known South-Indian bronzes of the Dancing Siva,⁶⁰ in the phantasmagoric "foam and mist" style of the great masterpieces of Bhājā, Māmallapuram, and Elūrā,⁶¹ as well as in the Indian aesthetic phenomenon which I have elsewhere described as that of "expanding form,"⁶² a stupendous dionysian affirmation of the dynamism of the phenomenal spectacle is rendered, which at once affirms and transcends the apprehended traits of the individual and his cosmos. Prakṛti herself (*natura naturans*, not the merely visible surface of things) is here portrayed—with no resistance to her charm—as She gives birth to the oceans of the worlds. Individuals—mere waves, mere moments, in the rapidly flowing, unending torrent of ephemeral forms—are tangibly present; but their tangibility itself is simply a gesture, an affectionate flash of expression on the otherwise invisible countenance of the Goddess Mother whose play (*līlā*) is the universe of her own beauty. In this dionysian vision the individual is at once devaluated and rendered divine, majestic with the majesty of Nature herself and mystically sheltered in the very maelstrom of the world.

Such a view, obviously, is not fit for all. It can appeal to only certain types and tastes: the aristocratic, for example, or the artistic, and the ecstatic. An intellectual temperament, though perhaps appreciative of the torrential magnitude of such a vision, will remain, necessarily, somewhat cool, refusing to respond to it with the whole personality. That is why this view—though certainly perennial in India—is less well documented in literature, theology, and philosophy than in the works of art. The texts are from the hands of intellectuals, by nature endowed for the abstract realizations of the way of disembodied thought (*jñāna-yoga*); but the art works have poured from the hands of crafts-

men commissioned by wealthy merchants and aristocrats—all the children, the servants, or the willing heroes of the Goddess; perhaps profoundly respectful of her more thoughtful sons, yet intimately aware, all the time, that there are riches, boons, and wondrous paradoxical insights that She holds in store only for those who truly dote on Her, and which the haughty discriminators, dedicated to the transcendental One-without-a-second, can never share.

Throughout the known history of India these two points of view have operated in a dialectic process of antagonistic cooperation to bring to pass the majestic evolution of art, philosophy, ritual and religion, political, social, economic, and literary forms, which we know today as the miracle of Indian civilization. By and large, it can be said that the nondual world-affirmation of the Vedic Brāhmans, with its wider swing and greater depth, has been the dominant and victorious contributor to the development. To the pluralistic-realistic, idealistic dualism of jaina-Sankhya stamp we can ascribe only a preliminary and provocative role. By virtue of a blood and vigours technique of philosophizing in paradoxes, continually establishing the essential unity of terms and spheres that would logically appear to be antagonistic, the fertile thought of Brāhmanism unfailingly brought together, fused, and transcended the pairs-of-opposites, which were then allowed to proceed again from each other in a brilliant dialectical play; Brahmanic thought being the philosophic counterpart and expression of the life-process itself, a reflection in conceptual terms of the paradoxology of life's unceasing dynamism.

Food, flesh, and blood become transformed in a living body into impulses, emotions, feelings, thought, and inspiration. These in turn condition and move the bodily frame. Then the decomposition of the same body after death converts it into the teeming life of worms and vegetation, which again is food. There is a continuous circuit of metabolism, an unending transformation of opposites into each other. And this reality of becoming is what is mirrored in the Brāhmanic monist conception of *māyā*. The perpetual motion of things turning into each other is the reality denoted by the icon of the Goddess. The female conceives by the male and transforms his seed into their common offspring, a

new formation of their substance. Such is the miracle of the enigma, Mâyâ-Sakti. Hers, therefore, is an erotic life-philosophy, precisely the opposite and exact compliment of the sterilizing, stern, sublime, ascetic thinking of the Jaina-Sankhya schools.

The concern of the latter is to divide, to cleanse of each other, and finally to separate forever, the life-principle, which is incorporeal, and the principle of both gross and subtle matter, which is life-conditioning, life-staining and -obscuring. In the long course of Indian thought, this stern ascetic attitude has been able to celebrate its moments of victory, and these moments have contributed immeasurably to the recolouring and renovation of Indian life. But that life itself, in accordance with its own innate dialectic principle of transformation, has then inevitably brought to pass a new miracle of absorption, assimilation, and restatement: time and time again, great, vigorous, tropical India has adopted the sublime way of sterilization, the way supremely represented in the teachings of the Buddha and in Sankara's Vedanta; but always the powers and wisdom of the erotic-paradoxical monism of life—and of the Brahman understanding—has again successfully reasserted its force.

Brahman, sakti, the force-substance of Indian nondual philosophy, is the principle that enters, pervades, and animates the panorama and evolutions of nature, but as the same time is the animated and pervaded, entered field or matter of nature itself (*prakṛti*, *natura naturans*); thus it both *inhabits* and *is* the manifested universe and all its forms. As the unceasing dynamism of the transitory sphere of becoming and withering away, it lives in all the changes of birth, growth, and dissolution.

But, simultaneously, it is remote from this sphere of change; for in its quiescent, dormant transcendent aspect it knows no phases and is detached from both the living and the dead. The names ascribed to it are concessions to the human mind. This mind, however, being itself of the essence of the unutterable, may be touched to Self-recollection by properly hearing one or another of the finally inadequate names. The name Brahman, Saccidānanda Brahman, is misleading; for it suggests that the transcendent *is*. The name Vacuity, Sūnyatā, the Void, is mis-

leading also; for it suggests that the transcendent *is not*. Perhaps, though, the latter is the less misleading and therefore the better term; for it does suggest transcendence, rather than definable existence. Nevertheless, the difference is not seriously worth an argument. As a clue either term will serve, whereas if not properly understood neither means a thing.

Brāhman philosophy produced its last synthesizing statement in the courageous esotericism of the Tantras and in the Tāntric Mahāyāna (the latter surviving today in the snow-clad summits and high dales of Tibet), where the old Āryan frenzy for non-dualism and the paradox, forever asserting the unity of incompatibles, fruitfully combined with its own incompatible—the archaic matrilineal world-feeling of the aboriginal civilization of India. What the Vedic sages had recognized in the heavens of the macrocosm, the Tāntric adept felt dwelling bodily within himself, in the microcosm, and he named it, also, "God." Hence, whereas the members of the Brāhman caste in Vedic times had conjured the holy power (*brahman*) by means of public sacrifices, the Tāntric devotee, of whatever caste, by means of the simple, essentially personal rituals of the circles of Tāntric initiates, sacrificed his own ego and thereby conjured the holy power (*Sakti*) of his own phenomenality into manifestation in his life. The gods served by the Brāhmins had been those of the community; the god worshiped by the Tantrist was his own, his *ista-devatā*, his chosen beloved—which yet was identical in essence with whatever deity was anywhere adored; for "It is only a food," states the *Sammohana Tantra*, "Who sees any difference between Rāma and Siva."⁶³ The eligibility of the Brāhman to serve and conjure the gods of the community had rested in the high rank of his caste in that community, whereas the eligibility of the Tāntric devotee reposed in the ripeness of his mind and power of experience. "The Brāhman who is a descendant of a Rsi, or holy sage," we read in the *Satapatha Brāhmaṇa*, "is all the gods."⁶⁴ "I am the Devi and none other," thinks the Tantric devotee. "I am Brāhman who is beyond all grief. I am a form of Saccidānanda whose true nature is eternal Liberation."⁶⁵

The idea of the godhood of the individual is thus democratized in the Tantra, because understood psychologically instead

of sociopolitically. As a result, the entire context of the public Indian faith has been reinterpreted. The rites and religiosity of contemporary India exhibit in every trait the profound influence of this Tāntric view; indeed, they have been for centuries more Tāntric than Vedic. In spite of vestigial remains of the archaic snobbism of caste, native Indian life is shot through with the radiance of a realization of universal divinity. In contrast to the attitude of Job who cried out to Yahweh: "What is man, that thou shouldst magnify him?" the Indian, by shattering his ego, equates himself with God, transcends God, transcends God, and is at peace in the knowledge of himself with God, transcends God, and is at peace in the knowledge of himself with God, transcends God, and is at peace in the knowledge of himself as Brahman. "The Mother is present in every house," writes Ramprasad. "Need I break the news as one breaks an earthen pot on the floor?"

- 34 An example of *nyāsa* in Christian worship is the making of the sign of the cross, touching first the forehead ("in the name of the Father"), then the breast ("and of the Son"), the left shoulder ("and of the Holy."), right shoulder ("Ghost"), and finally bringing the palms together in the position of salutation known to the Hindus as *añjali*, which is the classic Christian mudra of prayer ("Amen").

The authors of *The Principles of Tantra* (edited by Arthur Avalon, 2 vols., London, 1914-1916), have aptly cited (pp. lxxi-lxxii) the following statement from the Council of Trent: "The Catholic Church, rich with the experience of the ages and clothed with their splendour, has introduced mystic benediction (*mantra*), incense (*dhūpa*), water (*ācamana*, *padya*, etc.), lights (*dīpa*), bells (*ghaṇṭā*), flowers (*puspa*), vestments, and all the magnificence of its ceremonies in order to excite the spirit of religion to the contemplation of the profound mysteries which they reveal. As are its faithful, the Church is composed of both body (*dēha*) and soul (*ātman*). It therefore renders to the Lord (*īśvara*) a double worship, exterior (*vāhya-pūjā*) and interior (*mānasa-pūjā*), the latter being the prayer (*vādāna*) of the faithful, the breviary of its priest, and the voice of Him ever interceding in our fever, and the former the outward motions of the liturgy." (interpolations by authors of *The Principles of Tantra*.)

As to the historical relationship of the Christian to the Tantric service, that is a delicate matter yet to be investigated.

Chapter-4

Metaphysics of Tantra

Chapter-4

A. Tantra Schools:

Tantra is more a Sādhana system than a mere philosophical discourse. It's a process of identification of one's own potential and actual powers of bodymind complex. To be aware of the power or the realization of power is prior to its deification. Tantra gives both namely, the process of awareness of powers and also method of its deification.

The first portion covers its metaphysics while the second refers to Sādhana system. Any Sādhana system is related with the concept of God, World, individual self etc., and as such, it is based on some metaphysical principles. The Tāntric system has its own metaphysics and Sadhana system.

In course of time of its development, Tantra has developed different schools both in metaphysics and in Sādhana aspect. Saivism, Saktism and Vaisnavism are the major schools of Tantra while Dakṣiṇācāra, Vāmācāra, Mīśra etc., come under its Sādhana aspect.

A new approach has been made here in the presentation of the schools. Details of different schools have been deliberately left untouched as it can only be a transfer of details from one source to this thesis. And secondly, the details are easily available in all books related with this notion. So here we have simply presented those details which are useful for therapeutic aspect only.

1. Metaphysical Schools: Saivism, Śāktism, Vaisnavism:

These three are the major schools of Tantra system. They also contain subjects in it. All these schools and sects differ only at apparent level but their goal is the same, that is realization or in Tantra terms, unfoldment of inner potential energy.

What is the source of creation, maintenance and destruction of the world? It must be higher than everything which makes this

possible. Tantra has accepted the principle of polarity for this Higher Reality. The poles are, in Tantra terms system in everybody life. While the later can be removed by the Sàdhanà mentioned by the system.

For the illustration of the removal of physical-mental diseases, we may here mention the view of Pasupata system. Liberation takes place when the union between the individual self and the universal self takes place. For this, the Pàtanjala yoga system has mentioned the way of suppression of the mental modifications by considering mind as a cause of sorrow or pain.

Unlike this, for the Pàsupata system, yoga means conjunction of the individual self with God.⁴ For this union, according to this system, mind does not prove as hurdles in union but it is an aid through which union is possible.⁵ This reflects its therapeutic value. Suppression of mental modifications leads to many abnormal problems like split personality etc. While sublimation or positive view regarding them results into integrated personality. This fact has been visualised by the Pasupata followers in its early days which proves as a distinct therapeutic contribution of the Tantra schools.

2. Sàdhanà Schools of Tantra: Vàmàcàra, Daksinàcàra and Misra:

Vàmàcàra:

Vàmàcàra: is a synonym of the Kaulacàra. It lays stress on the Wealth (Artha) and desire (kàma). Here kàma is not the gross or physical sexual drive but it is an inherent underlying root cause of all our carvings for worldly objects and pleasures. Beings, one of the constituents of mind, it is natural to have desires. Unfulfilled or suppressed desires lie dormant into the unconscious mind which may sometimes results into distorted form of behaviour. By laying stress on the satisfaction of desires, Tantra releases the Sadhaka from this type of abnormality or all mental disturbances.

Those adherents of Tantra who accept this way of being free from the bonds of desires by their natural satisfaction and still

persist in their effort of working out their liberation are known as kaulas. Kaulas. Kaulas combine enjoyment (Bhoga) with renunciation (Tyāga) and hence they have a very positive and healthy approach regarding life.

There are two classes in the kaulacāra. (1) Purvakaula and (2) Uttarakaula. The Purvakaula uphold the gross indulgence into 5 M's with certain limitations.

They believe that the 5 M's are allowed to be practiced by those who have attained certain level in the spiritual development. The rest are to remain away from this privilege. The mind of a Purvakaula Sadhaka is so pure that there is no possibility of any downfall. This is a standard through which they measure the height of the attainment of the purification of Sādhaka.

Unlike the Purvakaula Sādhaka, the Uttarakaula Sadhaka does worship internally. No external aid is needed for worship. This practice strengthens the power of concentration and also helps in cultivating mental powers.

The real import of this school is that, the remedy of the poison is poison (Visam Visasya ausadham). Even poison can be utilised as remedy if it is correctly applied. This reflects that thing itself is not either good or bad but it is our outlook that makes it so. This leads us to infer that the passions that bind the soul, also can be the aid for attainment of Moksa or liberation. By giving the illustration of poison this school seems to suggest that the mental modification, which generally are considered as poison, as they create suffering can be used as the means of attaining Moksa.

Again, he is known as 'Vira' or 'hero' because he performs practice on cremation ground or Smasāna Sādhana. The cremation ground has here a symbolic meaning. Ordinarily cremation ground is a burning place of corpses. The Sādhaka creates within himself a cremation ground for burning out the dead corpse of desires or vāsanās so that they may not again appear and trouble him.

To overcome all these hurdles is the hidden key to health which is provided by the kaulism which reflects on its therapeutic

aspect.

Daksinàcàra or Samayacàra :

Daksinàcàra is a Vaisnava Sàdhanà system. As Artha or wealth and kàma or desire are the goal of the Vàmàcàra, Moksa or liberation is the destination of the Daksinàcàra. This school is largely based on the Vedic path though the philosophy of this school is contained in the Sanat Kumara Samhità, Paràsara Samhità, Nàrada Pàncaràtra and other Agama texts. There are hard and fast rules mentioned by this system. The gross utilization of 5 M's is strictly prohibited in this system.

According to this system, the Higher Reality pervades everywhere and hence they avoid external worships and favour internal worship which purifies the mind of a Sàdhaka and also cultivates the inherent powers of mind.

Misra:

This school is a synthesis of the Vàmàcàr and the Daksinàcàra. Like the Vàmàcàra, its way to overcome the worldly passions is unique. They gratify the senses by over indulgence and then renounce it completely. So this type known as Siva-Sakti. This also represents a male-female or plus-minus currents etc. The polarity in Tantra is not only rationally acceptable but also has ben propitiated as deity. The same polarity Siva-Sakti assumes the guise of Visnu-Luxmi in the Vaisnavism. There is no difference or no separation between Siva-Sakti or Visnu-Laxmi. In the Saiva schools, Siva enjoys predominant placea while In Sàktism, Sakti enjoys tht status and in the Vaisnavism, Visnu is considered as the Higher Reality.

a. Ultimately Reality and World:

The ultimate Reality is considered as the source of world wheel. A Saivaite school, the Pàsopata and the Saiva Siddhanta calls it Pati (Lord) and kàrana (cause) respectively. In the Vaisnavism it is accepted as Parabrahman while in the Saktism, the same Higher Reality is known as Sakti or energy. All schools have announced ultimate Reality as eternal, unlimited, infinite etc., with one voice.

This Reality is also accepted both as immanent in the world and transcendent of the world.

The transcendental aspect of the ultimate Reality is worshipped by devotee while its manifestation in the form of world, that is its immanent aspect contains the therapeutic value. Now let us see how it deals with it.

In the Kāshmir Saivism and in the Śāktism, the nature of the ultimate Reality is considered as consciousness (cit)¹. Hence, consciousness is the synonym of the Higher Reality. And because of this, being a creation of the Higher Reality, world is also a manifestation of consciousness. The consciousness which pervades the world also resides in body in the form of prāṇa or the vital force. Though prāṇa is one but according to its function, it is classed into five. Harmony between these five-fold prāṇa results into healthy body-mind while ignorance about it or disharmony ends into physical-mental diseases. Tantra has accepted the identical relation between macrocosm and the microcosm or in other words, ultimate Reality and the individual self. Ignorance about this fact creates spiritual diseases (pass) or sufferings which create circles of life-death.

Thus, the concept of the Ultimate Reality in Tantra plays at macrocosmic level in the form of element while at microcosmic level it pervades the body in the form of vital force or prāṇa. When the Ultimate Reality as an element realized at the macrocosmic level, Sādhaka feels permanent bliss. The same feelings occur when the bodily prāṇa are in harmony which result into healthy body and sound mind.

b. Individual self:

The Ultimate Reality which creates the world has not created it with effort but it is just a play which in the Vaisnavism is known as Līlā. The same concept is reflected in the saiva school. As the Paśupata system, system declares, the Ultimate Reality possesses the quality of playing for its own sake.² (Svāntāya Sukhāya) Thus the world is nothing but the play of consciousness. The consciousness or the cause of world process, is one but due to three real, that is, Sattva, Rajas and Tamas it seems to be many.³

Creation takes place when there is equilibration (Vaismyavasthà) in the Sattva, Rajas and Tamas takes place in the Ultimate Reality or in Prakrti.

Individual self is a result of the dis-equilibration of these three reals. Being a creation of Prakrti or energy our body also contains sattva, rajas and tamas as elements of reals. When the dis-equilibration takes place in the bodily sattva, rajas and tamas, which are directly related with the five gross constituents of Prakrti (panca mahabhûta) or in the terms of Âyurveda, Vâta, Pitta and Kapha, results into physical-mental disorders which brings limitations on the flexibility of body-mind complex.

c. Liberation:

Tantra metaphysics deals not only with the Higher Reality (pati), individual self (pasu) and bonds (pasa) but it also deals with how to overcome from the physical, mental and also spiritual limitations or pasu, that is liberation. Liberation according to the Saiva Siddhanta is the end of the sorrow, Duhkhanta.

All Tàntic schools have mentioned the way of releasing the individual self from sorrow. Knowledge is not the only means through which liberation is gained. Tantra advocates over and above the knowledge, the inevitability of grace of god and the constant practise of Sadhana for working out liberation.

Thus, by presenting the metaphysical concept of liberation, Tantra prescribes therapy which removes physical-mental diseases and spiritual bonds. The former can be removed by the application of the doctrine, ascribed by the of renunciation there is a least chance for reappearing the desires in a distorted form.

They also accept renunciation of desires from the Daksina kaulism. The desires are to be renounced after their gratification mentally. Thus they utilize best of the two types of the kaulacàra. This is also again a way of cultivating healthy mind-body outlook and hence has ample therapeutic value.

Thus by presenting the way of worship of the Higher Reality, these schools throw light on the drugless therapy.

B. Tantra Sādhana:

Introduction :

Practice is better than percept. Mere speculation does not lead one to the self realization. Tantra is a system which deals with the disciplinary aspect of realization. Let us see how it deals with the same.

One of the meanings of Tantra is expansion (Ītan = to expand). But expansion of what ? Only contracted things can be expanded or only seed can bloom into a huge tree. Here for Tantra, it is an expansion of the inner potentialities which is lying dormant at the end of the spinal cord or the Mūlādhāra cakra which in Tantra terminology is known as the kundalinī sakti. The process of an awakening or realizing these potentialities is the Sādhana aspect of Tantra. Sādhana stands for activity or exertion (Īsadh = to exert). So in Sādhana, Sadhaka has to follow or to do something (kriyātmakam) for achieving the goal.

There are various ways of realization prescribed by the Indian wisdom. Like others, this Tāntric way of realization is based upon some presuppositions, among them the cardinal one is that, it accepts the physical body both as the residing place and the instrument for the realization of Higher Reality. As the Meru Tantra declares, "Whatever is here is else and whatever is not here is no where". This leads us to conclude the identical relationship between the macrocosm and the microcosm. So for Tantra Shāstra, it is not necessary to be lost or to roam into the vastness of the universe but sādhaaka can realize his nature by concentrating on his own self.

Self resides into the body. So for the realization of former, later should be purified first. So the first step is the purification of body which can be done with external aids and the inner purification of body can be done thoroughness inner worship or meditation. How to do this or which are the essentials of Tantra sadhana ? This can be asked.

Before going to that aspect let glance over one problem which is left undiscussed: i.e. why sādhanā is necessary ? Tantric sādhanā

is not a sādhanā in abstraction but its results and consequences can be realized in everyday life. Tantra sādhanā is basically a sādhanā of Sakti or energy which is required to be manifested according to prescribed systematic practices. Nobody is left out from the clutches of energy. The very term Sakti is significant in this regards. As the Devi bhagvat declares: In the term Sakti, Sasca stands for superhuman powers (Aaisvarya) and kti for the daring (parākrama).¹ Are we not in search of these qualities? We, the lay man, do worship for the fulfilment of the desire for worldly pleasures, while a Tantric initiated sadhaka does this for the sublimation. So here we can get the justification of the significant verse of the Kulārṇava Tantra in which it declares that Tantra gives indulgence or worldly pleasure (Bhoga) and liberation (Moksa).²

How its techniques work, which give such results, generally not possibly to be achieved through other systems? Tantra techniques leads positively to the very source of pleasure, that is mind. As we know, mind is the cause of pleasure and pain. Tantra says that the mind which binds us to the worldly affairs, the same mind can be the instrument of liberation. The potentialities of the mind is immense. We can utilize only the powers of conscious mind which is only a few drops of a sea of mental powers. The rest of the mind, which we care not in a position to utilize, is lying dormant which in terms of psychology is known as subconscious mind. Tantra sādhanā is nothing but the awakening or unfolding of that inner potentialities.

Therapeutically, this aspect is also significant. The findings of Dr. Dasture which³ are published in the Times of India, suggest that the resistance power of mind or will power against disease can prevent the results of the disease like cancer even. And at the same time, a person with a weak mind may become victim of the disease only by mere imagination.³ Will power or the power of resistance against disease is a gift of nature to everybody. In some bodies, it is partially awakened while in others it is more awakened. Tantra sādhanā is basically designed for strengthening the mind including cultivation of resistance power.

How this sādhanā takes place? We come back to our original question. Many essentials are prescribed for the traditional

Tantra sādḥaka. Among them, the basic one is the competence of sādḥaka. As it is said, Tantra sādhanā is just like walking on the edge of major. So for it, guru (guide) is required who can test the fitness of a sādḥaka and then initiate him. Initiation is a passport to enter into the realm of sadhana. After having finished some external mode of worship, guru then teaches some inner aspects of worship in which Nyāsa (*Identification*), Mudra (*Meditation*), Bhuta Sudhi (Purification) of bodily constituents), Prāna pratisthā (Establishment of self) etc., take place. We shall deal with this in detail at proper place.

Now, something about the approach of Tantra sādhanā. Tantra accepts the physical body positively hence it also accepts its impulses and instincts. Generally instincts become the cause of bondage but novel view of Tantra is that by gratification of these impulses and senses, one can transcend the limitation of finite experiences. Of course, this path is a slippery one which can lead one to the downfall if proper care is not taken. Tantra has not overlooked this. According to the nature of mental level of sādḥaka, it has prescribed three ways which are termed as the Pasu vira and divya sadhaka or in other terms Tamasika, Rājasika, and Sāttvika sādḥaka respectively.

In this chapter we shall see about the Tantra sādhanā under two headings, A and B. A consists of the essentials of Tantra sādhanā while B contains the process of awakening the inner potentialities. Now let us proceed with the essentials of Tantra sadhana.

A) 1. Essentials of Tantra sadhana:

Tantric sadhana system is a sea in which the flows of various systems merge. As it is difficult to contain the sea in a pot, so it is difficult to contain all the details in a chapter. We, therefore, limit our task to present introduction of some of the salient features of Tantra sadhana. Sadhana is that which produces results of material or spiritual type. Whatever may be the result, the outer and the inner purification is the essential aspect of Tantra sādhanā. The central point of Tantra sādhanā is to worship deity by becoming deity. It means, as Tantra believes, what man worships is not

that which is something outside but his own consciousness itself. Though there are varieties in Tantra sādhanā, here, we shall mention only those notions which are largely accepted by all. We here first start with the significant place of guru in Tantra sādhanā.

4. Spiritual guide : guru :

In the Tantra sādhanā, guru enjoys the significant status. Though in present times the so-called gurus have emerged out like mushrooms due to lack of proper understanding of the real meaning of guru. The Kulārṇava Tantra, the prime source of this notion, declares that the so-called gurus are so many but the real one is rare. How to draw a line of demarcation between an authentic and Take guru ? The Kulārṇava Tantra has presented certain characteristics for distinguishing the real guru from the take one. What are they ? Before we go to this, let us see what the term guru stands for?

Many definition have been given by different treatise but the Kulārṇava Tantra declares that in the term guru, 'gu' stands for darkness while 'ru' stands for removal. Hence guru is he, who removes darkness of nescience.⁴

Nescience of what ? Like all other systems, Tantra also accepts the identical relationship between the individual self and the universal self. Nescience of this fact is the hurdle in the way of sādhanā. Only realized guru who is but Siva himself or the person who has realized Siva within himself can remove this obstacle and because of this, Tantra sees no difference between the Siva and guru.⁵

If a guru and Siva are identical then why lord chooses to manifest Himself through the medium of guru ? Why should not He manifest directly ? One may have such questions. One of such question is asked by Parvati to Lord Siva in the Kulārṇava Tantra. In response to that question Lord Siva replies that He is subtle, formless and being so, it is difficult to perceive. How then He can be worshipped ? So out of compassion, Lord Siva takes the form of guru. Worship of Him grants liberation and fulfilment.⁶ And being so, it also declared by the same Tantra that the guru is none other than Siva without His three eyes. Vishnu without four

arms and Brahmà without His four arm Faces and Brahma without His four faces.¹² These are symbolic explanations of the various mode of the Higher Reality.

What are the characteristics of such a venerable guru ? This has been explained in almost all Tantras. The list of the qualities of guru is such a long that it takes two chapters in the Kulârnavâ Tantra. Hence it is impossible to reproduce it here. But here we can mention some of them so that the layman can see who can be the real Tantric guru. The first requirement is that guru should be a realized one. Only such person can initiate other person. He also should know the¹³, present and future. He should be acquainted with the science of Mantra and Yantra also. Guru also should have a capacity to purifying the impurities of all kinds of disciple. Such and others are also the qualities of guru described in Tantra. These types of qualities is almost rarely to be found in a man in this age. But if suppose, somebody gets this type of personality, he would surely realize the glimpse of the Higher Reality. And because of this significance, it is declared with reverence that guru can save us from the wrath of even god but nobody can save us from the wrath of guru.⁸ Only such an efficient guru can initiate a disciple. What is the significance of initiation and how guru initiates disciples that we shall see under the title "initiation".

b. Initiation : Diksa

Like guru, initiation is also an important notion in the Tantra sâdhanâ. In the Kulârnavâ Tantra, it is declared that there can be no Moksa or liberation without Diksâ or⁸, and initiation cannot be there without a teacher or guru. So only guru can initiate the disciple for the sâdhanâ according to his competency.⁹

Why initiation is required this can be asked. In response to this, we can say our mind is just like a garden. As in the garden, the poisonous sprouts with the good one, likewise, in our mind also, bad thoughts or the poisonous sprouts come out with the good one, likewise, in our mind also, bad thoughts or the poisonous sprouts of desires also come out. At the time of initiation, guru removes the unrequired things from the mind of disciple

through Sakti pāta. (Transplantation of power). The very term 'Dikṣā' reflects this fact. 'Di' means that which gives knowledge while 'kṣa' means that which removes animal sprouts. The Visvasāra Tantra gives the definition of this term. According to it, Dikṣā means that which abolishes sin and gives divine knowledge.¹⁰

How does guru creates this type of condition or in order words which are the ways through which guru gives initiation ? Three types of initiation are largely accepted in the Tantra sādhanā. The first is Sparas dikṣā or bodily identification to create a type of rapport in the student or sādhaḥ. (Tava kradyam me hradyam dadhami || etc.). The second is Drkṣanijñā, initiation by sight and the third is manasā dikṣā, initiation by thought.¹¹ The same Tantra, the Kulārṇava Tantra, also describes how guru gives these three types of initiation. The first initiation by touch is like a slow nourishing by the bird with the warmth of its wings. In the initiation through sight disciple is initiated as nourishing of the young by the fish through the seeing alone, while the initiation by the thought is like a nourishing of its young by the tortoise by only thinking of them.

Through these ways of initiation guru first removes the impurities and transfers his energy into the disciple, so that the latent power of the disciple can be awakened. But for this, and also as we have seen in the characteristics of the guru, guru should have awakened the Kundilini Shakti. And only this type of realized soul can open the centres of energy of disciple.

To make it more clear, we can put here the simply of a match box. In the disciple, the energy is already there as coating of sulphur on the match box. For the activation of which, requires the external aid which is provided by guru at the time of initiation.

After the initiation, the process of inner and outer purification starts. First purification of body (Bhūta Suddhi) takes place and then purification of mind follows. We shall now see something about Bhūta Suddhi.

c. Purification of body : Bhūta Suddhi :

Bhūta Suddhi is a distinctive feature of the Tantra sādhanā. It considered as an indispensable discipline prior to all rituals. Suddhi

means purification. Especially, in the Tantra sàdhanà, it is believed that each limb of the worshipper should be purified. Only then he becomes fit for worship of divinity. Not only the purification of body, but in the Tantra sàdhanà as the Kulàrnava Tantra declares, requires of five type of purification, which are namely the purification of self of place, of material, of Mantra and of deity.¹⁹

First the place of worship should be sanctified by cleaning sweeping etc. and should be decorated with flowers, incense etc. so that the mind can concentrate on deity. Substance also should be purified by sprinkling pure water. The deity should be purified by placing it on the seat and also by infusing life (prana pratishta). We shall see the details of the purification of self. Self resides in body so first, body should be purified, which in Tantra, is known as Bhūta Suddhi.

Bhūta Suddhi means the purification of the elements of the body. The purpose of purification is to make clean the internal and external atmosphere of sàdhaka's body. The outer purification can be done by bathing etc. and inner by Nyāsa, Prāṇāyāma etc. As Kapali Sastry thinks, "It must be noted here that the purification of the various limbs, outer physical and the inner mind stuff aims not only at the eradication of the narrowing and obscuring influences of the elemental forces and the universal weakness of the lower Nature, but inviting in their place the opposite good influence of the benign forces, the power of the supra physical worlds. That is why in the actual Bhūta Suddhi, every part is offered to deity and the group of deities that are invoked to occupy their places in the body vessel, ādhāra, constitutes indeed the minor gods who are the parivaras (family) of the chosen chief."²⁰

How the process of purification takes place? Our body is composed of five elements namely, Earth, (Prithvi), Āpa (Water), Fire (Teja), Air (Vāyu) and Ether (Ākāśa). Purification or harmony of these is the real Bhūta Suddhi.

According to the Tantra sadhana, the whole process should be done mentally (kalpayet). Sàdhaka has to first imagine the predominance of particular element on the specific part of the

body to which that part belongs, or that particular element is predominant in that particular part of the body. For instance, the earth element starts from feet to thigh, water element from thigh to navel, fire from navel to heart, air from heart to centre of eyebrow and ether is predominant on the most upper part of the body. Sādhaka has to concentrate these elements on their specific parts.

After doing this, he has to imagine the process of absorption of gross element into subtle one, i.e., the earth into water, water into fire, fire into air, air into ether, ether into ego, ego into nature (prakriti) and prakriti into god. While doing so, according to Tantra, he also has to imagine a man who is made out of bodily impurities (Pāpa purusa). The idea of Pāpa purusa or "man of impurities" is an acceptance of fact that prior to the process of purification every sādha is full of bodily as well as mental impurities. As he proceeds through initiation to Bhūta Suddhi, he gradually gets established into his new position of a purified soul with the result that the evils in him, in the form of impurities, gradually fade away. In traditional terminology, it is a process of first drying and then of burning that person full of impurities so that the same person, after purification, assumes as if were a new form altogether i.e. a spiritual form and becomes a spiritual man fit for becoming a vessel or receptacle of spiritual forces of Sakti.

The process of drying away and burning away of the Pāpa purusa should be done with the repetition of the seed letter vāyu, that is, yam, and fire, that is Ram. Now the whole body of the blackman results into an ash. Then with the help of nectar which constantly flows from the Sahasrara, sādha has to build a new pure body in imagination, which should start from Lord of Nature, from nature to intellect, from intellect to ego, from ego to ether, from ether to air, air to fire, fire to water, water to earth, earth to vegetable, from vegetable to food, from food to semen and from semen to purusa, that is I am. This 'I am' is not natural ego. It is a feeling of self-realization.

This is what sādha has to do mentally. Only after this he becomes entitled to worship deity. We can here see the justification of the principle of Tāntric sādhanā, that is to worship deity

only by becoming deity (Devao bhùtvà yajet devam). Therefore, Tantra is a way to raise one's own consciousness to the level of divine.

This practice should be done by sadhaka in daily worship. Therapeutically it also effects the body. According to the Āyurveda, harmony between vāta (Air), pitta (Fire) and kapha (Pahlegm) results into health. These three are nothing but the combination of the five gross elements (Pañca mahābhuta). Purification of these five elements necessarily ends into health. And the body gets fortified against all diseases altogether.

After purification of constituents of body or Bhūta Suddhi comes the Citta Suddhi, purification of mind which should be done through Nyāsa. How Nyāsa is performed that we shall see now.

d. Purification of Mind: Nyāsa:

The process of Tantra sādhanā is from gross to subtle. Being subtle, purification of mind comes after purification of body. This inner purification can be done through Nyāsa. How this purification takes place ?

The root verb of Nyāsa is ŌNyās = to place. With the help of the reference of Kapaila sastriar, we could see that Bhūta Suddhi does not mean only removal of bad elements or impurities but also placing of good thoughts or divinity. After dissolving the sinful body, and building spirirtual body through imagination the body is to be instilled with prana or diety. The process of establishing diety starts with Nyāsa. Like Bhuta Suddhi, this process also should be done mentally.

There are various types of Nyāsa. Namely, Mantra nyāsa, Mahāsodhā nyāsa, Karanyāsa etc. More details about this have been given in to the Kularnāva Tantra. The Nyāsa is done by placing the top of the finger on the various parts of the body. As for example in the Mātrika Nyāsa, alphabets are placed on the limbs of the body. In the esoteric science, letters are considered as the manifestation of Sabda Brahman and being so they are considered as deities. This Mātrika Nyāsa is also bifurcated into tow parts which are namely, the outer Mātrika Nyāsa, (Bahirmātrika

nyāsa) and the inner mātṛika Nyāsa (Ānataramatṛika nyāsa). In the former type, the letters are placed on the limbs of the physical body imaginatively by touching that part of the body, while in the later type they are placed on the six subtle centres, (sat cakras). The details of this, is given in all the Tantric works which are related with Tantra sādhanā.

What is the esoteric significance of this rite ? It is that, the sādḥaka should realize that his essence is Spirit, and body and mind are but its manifestations of the Spirit. All is divine and everything is nothing but consciousness. By Vyāpaka Nyāsa or expanding identification, he mentally spreads the presence of consciousness throughout himself. Then he becomes deva and only by becoming so he can worship deva.

The scientific significance of this rite is that, as we know, man becomes what he thinks. Thought moulds out intellectual, moral character. The transformation of being takes place through the transformation of thought. If we constantly think about the divinity or we think positively, it necessarily results into the transformation of personality. Thus for transformation of human personality into a divine one, Tantra touches at the very root of the process of all transformation and brings about wonderful results. The mortal frame which is considered fake, susceptible to diseases gets transformed into a robust fortified, not easily susceptible to diseases. The therapeutic value of this process is invaluable.

The therapeutic value of this rite also can be applied into Yoganidrā or relaxation. Nyasa also means identification with divine thought in which sādḥaka forgets everything about the worldly affairs. This is the true relaxation and it is considered as the best medicine for the diseases of modern world, which arise from the mental tensions, which are namely blood pressure, heart attack, etc. So, that way, Nyāsa can be equated with the systematic method for inducing complete physical mental relaxation.

After purification of body mind in the divine body, sādḥaka installs the life. This rite, in Tāntric terms is known as prāṇa pratisthā. Now we shall see about it.

e. Installation of life : Prāna pratisthā :

Prāna Pratistha is a unique contribution of Tantra sādhanā to the oriental sādhanā system. In the external worship, at initial level, sādhaṅka worships an image of Siva or of Viṣṇu or of devī. At little advanced level Yantra, images of deities like Siva, Brahma or Viṣṇu present higher reality into gross form. A step advance, in this direction of "gross to subtle" is presented through are placing image by Yantra, which is a diagram on the plate with seed letters or numbers symbolizing the union of the gross and subtle or individual self-consciousness with the divine consciousness, worship takes place instead of image worship.

Tantra believes that mere image or diagram does not itself become effective. It should be charged with the life force. This does not mean that they are dead. According to Tantra, there is nothing like a dead thing. What here happens is, the sādhaṅka, through concentration establishes his life force into that Yantra and worships it. So here actually what sādhaṅka worships is his consciousness only.

Like external worship, this rite also takes place in internal worship. After the purification of body and mind, sādhaṅka installs the life force in his divine body.

But what is the significance of this rite ? According to the Śākta Tantra, everything is a manifestation of energy. It is present everywhere but an ordinary man does not consider this fact. So at the initial level, he has to imagine that the object of worship is alive. One should not worship what is inferior to him or her. The worshipped should be superior and must be conscious in nature. And because of this, Prāna or life should be infused into the worshipped one. But this is not a process as Arthur Avalon says to spread a butter on a bread' but as he thinks the significance behind this rite is 'to enliven the consciousness of the worshipper into a realization of his presence'.¹⁴

How this process should be done ? This should be done with the help of Mantra, Japa and Puṣcarāṇa. Now let us see something about it.

f. Mantra:

The place of Mantra in the Tantra sadhans is very significant. Not a single Tantric rite is done without Mantra.

The root verb of Mantra is *Öman* means to meditate. In the Nyàsa, we saw the significance of thought power. Mantra is nothing but the condensed form of that thought power. And that is why proper pronunciation and concentration on it gives result.

In the Mantra sàdhanà Mantras are divided into four groups namely friendly, serving, supporting and destroying. At the time of intuition, guru according to the nature of disciple gives the proper Mantra and that Mantra should be done constantly. This is known as Japa.

g. Japa:

Japa means repetition of Mantra. This process cultivates power of concentration. After sitting in any convenient posture in the silent place, sàdhakà recites the Mantra into which he has been initiated.

Japa is of three kinds: (1) *Vàcika* Japa in which Mantra is uttered audibly, (2) *Upàmsu* Japa in which only movement of lips is visible but no voice is heard and the last one is (3) *Mànsika* Japa which is considered as the highest form of Japa in which only repetition takes place with a single mind. One thing should be remembered here that only mechanical repetition does not create anything for the effective result, one has to do Japa with faith, aspiration and devotion.

The aim behind the Nyasa and Pràna pratishà is to feel divinity within oneself. How Mantra-Japa does this that we shall see in the word of Aurvindo, "The word is a sound expression of the idea. In the Supra physical plane when an idea has to be realized, one can, by repeating the word expression of it, produce vibration which prepares the mind for the realization of the idea. That is the principle of the Mantra and Japa. One repeats the name of the Divine and the vibration created in the consciousness prepares the realization of the Divine".¹⁵

h. Bhàva : Mental disposition

In the Tàtric sàdhanà, Bhàva or mental disposition plays a prominent role. As we have seen throughout the essentials of Tantra that, Tantra lays stress on the mental worship. As has been accepted in the psychology, we become what we think. Thought has such a power that it can transform the personality of the thinker. The reason for this is that thought is directly related with mind and mind is considered as the moulder of personality. Tàtric sàdhanà based upon the principle. Due to significance of thought power Tantra lays stress on mental as pot in sàdhanà.

Tantra has accepted the importance of mental disposition (Bhava) in sàdhanà to be extent that—as Rudra yāmala declares deity does not reside in a tone or clay, but it abides in a mental disposition or Bhava.¹⁶

The purpose of sàdhanà pre-supposes a duality of worshiper and worshipped. Tunduality exists till the identity between the devotee and the deity is established. Tantra has prescribed the different stages between the way of duality to identity. There stages are according to the mental tendency (Bhàva) of sadhaka.

Tantra has prescribed three kinds of Bhàva, namely, Pasu bhàva, Vira bhàva and Divya bhava which are also known, as Tāmasika, Rājasika and Sātvika respective. Now we shall see the details about this.

Pasu bhava :

Jiva is known as Pasu. The root verb of the term Pasu is Ōpas means boltage. The person who is in bonds of desires or Vāsanās is Pasu. In the early stag of life, individual being is known as Pasu. The reason is that, at that time he under the control of sense organs and desires.

In this Bhàva, Tamas (Inertia) element is predominant. Lethargy (Ālasya) and rigidity (Jādyā) is the characteristic of this Bhàva. Due to nescience (Ajñāna), which is also one kind of bondage (pasa) person plays only at gross or external level. Due to lack of this competency, he can not penetrate deeper into the subtle meanings of the sadhana process.

In the Kulārṇava Tantra, eight bonds (pāsa) have been described. Which are namely, Dayā (Mercy), Moha (Delusion), Bhaya (Fear), Lajjā (Shame), Ghrṇa (Nausea), Kulam (Heredity), Shīla (Character) and Verna (colour complex). In other Tantras, generally three kinds of pāsas have been described namely, Mala (Impurities), Karma (Past deeds) and Māyā (Delusion) Mala is conceived as the highest among all these three. So for overcoming the Pasubhava, removal of Mala is necessary. And for removal of it, Dikṣa, initiation is best means.

Vira bhāva :

At this stage, Rajas (Activity) element is predominant. Those who can discriminate the real pleasure from pain and also who has got control over senses, greediness, lust, anger etc. he comes under the realm of Vira bhāva.

Only Vira sādḥaka are permitted to utilize the 5 M's in sādhanā because they have controlled their senses, and in such a sādḥaka there is no possibility of decline.

After having controlled the senses, sādḥaka enters into the third Bhāva, that is Divya bhava.

Divya bhava :

As Raja is predominant in the Vira bhāva, here in this Divya bhāva, Sattva element is predominant. At this level as the Mahānirvāna Tantra declares, sādḥaka transcends the duality (Dvandvātīta)¹⁷ of worshipper and worshipped.

So thus, sādḥaka who has transcended the dualities and has established the identity with the desired deity is known as he who is possessed of divine bhāva.

These three Bhāvas are stages in sādhanā. It is the victory of sādḥaka in which sādḥaka always goes upward from Paśu to Vira and from Vira to Divya bhava.¹⁸

Conclusion:

Like realization of Reality, unfoldment of physical and mental powers is also one of the goals of any sādhanā system. Sādhanā

is a key through which one can open the treasure of infinite powers. Tantra has done this job very significantly and because of this, Arthur Avalon says "Infact both popular and estoteric Hinduism is, in its practical aspect, largely Tàntic".¹⁹

Throughout the Tantra sàdhanà, we could see that the process of Nyàsa, Bhùta Suddhi, etc. is nothing but the various technique for mastering and unfolding physical-mental powers. This requires purified body-mind complex which is possible through Mantra and Hathayogic àsanasa (postures) and prànyàna which are inclusive aspects of the Tantra sàdhanà.

Through Hathayogic techniques body becomes free from diseases and through Mantra sàdhanà, mind becomes calm and concentrated. This also secures the therapeutic aspect. Consistent positive thinking which is possible only in concentrated mind, can heal any diseases. This is the core of the thought therapy which has been found out in present times.

For the desired results in the Tantra sàdhanà, ritual commences with the resolution (Samkalpa). This resolution strengthens the mind of a Shàdhaka and also cultivates his Will power which is the source of all power.

The result of Tàntic sàdhanà is very quick, effective and enduring. At the same time, there is also a limitation of it. This sàdhanà as the Kularnava Tantra declares, is to walk on the edge of a razor, so for safety of a sadhaka, an experienced and authentic guru is required which is rarely possible. So for a Tantra sàdhanà, it is really a problem to have a realized soul as guru.

Tantra sàdhanà is a tree which is full of flowers and fruits of supernatural powers but a guru prevents his disciples to utilize it for mundane pleasures. Sadhaka attains the power in the process of awakening the Kundalini. How this process takes place that we shall see under the title "Awakening of the Kudalini Sakti".

B. Awakening of the Kundalini Sakti :

Introduction

In this age of science, security of a living being is a burning problem. Man has controlled almost all properties of the nature

and even then we are always in danger. Why is it so ? What is that small loose screw that brings about the whole mechanism of the world into a critical condition ?

It is nothing but the imbalance or disharmony between body-mind, intellect emotion in man. We are running madly after the materialism. The unfulfilled desires create imbalance between intellect and emotion in man which leads one to behave in unnatural way.

Technology has found out those types of weapons through which most of the part of the world can be demolished within a short time. If the possessors of these weapons do not think moderately (moderation also comes from harmony between intellect and emotion) then it will prove to be dangerous for the whole of humanity. As Gopi Krishna thinks the whole humanity is dangerously sleeping on the latent volcano.

This latent volcano of nuclear power can burst out at any time. It is an energy which can be used wither for constructive or destructive purposes and this sheerly depends on one's mental tendency.

Like atom, our body also is a foundation of energy which is rather more powerful than nuclear power which in Tantra terminology is known as the Kundalini Sakti. This energy is an universal energy and it is generally considered as latent and requires to be awakened. Awakening of it, is the goal of Tantra sadhana.

Energy as an ultimate Reality of universe is a meta-physical doctrine underlying Tantra system. This meta-physical doctrine has also been accepted by science. Till now, this concept was considered as purely spiritual but now it has entered into the territory of science. Now the time has ripened for the working out compromise of spiritualism and scientific materialism. Spiritualism has to come down from the solitude of the summit of a mountain and has to settle its status in the midst of layman. At the same time, science also had to expand the narrow limits it has imposed upon and has to accept that which is not observable.

This universal energy resides in a body in the form of Kundala (Coil) hence it is known as Kundalini. The awakening of energy

is possible either through grace of god or through sadhana.

In the case of grace, disciple is directed by guru or god through the medium of intuition while in sàdhanà, sàdhaka has to follow certain rules and regulations. He has to keep his body-mind pure and perfect with help of Nyàsa, Mudràs, Hathayogic techniques etc. Moreover, guru also has to keep constant attention on each and every step of the progress of sàdhaka.

Which are the theoretical and practical basis of the Kundalini yoga and how the awakened power can be applied in a modern world ? Now we shall see these possible questions in the section which follows.

1. Theoretical and applied aspects of the Kundalini Yoga

a. Theoretical aspect :

The term "Kundalini" comes from the term 'Kundala' means "coiled". The universal energy, though it is postent lies latent at the end of the spinal cord in a centre known as Muladhara cakra, in a coiled form like a serpent, hence it is known as Kundalini.

As has been accepted by science, only one-tenth of our mind is active while nine-tenth of it is dormant. Our present development is the result of that one-tenth awakened part. In course of time slowly but steadily we cultivate our powers but the Kundalini yoga process enhances this cultivation as it deals with the expansion of inner latent powers.

The theoretical basis of this yoga is identification, based upon the principle of microcosm and macrocosm, i.e. all that is contained in the universe is also present in man. Man, therefore, is a miniature universe. At first, this principle seems to be a caprice or merely an idea of a fertile mind, but when we go into deeper and deeper it proves to the most creative and fertile principle.

There is one and same universal consciousness in minerals and man. These two differ only in expression of the levels of consciousness. In minerals, it is less expressed and hence it looks as gross while in man, it expresses in more degrees that in

minerals, and hence, it seems living or conscious. The present state of development of man is a result of a series of transformation or cultivation of consciousness. The previous stages of man are located in amoeba, from amoeba to fish, fish to ape and ape to man. This shows that the later transformation is superior to the former one. The process of cultivation of consciousness adds one more possibility in the series of transformation that is from man to super man. Tantra leads us to this way through awakening the Kundalini Sakti. Unconsciously, we are on that way of transformation but a Tantric sadhaka does this with full awareness and does it speedily. With the awakening of latent individual consciousness, sâdhaka gets identification with the universal consciousness of which he is a part and parcel.

But how this identification between microcosm and macrocosm takes place ? Like other systems, Tantra has also accepted that the root of the universe is ultimate Reality which is one without second. This Reality for Tantra is either Siva or Sakti both of which are identical as moon and its beam. This Siva and Sakti are the static and kinetic aspect of one Reality respectively.

As in the moving wheel, there is a point which is static around which the whole wheel moves. In the same way, Siva is the static aspect of Reality around which the dynamic or kinetic Sakti moves, So Siva being a static aspect of Reality is considered as the centre of the universe as a wheel.

This Siva wills to be many. Then His willing issues forth into a projection in the form of Sakti. The Siva or the ultimate Reality is possessed with a Fiat; Universal Will power and Wills to be many. (So akâmâyat, ekoaham babu syâm). Sakti manifests Herself in the planes of consciousness or lokas. These planes of consciousness are not one and the same but they differ by the degrees of density of matter out of which they are composed. It means we can say briefly that the creation manifests in increasing degrees of density or complexity. This process starts from the most subtle element and culminates in the creation of gross worlds, that is prithvi etc. which composed of extremely dense matter.

The above mentioned process of creation taking place in macrocosm, also takes place in the microcosm simultaneously. Like universe, our body is also made out of five gross elements with their essence, that is Tanmatra, are located at certain points on the body namely skull, throat, heart etc. These points are in Tantra terms known as centres or cakras.

These cakras or the centres of consciousness are like powerhouse from which each and every cell gets its power. But how this power flow? This power flows through the medium of Nādi or veins which are subtle in nature. Through Nadi, life currents flows and vitalize the body. According to the Tantric treatise, there are 72,000 nādis in body. Among them fourteen are important. Three among fourteen are the prime one, they are namely, Ida, Piṅgala and Susumnā. Among these three, susumnā is the most significant.

Centres are seven in number. Though there is a controversy about the number of centres. For some it is nine while seven is generally accepted. These cakras are namely Mūlādhāra cakra, Svādhīsthana cakra, Manipur cakra, Anājata cakra, Visuddha cakra, Ajñā cakra and Sahasrara cakra. Their corresponding areas in physical body namely, sacrocoaygeal plexus, cardiac plexus, throat, eye-brows and skull region respectively.

The seventh centre, that is, Sahasrara where the manifestation of consciousness is at the highest level, is considered in Tantra as the abode of Siva while Mūlādhāra at the end of the spinal cord is considered as the abode of Sakti. The place of centres and nadis, is in Tantra sādhanā very significant. All the detail description about centres and nadis we shall see in the second section of this thesis under the title "Tantra anatomy". To avoid the repetition of it, here we shall mention their names and only required portion of details.

Now let us come to the original point, that is, identification between the microcosm and macrocosm. As mount Meru is considered as the axis of universe, likewise, spinal cord is considered as the base of physical body. Because both universe and body has been made out of five gross elements. The predomi-

nance of five elements is felt at different centres or cakras. The five gross elements, Prithvi, Āp, Tejā, Vāyu and Ākāśa with their respective Tanmātras namely Gandhi, Rasa, Rupa, sprasa, Sabda are felt on the Muladhara, Swadhisthana, Manipura, Anahata, Visuddha, respectively.

Energy is the support or base of universe. The universal energy, that is, Kundalini also rests coiled at the Mūlādhāra cakra, at the end of the spinal cord. This is the point, which in Tantra terms is known as 'kanda' from which all 72,000 nadis spring and spread out in the whole body. The sympathetic channel, the para-sympathetic channel and the spinal cord has a great resemblance with the Idā, Pingalā and Susumnā nādis. The mental and vital currents flow into these Idā and Pīṅgalā nādi respectively. There are also two subtle nadis namely Vajrā and citrini in the Susumnā nādi.

The Mūlādhāra cakra is the meeting place of all these channels. There is also an upward base triangle in the centre, inside it there is a Svayambhū līṅga on which the Kundalini rests coiled.

The latent Kundalini can be awakened through various Hatha yagic practices and Tantra techniques. The awakened Kundalini pierces centres one by one and ultimately reaches to the Sahasrāra cakra. In its upward journey and union between Siva who resides in the Shasrara and Sakti takes place in the Sahasrara cakra.

Sahaja yoga is the synonym of the kundalini yoga. In the ascendance of the Kundalini while piercing all centres, She absorbs all elemental forces which are ascribed to the centres. At the Sahasrara centres, She absorbs herself in Siva. A cosmic intercourse takes place in that centre. There issues nectar from Siva. Kundalini drinks this nectar and comes back to Her own place, that is the Mūlādhāra cakra. In her journey towards descent, it revitalizes all the centres with the ambrosia and ultimately goes to her original abiding place i.e. the Mūlādhāra. This process of Sakti going upward and coming down after union and intercourse with Siva has to be repeated again and again till a stage come when she rests permanently with siva in Sahasrara and decent movement stops once for all. This depends upon the

intensity of *sadhāna* and competency of *sadhaka*.

It is said that when man awakes for worldly affairs, Kundalini sleeps. But when Kundalini awakes, man sleeps for worldly affairs. It means the power he gets from the awakening of Kundalini, expands the horizons of his ordinary limitations attached with his ego. His self gets expanded to its capacity with the result that the power he gets from the awakening of Kundalini, he does not utilize for his personal pleasures but for the whole humanity. It is useless to sit, on the solitude of mountain after liberation as some yogis do. But the real Tantric *sadhaka* uses his powers not only for the satisfaction of his mundane pleasures but for the liberation of whole humanity. Lord Buddha after enlightenment posed a question as to how he differs from ordinary person, who pursues wealth or fame or worldly pleasures if he enjoys his realization himself alone. And then he decides to share his pleasures of self-realization among all people.

How the *Sat cakrabhedana* takes place, we shall see under the title "applied side of Kundalini yoga".

b. Applied side of the Kundalini yoga:

The term 'Kundalini yoga' is a compound of two terms namely, Kundalini and yoga. We know the meaning and significance of Kundalini. And yoga means union. Here the term 'yoga' does not denote merely union but it also represents the process which leads to union.

Realization or identification with the Higher Reality is the goal of the Kundalini yoga. This goal also can be achieved through the Raja yoga, Mantra yoga, Hathayoga etc. The goal is the same but they differ only in the way of approaching the goal.

The Rāja yoga accepts the aid of intellect for reaching the goal while Mantra yoga does this by instrument like words. The Hathayoga is mainly concerned with the physical body. They believe in the interdependent relationship of physical body and the subtle body in which centres of consciousness are situated. So the application on the gross body affects the subtle body. The Hathayoga does this by the application of *Mudrās*—*Prāṇāyāma*

etc.

The Kundalini yoga deals with the seat or centres of consciousness. Centres and nadis are located in the subtle body or the prāṇāyāma sarira. According to the Tantra, among 72,000 nadis, which are spread throughout the body, only fourteen nādis are important. And among fourteen only three namely, Ida, Pingalā and Susumna nadi are significant. Ida and Pingala run along with the Sūsumna on the left and the right side of it respectively. The root of all nadis which in Tantra terms is known as kanda is in the Mūlādhāra cakra. The Kundalini Sakti lies dormant at the end of the Susumnā channel. How to awaken this sleeping Kundalini, we shall see it now.

Tantra has worked out this process thousands of years back. Though this process is a difficult task but it gives everlasting eternal joy to sadhaka. The pre-requirement of this process of awakening the Kundalini, is the guidance of an expert teacher who should be well versed in this type of practice who can efficiently guide in this process till it comes to its natural fruition. The objective of this process is to achieve purity of physical body-mind complex. And hence the second pre-requisite is firm determination or strong will power.

As we have seen in the theoretical aspect, kundalini sleeps dormant at the base of the susumnā nādi. So the door of this nadi should be opened otherwise the aroused power is likely to pass either in the ida or in the Piṅgalā nādi.

There are various processes for awakening the power mentioned by the different Tantra treatise. Here we shall see this process in the words of Arthur Avalon. In the words of Arthur Avalon, "The sadhaka sits in as prescribed asana and steadies the mind by concentrating between the eyebrows. Air is inhaled and retained; the upper part of the body is contract and the prana (upward breath) is checked. The air thus prevented from going upward tends to rush downward; this escape of vāyu as apana is also checked by appropriate contraction of the lower parts. The vāyu thus collected is directed towards the Mūlādhāra centre and the mind and will are concentrated upon it with the

result that due to the frictional pressure of Prāna and Apāna held tight together, intense heat is generated and this again arouses the sleeping serpent, kundalini, which when so activated is drawn upwards. By mental concentration with the aid of Mantra, the jīvatma which is of the shape of a flame is brought down from the heart to the Mūlādhāra and, so to say, united and moved along with awakened Sakti. As its coils are loosened, the aperture to the door of Brahman, Brahmadvāra, at the mouth of the Susumnā, is opened and through the Cotrine nādi within the Kundalini is led upwards."²⁰

After piercing the Mūlādhāra cakra, with the aid of the concentration, Kundalini goes upward and pierces all centres and pierces all centres and unites with Siva at the Saharāra centre. The significant point, here, is that in the ascendings journey. She absorbs all the gross elements ascribed on the centres and baths in the ambrosia issues by Siva in the Sahasrar cakra. In return journey She revitalizes all centres and comes back to the Mūlādhara cakra, her abiding place. This process should be repeated again and again.

The return journey of Kundalini invokes various centres on its way to Muladhara and endows the sādha with the following qualities.

When it attains to Sahsrara on its upward journey, sādha becomes completely liberated from the limitations of body-mind and space around. In the return journey while passing through the Ājñā cakra endows the sādha with the quality of success of words, means whatever he speaks turn out to be ultimately true. It confers the vak siddhi.

When it passes to visuddha cakra, sādha endows with a unique types of oration which whence he utters, keeps the hearer spell-bound. When it passes through Anahata cakra, it confers unique power of discrimination by which sādha comes to know what is good and what is bad or what is eternal and what is non-eternal. When it comes to the Manipura cakra, sādha is endowed with the knowledge of various vidyas or abilities without being taught. When it passes through the swadhisthana cakra,

sadhaka is endowed with poetic sense and the subtle techniques of yoga. When it comes to the Mūlādhāra cakra, sādḥaka enjoys health. These siddhis are again criteria to what an extant the sadhaka has been able to penetrate various cakras.

These are the powers which normally do not manifest in a layman. It manifests only after piercing one after the other centres. At the end of this process, sādḥaka gets totally transformed. He feels the presence of the supernatural energy or sakti within himself.

C. Therapeutic application of the various aspects of Kundalini Sakti :

Hitherto we have been discussing about the theoretical and applied side of the Kundalini yoga. Awakening of the inner potentialities is not an easy process. The Tāntric way of awakening is very effective because it deals directly with the mental aspect. It is purely a psychological process. This fact also can be seen in the Tāntric process of worship of deity should be done mentally (Bhavayet, Kalpayet) and it is considered as the highest form of worship.

It is said that the process of sādhanā gives some supernormal powers to sādḥaka. What is the use of these powers if suppose the sadhaka sits idly in solitude on the peaks of the mountains ? How these power can be applied in day to day life ? A layman is least concerned with whether Kundalini is there or not. He is always in search of those aids through which he can be get relief from the pain resulting from the complexities of life. Physical disorders and mental ailments are the unavoidable aspects of life which add to the complexity in life. Is there any Tāntric way through which the process of awakening of Kundalini can be utilized to come over the evils of life ?

Yes, from the description of Tantra centres and nadis we can work out one hypothesis which is related with the therapeutic aspect which runs as follows:

The awakened Kukndalini can be classified according to its various aspects of manifestation. They are namely Kriyāvatī.

Varanamayee, Kalâtma and Vedhamayee.²⁵

Manifestation on the plane of physical body, which is related with the Hathayoga, is known as the Kriyâvati aspect of the Kundalini sakti. On this stage, sâdhaka does manifold exercises automatically under the influence of new awakened power. The Hathayogic exercise directly affects the spinal column of sâdhaka not in a destructive manner but their effect on system gives health to him.

The second aspect is Kaiavati. Etymologically, Kalâ means phase. It may be a phase of time of moon etc. Kundalini is a fiery energy. It's phase of flame in body takes the form of bile or pitta. The place of bile in body is very significant. All roots of diseases are located in the unbalanced secretion of the first of the stomach or jatharâgni. The taken food is consumed by the fire at the navel region. Aroused power of Kundalini strenghtens this fiering capacity of the bile or pittakalâ which ultimately results into healthy body.

The Vedhamayee aspect is the highest manifestation of Kundalini sakti which covers all these three aspects. This aspect deals with the piercing of centres. Bhutajaya or the complete control over bodily constituents is the result of this aspect. Sadhaka can change the proportion of bodily constituents according to his will. So that he can himself establish a harmony between five elements which is the pre-requirement of health. This indicates its tremendous therapeutic value.

Like all these three the Varnamayi aspect also has the therapeutic aspect very much valuable in modern times.

This Varnamayi aspect manifests on the Visuddha cakra which is considered as the abode of Sarasvati. The corresponding area of the Visuddha cakra in physical body is the throat region through which the pronounciations of letters (Varnas) or sound manifest.

All letters have their origin in the Nâda tattv or Sabda Brahman. There are four stages through which nada passes till it manifests into the spoken words or Vaikhari. These stages are

parà, pasyanti, Madhyamà and Vaikhari. According to the Sanskrit linguists, the Vaikhari or the spoken words manifests through the fifty letter which are known as Varnas. Among fifty letters, there are sixteen vowels namely a, ā, i, ī, u, ū, r, ri, ṛ, e, ai, o, au, m, h. The twenty-five consonants are divided into five groups which runs as follows:

k	kh	g	gh	n
c	ch	j	jh	n
t	th	d	dh	n
ṭ	ṭh	ḍ	ḍh	n
p	ph	b	bh	m
hard		hoft		nasal

Last nine are semi-consonants namely, y, r, l, v, s, ś, h, ḷ and ks is a compound of K and S.

Now let us come to the Tantra anatomy with a view to work out the hypothesis related with healing aspect. As we know, according to the Tantra, there are two channels, Ida and Pingalā running along the middle channel, that is, susumnā, left and right side of it respectively. These two microcosmic channels are believed to be related with the macrocosmic moon and sun. And being so, Ida nadi contains mental currents as it relates with moon while Pingala nadi contains vital currents as it relates with sun. Thus, in brief, mental and vital currents flow through these two channels.

Disharmony between these two currents is also one of the salient cause of disease or split personality. Because disharmony between these two currents create disharmony between emotion and intellect which are directly related with Ida and Pingala respectively.

All these details lead us to conclude that if the flow of the mental currents or emotion goes in excess degree in the Ida nadi, man becomes more imaginative or fanciful or behaves like caprice or in other words, he becomes incapable of taking rational decision. At the same time, if the flow of vital current goes beyond proportion, man becomes more vigorous or rigid. Both these

The five Principles	Idā (the moon) Vowels: Svarah					Pingalā (The sun) Consonants: sparsah				Susmnā (fire) semi-consonants and sibilents					Remarks	
	Visuddha cakra Short Long Neuter masculine feminine					Anahata Manipura sthana				Swādhi- Moolā shara dhara		Ajñā	Sahasarara			
Air	a	ā	e	k	c	t	o	ta	p	o	y	o	s	o	o	Sense of touch and power of grasping
Heat	i	ī	ai	kh	ch	o	th	ph	o	r	o	o	kd	o	o	Sight and power of motion
Earth	u	ū	o	g	j	o	d	d	o	i	o	o	o			Smell and power of excretion
Water	r	ṛ	au	hg	jh	o	dh	dh	o	bh	o	v	s		o	Taste and sexuality.
Ether	ḷe m	lṛ h	o	n	n	o	n	n	o	m	o	s	o		o	Hearing and speech
	Pingalā Idā Susmnā Idā					Pingalā				Susmnā						

This chart is taken the "Devatma Sakti (Divine power) by Swa mi Visnuthirih.

situations are not good for healthy body-mind complex. Excess of any current hurts the personality of man.

The Varnamayi aspect of the Kundalini throws light on the way to come out from this calamity. As the Sārada Tilaka, a Tāntric work declares, the pronunciation of letters or vārnas is possible with the help of air or vayu. According to the same treatise (patal-II) the effect of sound of all the vowels are mainly connected with Ida. Again short vowels pertain to Idā and four vowels e, ai, o, au, to Susumna. The nasal sound pertains to ātmā and visarga to sakti. The short vowels are of masculine gender, the long vowels are of feminine gender and the four a, ai, o, au are of neuter gender. Twenty-five consonants from k to m are mainly connected with Pingala and sibilants are connected with Susumna. Again, all consonants from k to ks with short vowels with Ida and ai, o, au with Susumna.²²

This allows us to conclude that certain letters contain vital force while others contain mental force as their origin is either in Pingalā or in Idā.

Now from the given details we can assume that if, suppose, subject A is suffering from the vital deficiency. This vital deficiency can be recovered by the correct pronunciation of those letters which are related with Piṅgalā nādi.

According to the chart which is worked out by the Sārada Tilaka, the pronunciation of ā and a create a different types of effects as former is related with the Piṅgalā nādi and latter is related with the Idā-nādi.

A	Short vowel	Ā	Long vowel
	Piṅgalā nādi		Idā nādi
	Vitality		Mental energy

In the same way deficiency of mental currents also can be removed by the pronunciation of letters related with the Ida nadi. Thus through pronunciation of letters, harmony between emotion and intellect can be established, which is the pre-requirement of the integrated personality.

The Varnamayi aspect among all these aspects is more advisable. In former three, the person has to undergo certain rules and regulations which are difficult for all, while in the Varnamayi aspect, a healer can pronounce the letter to a patient according to his requirement and help him in strengthen his longevity. Patient has not to do anything as everything depends on the healer.

This is just a hypothesis, which leads us to the drugless therapy. How far it is effective on how far their results are permanent? The answers of all these questions demand the further research in this regards. If it works effectively, is it not a most beneficial applied aspect of the Kundalini process?

Conclusion :

It has been proved by the modern science that we can utilize only little amount of energy given by the nature. Rest of the energy lies dormant. This same concept is mirrored in the Tāntric concept of the Kundalini. The goal of the Kundalini yoga is the unfolding of this power or to be conscious about and realize this inherent latent power which in Tantra terms is known as the awakening of the Kundalini Sakti.

Tāntric way of unfolding of inherent power is very effective and at the same time dangerous also. Sādhaka should have tremendous patience persistence and resistance to face any kind of consequences resulting from the process.

Before Kundalini awakens sādhaka has to attain certain level of physical and mental preparations.

The Kundalini resides in the subtle body but how the subtle body can exist without any residing place? Physical body satisfies this requirement. So for reaching the subtle, it is necessary to come over the limitations of gross. It means body should be purified or made devoid of any disease.

Mere healthy body would not help. There is also one entity which is more subtle in nature than body and also inter-related with body, that is mind, which also should be pure and healthy. We are not affected only by physical sufferings alone but mental ailments are also one of the root causes of our sufferings. Hence

like body-mind also should be kept pure and concentrated.

By considering all these points, Tantra has worked out its way of attaining concentration in that form in which its proper application necessary ensures health of both body and mind. This is really a significant aspect of Tantra sadhana which puts Tantra on a higher stage.

How Tāntric way of concentration or meditation purifies and strengthens the body-mind complex that we have seen under the title "Essentials of Tāntra sadhana". There we have seen the therapeutic value of Nyāsa, Mudrā, Bhuta Suddhi etc.

This inner purification does not takes place automatically. It requires sadhana or constant practice. Initiation is required to enter into the realm of sadhanā. Only realized guru or guide is entitled to initiate the novice.

Thus in Tantra sādhanā, the basic requirement is to have an efficient guru, not only at the initial level, but at level of awakening the Kundalinī or piercing the centres.

The awakened Kundalinī ensures health of body-mind complex and also releases its latent powers which again fortifies body and mind against any attack from inside. The various aspects of the awakened Kundalinī namely, Kriyāvati, Kalāvati, Vedhamay and Varnamay are not also devoid of therapeutic value. The therapies which are worked out here are hypothesis based on the basic concepts of these aspects.

The goal of Tantra sādhanā is out and out spiritual. Its goal is very lofty but not without any sound principles. For the attainment or for the realization of the source of universal energy, it has not neglected the physical body. On the contrary it has worked out those techniques or process through which the gross body or the microcosm can be sublimated into macrocosm. This is the most positive and priceless contribution of the Tantra sadhana in the realm of therapies.

Chapter-5

Applied side of Tantra: Dance, Music, Astrology, Sarcraments

Chapter-5

Introduction:

Application of any principle is one of the deciding factors of its soundness. For instance, in the realm of science, the law of gravitation is considered as an authentic or universal law. The reason of it is that it deals unexceptionally with all objects of the universe. Whatever we throw upward necessarily comes downward. In addition to this type of instance, we may add the law of causation which states that every effect presupposes a cause, or in other words, cause necessarily creates effect. All these laws are universal and their application decides the soundness of that branch of knowledge from which they emanate. Being a system, Tantra is also based on some principles among them the cardinal one is the principle of cultivating of energy. Significance of energy in life needs no illustration. Life or energy is the core of universe. Tantra has found out the source of energy, not only that, but it has also mentioned the way of cultivation and channelization of it.

For Tantra, energy is the Ultimate Reality. Everything is but its manifestation. It creates, sustains and destroys. How does it this work? Energy does this through vibration and movement which are its unavoidable aspects. So these two also can be the aids of the realization of energy. Indian arts like of Music and Dance are based on these two aspects respectively.

The root of the term Nratya is Nruta means "to act" which is highly related with movements. A dancer through different gestures (Mudrās) or movements creates his/her own universe on the stage. Through the rhythmical movements he/she is attuned to the entire cosmic movements. In this way he/she establishes an identity of the finite with infinite which is our goal.

Like dance, music also ends into realization. In music, notes (svara) enjoy significant status. In Tantra, these svara are

considered as the Nāda sakti or cosmic, sound which is one of the aspects of the Kundalini sakti, the universal power. As in Vedas, so in Tantra also, Sabda is considered as Brahman or energy. Being a manifestation of the Nāda sakti, each and every letter is highly powerful. This power is felt through the medium of vibration. And because of this we feel the impact of the arranged Raga of music.

Each and every atom of the universe, being a manifestation of energy, issues vibrations. We are not the only entity in the universe but there is a wide planetary system also. This also, like us, constantly issues electric currents. According to the Tāntric principle of identity between microcosm and macrocosm, attraction and repulsion takes place which becomes the deciding factor of the favourable and unfavourable impact of the planetary system. Harmony between vibrations of the subject and planets give favour while disharmony gives unfavour. The Indian astrology is based on this Tāntric principle.

Apparently this leads us to conclude that we are slave of the planetary system. But according to Tantra, it is not so. Our mind is more powerful than planetary system. Power is there but it is latent in mind. A siddha or an expert can compel the planetary system through his cultivated mental powers.

The primitive man believed that the cause of pleasure and pain is the super natural power. For the benign influence on the important occasions of life which start from conception to cremation ground which are sixteen in number (Sodasa Samskāra) are still being celebrated with the help of Mantras and Yantras.

Like above mentioned aspects, the influence of Tāntric principles are also discernible on other aspects of life but within the limit of this is, we shall see something about the above mentioned aspects. We shall proceed with the dance—an expression of innate creative energy.

A. Dance:

For Tantra, energy is the Ultimate Reality of which constant movement is the unavoidable aspect. Tāntric Lord Siva is consid-

ered as the lord of dance, Nrityamurti or Natraja-a master dancer.

Rhythm both in universe and in dance also is unavoidable aspect. In universe, we see the process of creation, maintenance and destruction in a rhythmical order being constantly done by cosmic Reality. Beyond these there are also two aspects which are namely, grace (Anugraha) and concealment (Tirdhdhàna). These five fold aspect of Reality is symbolized in a posture of Natraja, the great dancer.

The dancing posture of hands and legs of Natràja is not also out of significance. This posture suggests Siva as most beneficial to mankind. The right hand with drum and fire symbolizes the hand of protection (Abhaya) while left hand with dandam is a hand of bestowing the boons. This is the description of the exoteric form of posture Natràja. Now let us see what it esoterically represents.

1. Esoteric meaning of the dancing posture of Siva :

The esoteric significance of the posture Natràja suggests the Tàntic principle of identity between microcosm and macrocosm or Individual self and the Universal self. As the universe is the stage of cidambram of Lord Siva on which He dances, the same cidambaram is located in the body, that is, his heart where God's image eternally dances for destroying the Mayà and release the spirit within. As Rao Gopinath has rightly observed, "Siva is a destroyer and loves the burning ground. But what does He destroy ? Not merely the heavens and earth at the end of a kalpa, but the fetters that bind each separate soul. Where and what is the burning ground. It is not the place where our earthly bodies are cremated, but the heart of the bhakta, the devotee laid waste and disolate. He brings not peace but a sword. The place where their selves are destroyed signifies the place or state where their ego, or illusion and deeds are brunt away: that is the crematorium, the burning ground where Sri Natraja dances. I

Siva as destroyer is known as Mahākàla who even in the work of destruction, constantly creates. The consort of Siva as Mahakala is known as 'Tandava'. Either way it is the movement of energy that brings about change in the cosmos. Now let us see

something about the dance of Kàli.

2. Dance of Kàli or energy: Lāsya Nrītya :

We have got glimpse of Siva as lord of dance. Through His dance, He does five fold activities namely, creation, maintenance, destruction, grace and concealment. He does this with the help of his consort, Sakti Kàli, who inspires Siva to express any gesture.

Sakti is also a dancer. She dances on the prostrate body of her lover, Siva. This posture is also highly significant. Sir John Woodroffe has beautifully disclosed the significance of the dancing posture of Kàli, or energy. In his own words, "She is naked being clothed in space alone (Digambara) because Great power is unlimited; further she is Herself beyond 'Mâyà' that power of Herself with which she creates all universe. She stands upon the white corpse like body of Siva. He is white because He is the illumination. (Prakàsha), the transcendental aspect of consciousness. He is inert because He is the changeless aspect of the Supreme and She is apparently the changing aspect of the same, being twin aspects of the one who is changeless and exists as change."²

Tantric principles are not related only with the esoteric meaning of dance. But its technique, like the Hathayogic postures (àsanàs), pranayama are also connected with the gesturers (Mudras) of dance.

Dance and Hathayogic technique :

Dance is not merely a movement of body but it also represents the exposition of the moods and emotions of mind. For perfect presentation of moods, mind should be calm and this calmness can be gained through pràṇāyāma. Like calmness, the flexibility of body is also required in dance. The Hatha yogic asanas secure this. So with the help of àsanàs and pràṇāyāma, a dancer can express his/her emotions perfectly.

The above mentioned fact is realized by Zdena Bronislaw Ska Deylova. Her experience has been published in the "Yoga" journal of April, 1978, in which she has accepted that the practice

of the Hathayogic asanas helps in the fulfillment of the dance. In her own famous dance "yoga-etude" she has presented a series of sixteen asanas.³

Dance is an expression of innate creative power, that is known as Kundalini. The activity of life force in universe is the cosmic dance which is constantly being done by universal power. Awakening of Kundalini also manifests as a creativity in an artist. In the case of dance, the dancer through the gestures realizes the nectar of Bliss which arises from the union of Siva Sakti, the perfect couple of universe. We close this point with the words of a dancer, "Siva and Parvati have been the inspiration of all dances, the perfect male-female, the dual personalization of the Absolute".⁴

B. Music:

Like dance, music is also a divine manifestation of universal Energy, Kundalini. The core of music is Nāda, which is one of the aspects of Kundalini, that is Nādamayee.

Perfection bestows bliss. In music perfection rests in the Nada tattva. When a singer gets identification with Nāda Sakti, he enjoys the same bliss as a yogi or the dancer feels at the peak of perfection. The Nāda Sādhana awakens the latent potentialities of Sādhaka. How it awakens, that is expressed by Svāmī Prajnananada. "It is the fact when the Sādhaka, artist and the sympathetic listeners realize the real essence of the Nada tattva, they dive deep into the mysterious kamakala or Kundalini and come to know or urge for knowledge of the ideal of music, stirs the sleeping coiled Kundalini or subconscious mind, and consequently, gives a start for the ascent of the divine basic energy. Gradually the awakened energy penetrates all the force centres of the body (of the spinal cord) and finally reaches the thousand petalled lotus of the Sahasrāra, the seat of all consciousness, Parama Siva and then sādha artist and the sincere music listeners feel divine communion of the jivatma and the paramātmā. They then attain the fruition of the Nāda Sādhana, which enables them to cut as under the knots of nescience and realize the transcendental Brahman. And this stage can be said to be the ulti-

mate achievement (param prapti) of the practice of music."⁵

This leads us to conclude that liberation through music lies in the realization of the Nāda tattva. The Nāda tattva which is core of music is also an unavoidable aspect of the Tantra system. When we are going to discuss music as the applied side of Tantra, it will not be out of place to have a glimpse of Nāda tattva.

1. *Theory of Nāda :*

Like Vedic philosophy, Tantra also believes in the world of name and form. (Nāmarupatmāka jagat. As far as the world of name is concerned, Nāda is its essence. Sabda which is the essence of either, is the manifestation of Nāda tattva. Like Ether, being an originator of it, Nāda tattva is also all pervading entity. It is the first modification of ultimate Reality.

There is nothing in this world which has no name. Because very creation depends on name. Volition (Echā) of creation is prior to any concrete creation. Universe was first Willed by Cosmic Creator (Sa asākāyata) then creation took place. Our willing can be expressed only through words or letters. That's why lord Himself has said in Veda that the creation has come out from speech or vāk. She is the creator of universe.⁶ It further declares, "The knower of the Vedas knows that the world is a manifestation of Vāk."⁷

Now let us see how music views Nāda tattva. In the Samgita Darpana, Nāda tattva is highly esteemed, as everything depends on Nāda. Nāda or Sound is the essence of either which is first among all objects of the world. So it is said that all gross objects are made up of Nāda or sound and hence Nāda is the source of the universe.

The root of the word Nāda, is Nad means the unstruck voice (Anāhata Nāda). This unstruck voice manifests in notes, sentence or language which is known as struck voice (Ahata Nada) because while speaking the outgoing air strikes the vocal chord and creates sound which is classified by Tantric seers as "struck-voice" (Ahata Nāda) These two types of Nadas are also mentioned by the Samgita Darpana and Samgita Makaranda.⁸

For Tantra struck voice (Āhata Nāda) is Vaikhari, one of the stages of Vāk. The rest stages are known as Parā, Pasyanti and Madhyama, and unstruck voice (Anāhata Nāda) is a para va. A musician starts his Sādhana from struck voice and gradually develops this music to attain the goal, that is unstruck voice, or Anāhata Nāda, or vaikhari to Parā vāk. Now we shall see something about the concept of Nāda according to Tantra.

2. Concept of Nāda in Tantra:

Awakening of kundalini is the core of Tantra Sādhana. When the Kundalini awakens, a yogi hears the unstruck voice (Anāhata Nāda). This happens only when prana [vital force] flows from Susumnā instead of Idā and Pingalā. A great radiance arises from Nāda which manifests as Bindu or dot. This Bindu is divided into three aspects, that is, namely, will (icchā), knowledge (jñāna) and action (kriyā). Hence, Nāda tattva, the all pervading entity becomes source of will, knowledge and action which are the pre-requirement of every creation.

In Tantra, Bindu is considered as highly potential. As a drop of semen (virya) cast into ovum and united with female ova can result into a creation of a new personality or as a seed has a potentiality to result in a huge tree, likewise, the Nāda which is the same as Bindu is highly potential. Tantra sees no difference between Nāda and Bindu.⁹ Svāmī Prajñānānada has quoted a beautiful verse which declares the characteristics and significance of Nāda.¹⁰

From this we can conclude that the Nāda of music is but the reflection of Tāntric notion of Nāda. Nāda is the soul of music but for the manifestation of soul, body is required. Soul Nāda manifests through the body Rāga. Rāga is the means through which Nāda manifests. Being a container, Rāga also plays prominent role in music. So let us have a glance over the theory of Rāga.

3. Theory of Rāga:

Rāga is the body of soul Nāda, which means through Rāga, Nāda manifests. What is the meaning of Rāga? One may have a question. In the treatise on music, Rāga is considered as some-

thing that colours the mind with some definite feeling a wave of passion or emotion.¹¹ Each and every Rāga has potentiality to create some emotions or feelings both in the singer and the listener.

But how Rāga originator. Many theories have been given for this. Some of them lay stress on their base in the Tantric legendary god, Siva and Sakti, in which they are accepted as the creator of Rāgas. Amongst all Ragas six are considered as major Rāgas.¹² Which are namely, *Sri Raga*, *Vasanta*, *Bhairva*, *Pancama*, *Megha* and *Natanārāyana*. It is believed that first five ragas are emanated from the Siva Tandava while the last raga came out from the mouth of Prāvati, Sakti, when She performed the Isya dance. Many difference of opinions are found regarding ascribed to siva or natraja. The origin of the science of music and drama, Siva, the cosmic dancer is known as the arc dramatist and the whole of the Nāṭya Śāstra (embracing singing, dancing and dramatic representation) is derived by ancient legend from this great agod (Mahādeva). According to this legend, the rāgas are said to have been derived from the union of Siva and Sakti (female energy) Prāvati or Gīrī-jā. From the five faces of Siva at the beginning of His dance (Nrattārambh) came out of five ragas—Sri rāga, Vasanta, Bhairava, Pancama and Megha. While the sixth rāga Nāt-Nārāyaṇi came out of the sixth mouth of Pārvaṭi (Gīr-Jāya), the daughter of the Himalaya, when she performed the elegant lasya.¹³ Like Samgita Darpana, Suresh Chandra banerjee also accepts the Tantric god siva as the originator of rāgas. In his own words, "Siva and Sakti are the two fundamental principles of the Tāntric philosophy. In the musical lore, too, there is a tradition that Rāgas and Ragains which form the basis of vocal music, emanated respectively from Siva and Sakti. According to one tradition one rāga emanated from each mouth of Siva and one rāga from the mouth of Sakti."¹⁴

When music is highly related with Tantra, then let us see whether ragas have any relation with centres, (cakras) ascribed by Tantra, or not ? If it is so, how they are related ?

Rāgas with reference to centres or cakras:

The gross universe has come out from the five gross ele-

<i>Five faces of siva</i>	<i>Premordial element</i>	<i>Bija Mantra</i>	<i>Cakra</i>	<i>Rāga</i>
1. Sadyyojāta	Earth	Lam	Muladhara	Sri Rāga
2. Vamadeva	Water	Vam	Swadhisthana	Vasanta
3. Aghora	Fire	Ram	Manipura	Bhairava
4. Tat-Purusa	Air	Yam	Anahata	Pancama
5. Isana	Ether	Ham	Visuddha	Megha

ments (Panca mahā bhūta) namely, earth, water, fire, air and ether. In the world of name (Vānamaya jagat) these elements are represented by the seed letters, lam, Yam, Ram, Vam and Ham respectively. These seed letters are inscribed on the five centres of energy (cakra) in the subtle body which are namely, Mulādhāra, Svādhisthāna, Manipura, Anāhata and Visuddha cakra. One of the five gross elements along with the rest is predominant in each of the centres respectively, i.e. earth along with other elements is predominant in Muladhara Water in Swadhisthana etc. Not only centres, elements is predominant in Muldhara Water in Svāhistahāna etc. Not only centres, elements and seed letters but the musical five major ragas are also believed to be related with the five centres of energy. Svami Prajñānānda has worked out the chart which runs as follows:

Among the five centres, the Visuddha cakra has been considered as the abode of Saraswati. The goddess of music. This centre which is also known as lotus has a sixteen petals from which the sixteen musical notes are produced which are namely : (1) Pranava (the mystic syllable om), (2) Udgitha (a portion of Samveda), (3) Humphat (Mystic syllable used in incantation, (4) Vausat, (5) Svadha and (6) Svahā (Exclamation used in offering oblation to the deity), (7) namas the term used in connection with the name of diety to signify veneration), (8) Amrita (ambrosia). The seven musical notes namely (9) Shadaja, (10) Rishabha, (11) Gandhara, (12) Madhyama, (13) Pancama, (14) Dhaivat, (15) Nisada, (16) Bisha (poison).*

Rapport with Nāda, (Nādānusandhāna) is a unique gift given by Tantra for salvation. As we know and feel that mind is very unsteady. In Sādhanā, mind is required to be fully concentrated and calmed. Tantra says that music is the easiest way through which one can easily concentrate one's mind. This has been beautifully explained in the Nadabindu upanisad.¹⁶

This lead us to conclude that, the Nāda Sādhanā of music can be the means of awakening the Kundalini Sakti. Thus music is one of the Tāntric way of realizing the identity between the macrocosm and the microcosm.

C. Astrology:

Suppose that one car is going on with the speed of 120 km. and suddenly the driver, suffers from a hallucination, sees, as if there is dusty board with "Stop, danger ahead" inscribed on it. Driver stops the car and in his great astonishment there is a big valley just a few kilometers from his car. Then he tries to find out the board but in his utter surprise there is no board at all. In this situation what would he think? This event can be judged differently as depending upon one's mental state and his conception.

It is certain that when he sees a valley near him, he definitely first of all, would think that he is saved miraculously. A theist views this event as a grace of god. A scientist would certainly think that he is saved accidentally while an astrologer sees the impact of planetary system behind this event. But all these views culminate to one point, that is, there is something which is invisible yet effective. A theist considers it as a grace good or a scientist considers as a mere accident, while for an astrologer it is an influence of planetary system. Tantra considers this 'something' as an influence of energy. How it considers that, we will explain in the sequel. But before we do that let us be aware of the relationship between Tantra and Astrology.

The title given in the beginning of this point declares that astrology is derived from the Tantra. Now let us see which are the common points between these two aspects.

Astrology is based on astronomy. In astrology, it is believed that each and every object feel impact of astron (stars-planet). This is nothing but the reflection of the Tāntric principle of identification between macrocosm and microcosm. Whatever is in universe also exist in human body.

Because of this identification, Tantra considers body as a miniature universe and univore as a body of Siva. The universe which lies in the body can only be seen by the yogic vision. In the cosmic vision (Visvarûpa darsana) Lord krisna has shown to Arjuna the fourteen bhuvanas in Him. Each and every person has got this type of potentialities but its expression requires Sadhana.

Swami Vijnanananda in the foreword of the Brhatjatakam very

beautifully reflects the base of astrology as resting on vedantic principles which are exactly same as those of Tantra system. Let us see in his own words, "There are two broad and rational principles on which astrology is based. The first principle upon which the science of Astrology rests, is that of Vedānta, that the whole universe is actually what the term implies a unity; and that a law which is found in manifestation in one portion of the universe must also be equally operative throughout the whole. While the heavens form the macrocosm, man is the microcosm, Each man is a little world exactly representing the universe. While all seem quiet without there is an active world within. Such a world is visible to the inner sight of a yogi. These laws which are operative among the planetary bodies are also in force amongst ourselves.

The second principle is that, by a study of the motion and relative positions of the planets, the operations of these laws may be observed, measured and determined."¹⁷

Common principles between two systems do not necessarily lead us to conclude that one is derived from another. When we say A is derived from B, it means A necessarily pre-exists in B. If we apply this fact to our title, it suggests Tantra is much older than astrology in terms of antiquity. Now let us try to see this.

Veda can be divided into six limbs which are known as Vedāṅga. They are namely phonetics (Śikṣā), Rules for sacrificial acts (kalpa), Meter (Chanda), Etymology (Nirukta), Grammar (Vyākaraṇa) and Astrology (Jyotiṣa). In the Brahtjātakam these limbs are equated with the six limbs of Veda puruṣa in which Jyotiṣa or astrology is considered as the eyes of Veda puruṣa.¹⁸

Veda is the gift of the Āryan people. In the "antiquity of Tantra" with the help of the reports of excavation of Harappā, we have tried to prove that the Tantric germs were deeply rooted into the soil of India before the Āryan came into India. So being a limb of Veda, astrology has a later origin than Tantra. This fact leads us to infer that Āryans might have borrowed the Tāntric principle of identification of microcosm and macrocosm and also of the influence of energy. They might have modified it and applied it in the

field of astrology.

How the influence of energy takes place, for this we have to see the theory of atoms and its magnetic currents.

This universe, including physical body and planetary systems have been made out of five elements (Panca Mahabhūta). Any object can be reduced into atom which is nothing but full of electricity or energy. Sir James Jeans, with the help of researches made by Rutherford establishes this fact. "Thanks mainly to the researches of Rutherford, it has now been established that every atom is built up entirely of negative charged electrons, and of positive charged particles "Protons"; matter proves to be nothing but a collection of particles charged with electricity.¹⁹

This atom is nothing but the little magnet. Swami Abhedananda has tried to prove this with aid of the Newton's law and from this, he has also logically derived the fact that being a combination of atoms, human body and earth etc. are also a big magnet.²⁰

In previous paragraph while explaining the constitution of universe, we have made reference of five gross elements (Pañca Mahabhūta) among them ether is the most subtle one, and also all pervading entity. From this we can say that in universe, there is nothing like Vacuum but is only an ocean of ether. Planets are very far from human territory. They are not dead but gigantic magnets. Sun is the soul of the planetary system around which the whole system rotates. This system has its own velocity and motion distributing their magnetic currents in the ocean of ether. Being a magnet we also throw the currents in the ocean of ether. Harmony between these two currents creates favourable results and disharmony results into misfortune. How this happens is described by Padhey, S.K., in his book "Astrology".²¹ All these things establish that being a magnet, planets do have their impact on worldly objects. It is also, at the same time, interesting to note that all planets do not have one and the same type of influence. Some planets are considered as hot, i.e., Mars, Jupiter, Sun while some are as cold namely Moon, Saturn etc. Their impact is felt according to their nature.

COSMIC CONNECTION

Plexus	Letters	Elements (Tridosha)	Planet	Cosmic	Gem	Human system	Na- ture
1. Mūlādhāra	Vam; Sam; Sam; Sam	Pitta	Mars	Yellow	Coral	Marrow	Hot
2. Swadhisthāna	gam; bham; man; yam ram; lam;	Papha with much yāyu	Moon	Orange	Pearl	Blood	Cold
3. Manipura	dam; dham; nam tam; tham; dam; dham; nam; pam; pham	Pitta	Sun	Red	Ruby	Bone	Hot
4. Anāhata	kam; kham; gam; gham; nam; cam; cham; jam; jham; nam; tam; tham	Vata	Saturn	Violet	Blue	Nerves	Cold
5. Visuddha	am; am; eam; im; im; aim; yam; ym; om; rm; oam; lam; rm' m; ham oam; lam; rm; m; ham	Vāta &	Venus	Indigo	Diamond	Sperm	Cold
6. Ajna	Ham; ksm	Kapha Sapphire	Jupiter	Blue	Yellow	Fat	Hot
7. Sahasrara	All letters	All the three elements	Mercury	Green	Emerald	Flesh	Cold

This chart is taken from the 'Illustrated Weekly of India, Vol. II, August 29, 1982 by
Kadamath, with little modification from original.

Like planets, there is another significant concept in astrology, that of zodiac, which in terms of Indian astrology known as Râsi. These are twelve in number and they are considered as the limbs of the body of the kâla purusa or Time-person. The twelve zodiac namely, Mesa, Vrisabha, Mithuna, Karkat, Simha, Kanyâ, Tulâ, Vrischika, Dhanu, Makara, Kumbha and Mina are related with head, face, chest, heart; belly, waist, pelvis, secrets, two thighs, two knees, two legs, and to feet respectively.

In galaxy, these zodiacs are made out of constellations. There are twenty-seven in number and each has got four feet. These are equally divided amongst the twelve zodiacs. Each planet rules over one or more zodiacs, i.e. Mars rules over Mesa and Vrischika, Venus rules over Vrisabha and Tulâ. Mercury rules over Mithuna and Kanyâ. Moon rules over Karkat. Sun rules over Simha. Jupiter rules over Dhanu and Mina and Saturn rules over Makara and Kumbha.

Our body also feels the impact of zodiac system on that part which is ascribed in the body of Time-person. For instance, impact of Mesa on head. Vrisabha on face etc. When a malefic planet is in any sign, the part of the body characterised by that sign gets afflicted. And when a benefit planet rules any sign then the corresponding part of the body work effectively.

All these things leads us to believe that the influence of the planetary system on body-mind is an unavoidable aspect of life.

The influence of planets on particular constituents of body (sapta dhatus) and also their connection with three humours of body (Tridosâ) can be seen from the given chart. In this chart, relation between centres, gross elements, planets etc. have been mentioned which is published in August, 1982 issue of the Illustrated Weekly of India, which is adopted here with little modification. Here letters, which are ascribed on the centres, are added, which is not given in the original chart, with a view to work out the hypothesis regarding the therapeutic aspect which is referred to in conclusion.

D. Sacraments :

It was the belief of primitive an that they were surrounded by super natural powers which were their cause of pleasure and pain. In the previous concept, that is of Astrology, we could see that because of the relation of identification between macrocosm and microcosm, we feel the impact of universal forces. And hence, on the important occasions of life, for benign influence of powers, which were termed as deities were and still being invoked.

The Hindus Social System has accepted some occasions of life as important which are sixteen in number which is known as sixteen sacraments (Sodasa Samskàra). Tantra has also accepted the concept of Sacrament but unlike, the former system, it has accepted only ten basic sacraments.

The Mahànirvāna Tantra is the source of the Tāntric concept of sacrament. But one may have a question why sacrament should be performed ? What is the purpose behind it ? The Mahànirvāna Tantra (M.N.T.) views the sacrament as a means of physical-mental purification.²²

Which are the ten sacraments prescribed by the M.N.T. ? These sacraments are namely (1) conception, (2) pregnancy, (3) simantonnayana, (4) birth, (5) giving the child's name, (6) it's first view of the sun, (7) first eating, (8) tonsure, (9) investiture and (10) Marriage.²³

What should be done before the celebration of these sacraments ? The M.N.T. has laid down some rules and regulations for it. According to it before performing any sacraments, the kausandika rite is necessary to be performed, in which the lord fire is asked for protection and boons. Lord Brhaspati is also requested for the protection of sacrifice.²⁴ Lord Indra, Agni, maruta, Brahma, Vasus, Rudras and Prajāpati should be worshipped for grace which may give prosperity.²⁵ All these things should be performed in prescribed manner for success in the beginning of sacraments.²⁶ Now we shall see the brief description of all sacraments given by the Mahànirvāna Tantra.

1. Garbhàdhàna Samskàra : Conception:

In this sacrament, the different deities are requested to give good child. First five deities (pañca deva) namely Brahmà, Durgà, Ganesa etc. should be worshipped. After that eight powers (Asta Sakti) should be propitiated. In this sacrament, Lord Visnu is also asked to grant the power to conceive. Tvastrà, for giving the limbs to the child. And Dhàtā is requested to give power to bear.²⁷ Then Sinivali, Sarasvatī and Asvinas are asked to support the womb.²⁸ And at the end of ceremony, Visnu is again propitiated for excellent son.

2. Pumsavanana Samskarā : Pregnancy :

This sacrament takes place after the third month of conception. After finishing the daily duties, the husband should worship deities. After this, the wife is asked to drink the special type of curd which is made out of cow's milk. Then the kurca bija Hum and Mâyā bija Hrīm is recited for the protection of womb from ghost, pretas and pisācas²⁹ (malignant spirit).

3. Simantonnayana Samskàra:

This rite should be performed in the sixth or eighth month of pregnancy. The same rite takes place as it is mentioned in the putha savnana sacrament. Moreover, three oblations to Visnu, Sūrya and Brahmā should be offered. And then it is requested to Visva-Karma for safe delivery.³⁰

4. Jata-karma Samskàra : Birth:

This rite takes place immediately after the birth of a son. The father performs a Dhārāhoma and gives live oblations to Agni, Indra, Prajāpati, Visvadevas and Bramā for vigour, vitality and firmness of child.³¹

5. Nāma-karana Samskàra : Giving the child's name:

This sacrament should be performed after the sixth or eighth month of birth in the case of son. While in the case of girl, this

takes place immediately after Birth. In this sacrament, all rivers are asked to bestow grace for the attainment of Dharama, Artha and Kāma.³² Then five oblatios are given to Agni, Vāsava, (Indra), Prajapati, Visva-devas and Brahmā. After that, father takes his son in his lap and speaks his (boy's) name into the right ear.³³

6. Niskramana Samskāra: Its first view of the sun:

For a daughter there is no Niskramana Samskāra.³⁴ But in the case of boy, this should be performed in the fourth or sixth moth after birth.

In this rite, after having attended daily duties, the father should, after bathing worship Ganesa and then son should be bathed adorned with clothes and jewels. Then his father requests Brahmā, Visnu, Siva, Durgā, Indra, Vāyu, Agni, Varuna for the protection whenever he goes out from the house. Then, father takes his child to show the sun.³⁵

7. Anna-prāsanna Samskāra: First eating

When the child becomes six or eight months old, this, rite should be done. First of all dieties are worshipped. Then father should meditate on the devi Annadā (Giver of food) and offer her five oblations. After that pâyasa (Rice boiled in milk with sugar and a little ghee) should be put into the child's mouth by uttering the Mantra of oblation of five vital airs.³⁶ Then a little rice and curry should be put in the child's mouth.

8. Cūdākarma Samskāra : Tonsure :

This sacrament takes place at the age of third or fifth year. All deities should be worshipped first. Then after performing all rites given in the scriptures, the father should request to omnipresent creator for well-being of a child.³⁷

9. Upanayana Samskāra : Investiture:

This sacrament takes place at the age of eight. After performing the rite given in the scriptures, the guru gives him a knotted girle. Then boy should pronounce, "Hirim", may this auspicious

girdle be propitious".³⁸ Then the sacrificial thread is given to child. After this, the oblations are offered to all deities. Then guru whispers the pranava mantra (Aum) in the right ear of a child. Guru, then, recites The Gâyatri Mantra for the attainment of progress of a child in life.³⁹

10. Udvâha Samskâra : Marriage:

In this sacrament, first of all, all deities are worshiped. Then after having completed all rites in the scripture, Lord Prajapati is asked for the accomplishment for the desires of newly wedded couple. Then at the end of the ceremony, devi Raja-Rajesvari, Kali, Bhuvanesvari etc. are requested for the protection of couple.⁴⁰

Thus, the description here given shows that on every occasions of life, deities are invoked for the benign influence and also for the removal of evil impacts. Here we have mentioned only that part of the sacrament which is directly related with the influence of energy. And rest of the part which is related with ritual is omitted.

Conclusion :

The contents of this chapter point out the widespread area of life which is influenced by the Tântic principles. Man is not merely an animal but he is something more than that. That something is expressed by his cultural, religious, social activities like arts, sacraments etc. Tantra has not left this area also. Its principles, namely influence of energy, identification between macrocosm-microcosm, the concept of mind-body purification etc. are largely applied in all these activities. How these principles are applied in dance, music, astrology and sacraments that we have already seen in this chapter.

All these above mentioned aspects are also can be utilized as health giving techniques. In the definition of healthy body-mind complex, many factors are to be considered. Among then flexibility of body and calmness of mind are the deciding ones. Dance gives both of these. In dance, dancer has to do various

types of backward, forward, sideward movements which keeps body flexible. Secondly, dance gives health like the Hathayogic postures (Āsanāsa). The dancing mudrās have great resemblance with postures. So while, doing mudrās, a dancer does āsanāsa automatically, which give him/her therapeutic results. So dance makes body free from diseases by keeping it in constant movements.

Not only movement of body but in dance, expression (Bhava) also is very significant. If suppose a dancer is presenting an expression of Rādhā, he/she becomes one with Rādhā. This identification with only one concept cultivates the power of concentration which prevents the wastage of mental energy which generally flows through the various modifications of mind. It help keeping one away from distortion of mental energy and thus keeps one mentally healthy.

Like dance, music also secures the therapeutic value. Music gives calmness to mind to both singer and listener. This calmness of mind is highly required when most of our diseases arise out of mental tension.

As being a resemblance with the Hathayogic postures, dancer gets its therapeutic result. Likewise, a musician gets the healing effects of prānāyāma. The therapeutic value of prānāyāma needs no example. As we know prana and mind go together. By controlling one, other can automatically be controlled. So if the speed of prāna is under control, becomes steady and concentrated.

In the presentation of Rāga, the practice of Kumbhaka, (retention of air) is highly beneficial. So for being a good singer, it is pre-requirement to have control over technique of Prānāyāma. This practice of Pranayama prevents the ailments of Nādis-bodily channels which makes body undiseased and healthy. The Ghernada Samhita also supports this view by declaring that, the regular practice of Kumbhaka keeps body-mind healthy.

The role of astrology in are of therapeutic is different than that of dance and music. It not only gives the aapy Therapybut it also predicts the diagnosis of diseases. How it does so ?

In the chart attached in the concept of astrology we saw the connection between letters, Tāntric centers, human system, Tridosa element etc. From all these connection we can construct one hypothesis which runs as follows:

As we know the place of zodiac in the Indian astrology is very significant. Different letters are ascribed to all zodiacs. If suppose subject A is born under the influence of Aries. The letters ascribed to Aries are A, L, I. According to the chart, A is related with Visuddha cakra, L is with Swādhishthāna cakra while E again with Visuddha cakra. If we apply the Tridosa elements which are related with this cakras, we can say that, this subject may have a constitution of Vāta and Kapha. He may be subject to that diseases which are related with the constitution of Vāta and Kapha. This hypothesis can be applied in the area of all zodiacs.

Secondly, it also gives the prediction of diseases by considering the movement of planetary system. Every being born under one sign or zodiac which is governed by one planet. There are nine planets, in system which are inter-related either with the relation of friend, enemy or neutral. In the movement of planets, if suppose a planet comes in a sign which has a relation of enemy with the Lord of the zodiac, it gives unfavourable results to the subject. So from the calculation of the movement of planets it can be predicted the favourable or unfavourable time of a subject for the treatment of the disease to which one is subject. To prevent the evil influence which are arise from the disharmony certain Mantras are prescribed. Removal of evil influence also can be done by wearing pearl, gem, diamond etc., but should be properly charged with Mantras otherwise, it would not give any results. So thus astrology and therapy are linked with Tāntric practices with a view to diagnose correctly the diseases and to prescribe proper remedy for disease.

Like dance, music and astrology, sacraments also secure healing value. As the Mahānirvāṇa Tantra declares, sacraments are designed for the purification of mind-body. That purified body-mind complex is the source of health.

As we have see all sacraments should be done with the help

of Mantras and sacrifice (yajña), Pollution of atmosphere, which is also one of the cause of diseases, can be removed by the vibration of Mantras and flame of fire of sacrifice (yajña). This pollution less atmosphere gives health to subject and the people living around it.

This is how Tantra is mainly preoccupied not only with spiritual uplift of the individual but also his physical well being. The basic assumption of Tantra is not only yoga or mediation but bhoga or enjoyment also. Only yoga leads one to abstraction and away from life while only bhoga or indulgence in worldly affairs weakens the body-mind. Tantra by uniting yoga and bhoga makes life purposeful and worth living.

Chapter-6

Degeneration of Tantra

... **... to the ...**

Chapter-6

Introduction:

Can Tantra practices be one of the deciding factors of a person's political position ? At first this question seems to be absurd but when we go into deeper, it ceases to be so. How Tantra plays prominent role in a political life that has been shown by Mr. M. P. Pandit, a renowned author in his book, "Tāntric Sādhana".¹

In the very beginning of his book 'Tāntric Sādhana without giving the name of the politician, he has mentioned that some time back he met one person who was the brother of one politician, who told (to) the author that his brother was suffering from incurable disease and hence he was sent abroad for further treatment. The cause of the disease is very surprising. He told the author that in election one of his rival had applied black magic or Tantra vidyā for the death of his brother, but due to grace of his brother's guru that magic instead of bringing about death has appeared as incurable disease.

In democratic country when the prosperity of layman is dependent on the policies pursued by leaders then what is the future of that country where leaders are elected not by merit but by application of magical powers? Being a citizen of this country, it is really a pathetic condition for us if it is true. But as far as our point is concerned we are least related with it. What is significant for us is that how political position can be gained through Tantra vidyā? The following point will provide that link.

Tantra is basically a sadhana for energy. Tantric seers were aware about the fact that during sādhanā, sādhanaka has to face some obstructions. To curb those obstacles, seers have prescribed some techniques like killing (Mārana), Hypnotism (Vasikarana) etc. But tragedy started when these techniques went into the hands of immature sadhakas or laymen. They for the satisfaction of their personal purposes, applied them on their rivals considering them as obstacles in their way of success.

The above mentioned illustration of a politician is enough to show the misutilization of Tāntric techniques. Moreover, this also reflects efficacy of Tantric Vidya.

Tāntric tradition has been passing under such unique condition. Due to misutilization of it, the very term "Tantra" shocks the nerves of many. Majority of the human race will turn its face by considering it as obnoxious. Only rare people will accept it as a science of awakening or cultivating inner potentialities.

So both negligence and acceptance is enough to create a conflict in layman whether Tantra is as sacred like Veda, or is it a cheap literature of ghost and goblins which teaches one to do anti-social activities ?

Before we come to any conclusion let us see why layman and sometime scholars also, turn their face from Tantra literature ! Which are the responsible factors which common professor Cowell to write as, "Some years ago, the Tantras form a branch of literature highly esteemed though at present much neglected".²

Many reasons can be given for the degeneration of Tantra. We shall deal with all reasons one by one. As we know, Tantra treatise are written in a symbolic language. And the reason of this, is also obvious. Tantra is a very effective sādhanā system for awakening the hidden powers. To avoid the misuse of it, the techniques are armoured in symbols.

These symbols are written in Sanskrit language. Due to lack of the proper knowledge of Sanskrit language, scholars have merely translated treatise verbatim which has killed the very essence of the Tantra system. Arthur Avalon views the impact of English education as the cause behind this. He has mentioned illustration of how verbal translation harms the very core of the system. As an instance of if he quotes the concept of Bhūtasuddhi which is verbally translated as the removal of demon by English author which is not consistent with the original Tāntric meaning. The real Tāntric meaning of Bhūtasuddhi is purification of five elements namely, earth, water, fire and its derivatives of the body of Sādhaka.³

Here we can see the vital difference between the verbal translation and the real Tāntric meaning. A layman generally due to lack of

knowledge of the Sanskrit language used to read the improper translation done by experts which creates a fallacious notion in their mind. The view of Ganthur also tallies with the view of Arthur Avalon. In his own words, "There is hardly any other kind of literature that has met with so much abuse particularly by those who never read or seriously studied a single line of it, or that has so much fascinated those who on the testimony of misinformed and uninformed people thought the Tantras to be most powerful and hence strictly guarded means for the gratification of purely biological urges. Only very few people tried to form an opinion of Tantras by their own."⁴

Like term "Bhutasuddhi", there are also some other symbols which are also verbally translated. They are namely, linga, yoni, Ardhanarisvara etc., which are translated as phallus, vagina and gross copulation respectively. But in reality, as we have seen in the concept symbolism that these represent only the source of creation.

The symbol of 5 M's is also highly misinterpreted. How they are judged and which is its subtle meaning that we have seen in the Tantra symbolism. From this, we can easily imagine the condition, if the Sādhaka practiced it grossly. And it actually happened by the Buddhist monks. They practiced it grossly in solitude or the summits of mountains. No society can stand this type of situation. And hence it becomes the cause of condemnation. But from this we can't say that Tāntric principles are low and cheap. The only thing is that they are wrongly interpreted.

The Tāntric principles do not lead us to do anti-social activities. The Kulārnava Tantra has strictly condemned the gross practice of 5 M's. As it declares the doer of this undoubtedly goes to hell.⁵ By coining the characteristic of Vāmamārgi the Meru Tantra declares, the real Sādhaka is that who is blind for taking away other's money, impotent to other woman, deaf for abuse, and who has controlled all senses.⁶ These references are enough to allow us to conclude that the real Tantra does not teach us to harm society.

Besides all these things, one solid onslaught has been thrown on Tantra by malicious Sadhaka. There are certain techniques in Tantra Sādhana for curbing the obstructions which come in the path

of Sadhana namely hypnotism, destruction of an enemy etc. But immature Sadhaka uses these techniques for kidnapping a child or a girl, or for rape. So these mal-practices of Sādhakas have also played a prominent role in the degeneration of Tantra.

With all these reasons, the social-religious condition of medieval time is also a remarkable cause of condemnation of Tantra. When Tantra was in full form, some other systems also emerged out which were contrary to Tāntric doctrines. Tantra believes in the gratification of social and family life while the other systems declared strict austerity and renunciation of worldly and family life as a way of salvation. This contrary concepts created a conflict in the layman.

The view of later systems, that of Jainism and Buddhism, renunciation of world, was unnatural to human being. Nature has given some instincts to enjoy and we can't negate them. We can transcend by satisfying them in a natural way and in a creative manner but to suppress them by neglecting them is an unnatural way. Because of this conflict between two streams, people removed their face from the real spirituality. And due to this an unbridgeable abyss has taken place between a house-holder and a Sādhaka.

Tantra shows the solution to come out from this situation, The remarkable difference between these two contrary systems lie in the view of satisfaction of senses and their sublimation by using them under rational control. Instead of suppressing instinct, Tantra tells to transcend it by enjoying it. The suppressed instincts are like a spring which can arise at any time in distorted form The root of the instances of rape, kidnap are the result of immature suppression of sex instincts.

For Tantra, human beings are subject to instinctive demands. So first enjoy the worldly life completely. Gratification of it will remove the worldly bonds as natural as a snake removes its slough. Is it not a healthy view regarding life ?

Ignorance of all these things prove as thorns around the Tantra rose. If we want to have a pleasure of the fragrance of rose we have to concentrate only on rose instead of thorns. The fragrance of Tantra-rose lies in its conscious approach to self-discovery and self-devel-

opment through consciously expanding the scope of body-mind complex.

1. Tantra—a conscious approach:

The previous point reflects the reasons of degeneration of Tantra tradition. We saw in that point that, instead of magic and sorceries, Tantra is a conscious approach to self-discovery. In the success of self-discovery certain obstructions arise which are created from the ignorance of real nature of self and body.

As we know, Tantra is a key to open the hidden treasure of Physical, mental and psychic powers. The distinct feature of this Sādhana is that it starts from the physical sheath (Annamaya kosa), that is, represented largely by body. In Tantra, body though is a subject to decay, is highly esteemed as temple of the deity known as Ātman which is micro-form of Lord Siva or ultimate Reality. It should therefore be consciously kept pure. This is the superiority of Tantra doctrine.

2. Positive view of life:

The approach of Tantra is highly positive. It is the message of Tantra, that nothing is to be neglected; nothing is to be negated. Everything is to be accepted and sublimated. Though our body is fragile, but Tantra says utilize your body-power, make it more and more powerful strengthen it like a rock. Prepare body and mind to the extent that, it can endure any disturbance of outer and inner world. Tantra has not left its reader only by mentioning this. It has also prescribed the Hathayogic asana, Pranayama, sat akarma etc., for it. Everybody can utilize this for healthy body and mind. It is the most applied side of Tantra technique for layman. The only condition laid down by Tantra is that, all these āsana and other techniques should be done under the guidance of an expert otherwise it is likely to do more harm than good. After gaining control over them, one can freely practice them and enjoy the results of them.

The superiority of Tantra also can be seen from its effective results. You can cultivate your power and check its result at any step. If you want to achieve any goal and if there are some obsta-

cles in your way, you can curb these through the technique of concentration like Trātaka. And because of this quick and effective results the Mahānirvāṇa Tantra declares, "Other treatise area of no use while Tantra, Astrology and Medicine give its results constantly".⁷ Thus Tantra removes obstacles related with mind-body but how it removes the ignorance of self ?

Ignorance of the real nature of self is the root of suffering. Self means consciousness. We make a distinction between consciousness and non-consciousness entity or self and not self. But like Tantra seers, scientists also have declared that there is nothing like grossness or not-self. Everything is made out of atoms and that atom is nothing but the dance of energy or consciousness. This dance has been seen by living occidental scientist, Capra. In his well known book 'Tao of Physics' he declares, "I saw cascades of energy coming down from outer space, in which particles were created and destroyed in rhythmic pulses; I saw the atoms of the elements and those of my body participating in the cosmic dance of energy; I felt its rhythm and I heard its sound, and at the moment I know that this was the dance of Shiv, the Lord of Dancers worshipped by the Hindus."⁸

The conclusion to which science has arrived through intellect that same has been realized or visualized by seers as a result of their Sādhana. The synthesis of a seer's and scientist's view has been beautifully made by Dr. Lalan Prasad which we shall quote here.

"What is ultimately Reality ? Is the Reality atoms and molecules, or something else of which these atoms are the different manifestations ? The difference between a spiritualist and an objective thinker is based on the nature of Realty. The objective thinker holds the belief that Reality is crude matter of which mind is a chemical reaction. Due to clash and cohesion in the material structure consciousness has emerged. Hence it is an epiphenomenon. We do agree with the materialist that mind is a by-product of matter how it is possible for this mother-matter to beget the child -mind without the conception of spirit ? We know nothing can come out of nothing. Hence the matter is not devoid of consciousness. Indeed matter is nothing but a crude manifestation of spirit. Einstein made a radical

change in the concept of matter. His $E=mc^2$ made a historical departure from the traditional definition of matter. Matter is not a dead inert substance which occupies some space. It is bottled up energy. To the spiritualist, energy is the crude manifestation of consciousness. Consciousness is the Supreme Reality. All other objects and beings are metamorphosed forms of consciousness. Param Siva is the Supreme Subjectivity. All other subjectivities or objectivities are mere blendings of the supreme consciousness."⁹

3. Realization of Supreme consciousness:

So realization of supreme consciousness is the self-discovery to mankind. But how to realize that ? Tantra says that the source of realization is already within our body but in latent form. It is latent because of our nescience which in Tantra terminology is known as Pasa otherwise, without Pasa, as the Kulârnavâ Tantra declares, 'The individual Self itself is the universal self. Sadâsiva is that who is boundless (Pâsa mukta) while Siva is that who is surrounded by Pâsa.'¹⁰

Pâsa is created due to attachment with world. But how world is created ? In the Tantric form of Laya yoga or in Satcakrabheda, the five gross constitutional elements (pañca Mahâbhûta) of both universe and body dissolve in their source. It means during the process of this yoga, the earth element dissolves into water, water into teja into vâyu and Yâu into âkâsa. And this âkâsa element further dissolves into their essences like sabda, sparsa, rûpa, rasa and gandha which again merge into Buddhi, Ahmakar etc. and ultimately into the spirit or consciousness. Thus the individual consciousness unites with the universal consciousness. A harmony between diversities takes place in the personality of a Saddhaka. Then whatever he thinks, acts or wills is not like ours but whatever he does, it perfectly and totally as if were, through him the ultimate Reality manifests itself.

This seems beyond our capacity to accept this process of evolution. Because as Nargis Dalal declares, "Evolution is simply the capacity to register meanings that are already exist but which are not yet apparent to the unenlightened mind. The higher the form of life, the deeper the capacity to register meaning. Any increase in

subtlety is an inward evolution developed through the examination of meanings and vibrations that so far have been too fine to grasp. The creative person taps the powers of the sub-conscious and, in doing so, he becomes aware of forces that are normally inaccessible to the consciousness.

If large number of intelligent persons were to take to this practices, freed from the aura of mystery and mumbo-jumbo, it may be possible to produce a group of people who would be extraordinary from every point of view; Prodigies of the highest order, with a command over all the major languages and sciences, a new elite from whom would come new forms of education and who would in a sense, keep a watch over the human race."¹¹

This type of evolution, as Sri Auravindo thinks, will take place in a Gnostic Being which has yet to come on human territory. The nature of this Gnostic Being has been described by him in his "Life Divine".¹²

Conclusion:

In this twentieth century when everybody is made after having more and more energy, it is rightly declared Tantra, as the scripture of the Kali age, which is directly related with energy. Of course, its way of achieving energy is very difficult and it requires genuine guru or guide which is rarely available. Due to certain reasons which we have already seen in this chapter, this notion has been surrounded by the cobweb of nescience.

What Tantra is in reality that we have mentioned after the refutation of the objections raised by layman and scholars. Tantra actually is a way of self discovery which starts from the Purification and perfection of body mind complex.

The Hathayoga, which is a part of Tantra, deserves a high attention in this regards. Ha and that literally means sun-moon respectively while yoga means union.

Hence Hathayoga means union between opposite that is Sun-Moon. It is more a harmony than a mere union between two opposite.

We live in a world of dualities like heat-cold, day-night, male-female, mental-vital, intellect-emotion etc. For integrated personality the harmony between these two opposite is required. In subtle body these opposites are *Idā* and *Pīṅgalā* which on physical level work as sympathetic and para sympathetic nervous channels. Harmony between these two also leads to the harmony between metabolic and ketabolic function, which is ascribed to these channels of body. This makes body healthy and free from diseases.

The practice of the Hathayoga ensures the cultivation of mental powers like telepathy, omnipotency, omnipresence etc. but this is not the aim of a real *Sādhaka*. These are the side-efforts of his *Sādhana*. A genuine *Sādhaka* uses these powers for the welfare of society. Jesus is the example of it. He has healed many patients by mere touch of his hands. There are also some saints and seers who have devoted their powers and life for the humanity. All these living examples lead us to believe in the decendence of divinity towards humanity. The Gnostic Being of Sri Auravindo is also among them. The whole humanity is waiting for the incarnation of that divinity.

Chapter-7

Human Anatomy and Tantra

Chapter-7

Introduction:

Physical body is the main gate for approaching the soul. In the body, Lord who controls the entire universe also is present. Lord in a form of power lies dormant in body. In a course of time, through constant efforts and though yogic practices, man unfolds his latent powers. The physical body is the reservoir of energy and the only means for the unfoldment of which is the goal of the sâdhaka. And because of this, body is not given for the unholy purpose or only for the enjoyment of sensual pleasures. The prime purpose is to attain liberation from limitations of body and mind, and attainment of spirituality through body.

Physical frame, in the Tantra system, is highly esteemed as the temple of Spirit or God (Dehao devalayo devi). And hence, it should be kept pure and perfect in condition. The process of Tantra sâdhanâ starts from gross and ends into subtle. And hence it has accepted physical body positively. Miercea Eliade with the reference of the Gheranda Samhita declares that, "The body is no longer the source of pain, but the most reliable and effective instrument at man's disposal for 'conquering death'. And since liberation can be gained even in this life, the body must be preserved as long as possible and in perfect condition, precisely as an aid on meditation."¹

The Rasârnavam, the another Tântic treatise also supports the positivity of the body. As it views, it is of no use if liberation is gained after death. Even donkey can also get it. So in order to attain liberation in this life, the preservation of body is very essential.²

For Tantra, the preservation of body can be prolonged according to the will power or desire through the Hathayogic âsanâsa, pranâyâma, Tântic techniques and also by the intakes of mer-

cury preparations.

Physical diseases and mental ailments are hurdles in the way of longevity. There are various ways and means through which one can overcome these hurdles. They are known as various therapies. Healthy body-mind complex is the goal of all therapies. Any therapy, is first applied on the physical body and it ultimately affects the mind. So different therapies have worked out the anatomy. At present Allopathy, Ayurveda, Homeopathy etc., are the leading ones. Tantra also has beinf a thereapy its own view regarding anatomy. It is really a very surprising to note that the anatomy which is worked out, in the twentieth century with the help of the scientific instruments, largely tallies with the Tantra anatomy which is revealed out in hoary past.

In this chapter an attempt has been made to present the anatomy given by Tantra and Allopathy. The concluding portion covers the synthesis of the both. We shall, first, briefly survey the anatomy of Allopathy.

A. Anatomy given by the Allopathy System:

The literature of the anatomy given by the Allopathy system is very large, hence, it is difficult to present it here in detail. This system has accepted nine main system for the sustenance of body which are namely, (1) Bones, (2) Muscles, (3) Digestion, (4) Circulation, (5) Respiration, (6) Excretion, (7) Nervous, (8) Glands and (9) Reproduction.

All these system have significant place in the maintenance of the body but here we shall mention only the nervous system and the gland system as they are directly related with the Tantra anatomy.

1. The Nervous System:

The nervous system is connected with all bodily systems because it controls all activities which are going on in the body.

The nervous system consists of two divisions. (1) Central system and (2) Autonomus system The central nervous system mainly consists of the brain, twelve pairs of cardinal nerves. spinal cord ad forty-three pairs of the spinal nerves. The autono-

mous nervous system consists of spinal cord, sympathetic nervous system and the para-sympathetic nervous system.

The spinal cord which is elongated in the shape, is a prolongation of brain, and, is located in the hollow of the spinal column. Spinal nerves start from the spinal cord and issue out from the spinal column. All these forty-three pairs of nerves spread out themselves throughout the body and form a closely woven network.

Functionally, nerves may be divided into two groups. Motor and Sensory or efferent and afferent respectively. All muscular activities are responsible for motor nerves while the feeling of smell, taste, touch etc., are responsible for sensory nerves.

The autonomous nervous system consists of two rows of ganglia that is group of nerve cells. These two rows of nerves are mutually connected and cross each other at certain points along the spinal cord. These cords on each side of the spinal column are known as sympathetic nervous system and the para sympathetic nervous system.

Life process which is going on in our body, without the interference of our will, is under the control of these systems. They work independently, hence, they are known as autonomous system. The effort of Hathayogi and Tantric sādha is to make this autonomous system under his will and that way he controls the bodily activities.

2. Gland System:

In body there are certain organs which themselves secrete fluid with their special properties, which help in the action and growth of the body, known as glands. The secretion of glands is known as hormone on which physical-mental growth depends. Long before the Allopathy system has found out the glands, the Hathayoga has advocated exercises for the proper secretion which ultimately result into the growth of body-mind complex.

These glands are known as the ductless glands because they pass their secretions directly into blood and lymph etc. These glands are namely, Pituitary, Pineal, Thyroid, thymus, Pancreas, Adrena

TANTRA SADHANA (IV)

The Woman to be waited Waited is the Shakti that is dormant in the animal man but awake in the votary of the Path.

The rush of bliss that ensues upon the meeting of the Pair, the Supreme Shakti and the Self above, is the real Congress; all else is mere copulation.

(5.111-12)

THERE is a divine Power latent in man waiting to be awakened into action. All the powers that are normally active and make life possible are only derivations, diminutions, secondary formulations of this Mother-Power that is dormant within. This puissance, the Shakti, is to be awakened, aroused into an upward movement towards the Self, the Pure Consciousness situated at the highest centre of the being of man. And when this union between the Shakti darting from its seat below in the lotus of the Muladhara and the Lord waiting above in the lotus of infinite petals, the Sahasrara, is effected in the consciousness of the practitioner there is an ebullition of intense Ananda.

That is the true Congress, the real bliss that is aimed at, not the physical interchange at the animal level.

UPASANA

Without upāsana the Presence does not fructify.

(6.79)

THE Divine is indeed present everywhere, especially in the human body. But that by itself does not make any difference to man unless he takes steps to realise it in his consciousness. Self-awareness, self-purification, adoration and evocation of the indwelling Divine are the main steps for awakening this Presence in his consciousness and making it a dynamic power in life. Such an inner discipline is indispensable to prepare and raise the human system to the level of that purity and intensity in seeking which alone can move the Divine to reveal and manifest itself in the person of the seeker. Otherwise the potentiality remains untapped and dormant.

is Swa and adhithana. Swa means prana while adhithana means resting place.⁵ Hence Swadhithana means the resting place of prana. This centre is situated at the root of the genital organ.⁶ The bija mantra Vam of the water element is predominant here. This six petalled lotus contains the letter from Bam to Lam. The vehicle of this centre is Maker or crocodile. The aspirant who meditates on this centre becomes free immediately, from all his enemies.

3. Manipura cakra:

This centre is located above the Swadhithana cakra and anatomically at the root of the navel region.⁷ The bija mantra Ram of the fire element is predominant here. It has ten petals on which the letters from Dam to Pham are located. Meditation on this centre makes one free from the fear of fire. Even if he throws himself into fire, he remains alive.

4. Anāhata cakra:

This centre is believed to be situated in the region of heart. The seed letter yam of the element air is predominant here. The vehicle of this centre is antelope. The nature of both antelope and the air is the same, i.e. the fleeting nature. A sadhaka who meditates on this centre controls vayu and is full of capacity either to create or to destroy the world.⁸ This claim though seems to be exaggerated, it shows to what an extent the meditator can develop himself. The simily given shows to what an extent the meditator can develop himself. The simily given shows that he virtually becomes as powerful as Lord himself.

5. Visuddha cakra:

This centre is located in the region of throat. All sixteen vowels are located on this sixteen petalled lotus. Visuddha means pure. Concentration on this centre makes the mind of a sadhaka pure from all impurities. The bija mantra Ham of the ether element is predominant here. Meditation on this centre gives the knowledge of three worlds. It also makes free from diseases and sorrows.⁹

6. *Ājñā cakra:*

This centre is located in the body at the space between the two eyebrows. The bija mantra Aum is located here. This centre is a seat of mind. The mind of a sadhaka receives the commands (Ājñā) of guru through the concentration on this centre. Concentration on it also destroys the past deeds of sadhaka and he becomes jivanamukta. It is equated as a third eye of Siva which destroys ignorance as well as desires.

7. *Sahasrāra cakra:*

The Sahasrāra cakra is located at the top of the head. This centre contains sand and petals (Sahasra means thousand). It is the place where the union of Siva-Sakti takes place. Here we should note that, this centre is very subtle in nature and because of this, it is not considered as belong to the plan of body. Because of its subtlety, it is not counted in the six centres.

Nādi: Theory of Channels:

In Tantra, nādi does not mean gross channels but it contains subtle energy or prana. These channels are spread throughout the body and hence they are many in number. Because of this, they cannot be counted. Though, however, some figures have been proposed. According to some treatise the figure is 3,00,000 for others, it is 2,00,000. But the figure 72,000 is largely accepted.

Among all these nādis, ten are important namely, Idā, Pingalā, Susumnā, Gandhārī, Hastajihvā, Pusā, Yasasvini, Ālambusā, Kūhū and Samkhini. The first three, among these are more significant.

Idā and Pingalā are located at the end of the spine. They extend from the end of spine to nostrils. They are considered as the container of the lunar and solar or mental and the vital currents in the body respectively. The Susumnā nādi is said to be generally closed at the base of the spine and can be opened by certain yogic practices.

Prāna or life force flows either through Idā or through Pingalā generally. The Tantra sādḥaka arrests this way of flowing of prāna and he tries for drawing prana through the Susumnā nādi.

Conclusion:

All therapies revolve round the concept of the physical body. According to Tantra, all organs of the body are connected with cakras or centres through subtle channels or nādis. The power which is required by the limbs of body is provided by the centres of consciousness through nādis. This concept has a great resemblance with the Allopathic concept of glands and the nervous system. We have seen in the anatomy of Allopathy that the growth of body and efficiency of nervous system depends upon proper or balanced secretion of glands.

According to the Tantra, the Mūlādhāra cakra is situated at the base of the spine of which prithvi or earth element is predominant, the supporter of all things. The Āyurveda sūtrāni also declares, the Mūlādhāra cakra is a supporter of all bodily substance, sapta dhātus.¹⁰

To show the predominance of earth element, Tantra declares this centre as the seat of prithvi tattva or earth element. Physiologically, this centre situated at the anus region and is also associated with the area of excretion of solid matter from body.

The Swādhīsthāna cakra is located at the root of the genital organ of which water element is predominant. In body, all output of fluids, i.e. urination and discharges of semen takes place here.

The Manipūra cakra is believed to be situated at the navel region which is associated with the fire element. Physiologically when the inner flame of fire (Jatharāgni) is properly regulated, it results into health. Otherwise it can be the source of diseases.

The Anāhata cakra is located at the heart region. This is the centre where the air element is predominant. It is a centre of nutrition. Heart distributes purified blood sent to it by lungs to various parts of the body. The efficiency of lungs is very much needed for the purification of blood. This efficiency of lungs can be increased by prāṇāyāma which is highly related with the air element.

The Visuddha cakra is located in the area of throat. The element ether is predominant here. All vowels are located on this

center. Physiologically this centre is considered as the centre of vocalization.

The *Ājñā cakra* is located between the two eyebrows. It is also known as the third eye. It is the palace of the Pineal gland. This centre controls our desires as well as gives us knowledge. The Pineal gland does this same work according to Allopathy.

The *Sahasrāra cakra* is located at the top of the skull, where the consciousness is evolved at the highest degrees. Physiologically, it is a place of the *Pituitary* gland.

According to the Allopathy, the Pituitary gland is located in between two brains and is known as master gland. Because it controls the function of all other glands. The secretion which it released are important from the point of view of maintenance and destruction of the body. It is a seat of the desire of reproduction also. Hence Tantra has aptly described it as *kameswara*.

The Tantric centres and *nādis* are very subtle in nature. So it is not proper to identify them with the gross physical system. Here we have mentioned it just to show the resemblance between the two system namely Allopathy and Tantra.

The anatomy which is mentioned by Tantra is very subtle in nature and can be seen only through the yogic vision, and not by the dissection of the body.

Chapter-8

Healing Aspect of Yantra and Mantra

Chapter-8

Introduction:

On this earth among all existing species, human race is the only one which has become victim of the self created disease. Many therapies have been worked out to come over this calamity but still, we are not in a position to remove all diseases. On the contrary, sometimes, the side effects, of drugs appear in a form of new diseases.

The basic reason of the frequent appearance of disease lies in our artificial or unnatural way of living. We do everything to go against nature, e.g. our habit of eating. We must eat whenever we feel the need for it or hunger for it and eat only those thing which we know are conducive to good health. Instead we either eat more out of fashion or eat those things which we know are not conducive to health. This improper way of eating, creates complexities in stomach which result into various diseases. Not only in eating, in our routine life we do many more things which we know, may result into some sort of irregularities either physical or mental.

Besides this, there is also one vital reason which is responsible to create physical-mental and also spiritual disorders, that is, the neglect of the inner healing power or the power of resistance of body against diseases give by nature. Modern life is full of stresses and strains. We are always in hurry and hence we are constantly in search of instant cure and due to this we take such drugs which they cure the disease instantly but ultimately harm the body.

There are many side effects of such drugs, like insomnia, blood pressure, disturbance of sugar balance etc. And therefore, the experts in this field are in search of those drugs which are harmless or in search of drugless therapy.

Yantra and Mantra are techniques designed for cultivating in-

ner latent power of resistance of body-mind with which we are not aware of out of ignorance. We, therefore, wonder when experts in this field talk in terms of superhuman powers. Superior power invoke wonders because we are ignorant of them.

Yantra and Mantra techniques worked out for cultivating latent power of body-mind which are based upon highly ascertainable psychological and spiritual facts. Yantras are formed out of certain geometrical figures like dot, triangle etc. They serve as means of concentration. It is recognized by Tāntrics that concentration of mind is multiplication of mental faculty and addition of mental powers while dissipation of Paycho-physical energy is waste of energy and consequently an invitation to diseases. This process of concentration if perfected, may lead to not only drugless therapy but also increases longevity.

Tāntric of ages have perfected the techniques for concentration. Mantra is again a very powerful weapon in the armoury of Tantra for bringing about highest form of concentration by which the expert simply by concentration of his cultivated powers, can bring about wonderful results with the help of repetition of certain syllables known as seed letters or Bija Mantra. Now let us see the details of Yantra and Mantra with the reference of their therapeutic value.

A. Yantra Therapy :

Introduction :

One of the theories regarding the creation of world is that, world is nothing but the mere projection of mind . Mind perceives world objects with the help of the data given by the sense organs. So the expansion of vision of mind depends upon the amount of data given by sense organs. For instance, if the sense of hearing, is cultivated more, then the owner of it, can hear more loudly, than another man. Same is the case with all sense. A yogi or a sādḥaka, who has expanded the inner latent ability of sense organs can open the subtle apparatus for the knowledge of the world which is not possible in case of a layman.

Tantra shows us the way of the process of expansion, of the power of senses. One of the meaning of Tantra is expansion (Otan = to expand). Tantric techniques are designed for this purpose. If, suppose the powers are aroused by the application of Tantra techniques then what's the use of it, if they are not channelized. Uncontrolled power harms the sâdhaka himself. Considering this, Tantra has devised the unique method of Yantra. The term 'Yantra' comes from the root 'yam' which means to control. Yantra is an aid for controlling the power.

Yantra is also representation of the Higher Reality. It represents the Reality in geometrical forms like dot, line, triangle etc. These are not merely geometrical signs. They are also Yantric symbols which represent subtle meanings of the Higher Reality.

Sri Yantra, among all the Yantras, is the most auspicious. It represents devi or sakti. The formation of the Sri Yantra is unique. Five triangles with downward apex are superimposed by four triangles with downward base. This combination results into forty-three triangles. The outer appearance of these triangles can be classed into seven circles which are considered as the centres of consciousness.

Tantra techniques are based upon sound principles. (1) Unity of microcosm and macrocosm and (2) Identity of two in an individual. Yantra is a means through which this identity can be realized by the individual. Sri Yantra is a symbolic representation of these two principles and hence it represents the human-body-mind complex with self or consciousness as the presiding deity and therefore it functions as a link between these two. It is used as a means for contemplation. Contemplation on it, results into the identification of microcosm and macrocosm. Moreover, concentration on Sri Yantra also gives beneficial rewards to sâdhaka.

One of the cakras of Sri Yantra, is Sarvarogahara cakra, remover of all diseases. The concentration on this centre insures the sâdhaka freedom from all diseases. We, therefore, say that Sri Yantra technique has tremendous therapeutic value in insuring himself from all diseases. Like Sri Yantra, there are also other Yantras which are believed to be the means for curing and pro-

protecting the sādḥaka from the attacks of physical and mental diseases. In this chapter we shall make reference to two Tāntric treatises namely, the Saundrya Laharī and the Kalpacintamaniḥ for supporting the view.

For the convenience of presenting the details, this chapter has been divided into two groups, A and B. A consists of the details regarding Yantra and its symbolic representation while B contains its therapeutic value. Now let us be acquainted with the meaning and significance of Yantra the first.

A) 1. Yantra and its symbolic meaning:

In scriptures, which deal with the sādhanā aspect, the Ultimate Reality is termed as deity (Div=shine) because it is viewed as light. In Tantra, this great effulgence of light is considered as Lord Siva.¹

According to the science, which deals with the analysis of the rays of the sun, the objects of world are nothing but the various combinations of the rays of light. These rays are seven in number. So by making change into the combinations of rays, any object can be transformed into any other object. Swami Yogananda has mentioned this type of illustration in his, 'autobiography of a yogi' in which his guru had transformed camphor into graphite.

Sun light as the great radiance is formless. When it manifests, it takes form. Yantra represents the Higher Reality and hence whatever is manifested by the Higher Reality, the worldly objects, are Yantras. This view is also expressed by Devarāja Vidyā Vācaspati. As he declares, "there are, in the world, innumerable Yantras. Every shape, every leaf, every flower is a Yantra, which through its shape, its colour, its perfume tells us the story of creation."²

Yantra represents Light or the Higher Reality in the form of geometrical figures. Due to this presentation of light, Yantra is considered as the abiding place of deity.³ The Higher Reality is figured out in symbols or forms because a layman is not in a position to grasp the formless great radiance, so at initial level, to have a glimpse of the Higher Reality, Yantra is required. As the Yoginī Tantra declares, "The goddess is to be worshipped in the

sex emblem, a book, a symbolic drawing on the ground, an image, water or a stone.”

This leads us to confer that Yantra is a store house of energy or a symbolic representation of the cosmic energy underlying all objects of the universe. Moreover, it is, as Zimmer views, is also an instrument. He gives this view by breaking the term ‘Yantra’. The term ‘Yantra’ is a combination of Yam+tra. Yam means to control while tra indicates instrument. In his own words, “Yantra is an instrument designed to curb the psychic forces by concentrating them on a pattern, and in such a way that this pattern becomes reproduced by the worshipper’s visualizing power. It is a machine to stimulate inner visualization, meditation and experiences.”⁵

Yantra is formed out by the figures like dot, circle, line, triangle etc. They also contain the subtle meaning underlying the Higher Reality. Now let us proceed with the Symbolic meaning of the various figures.

Symbolic meaning of Yantra:

In the Veda, there is a beautiful story regarding the omnipresence of Lord. As it says, having created universe, God stood out of the universe and thought about how to penetrate or enter into the universe. Then he decided to enter into the universe through name and form. So wherever there is a name and form (Nāma-Rūpa), the Higher Reality pervades in it.⁶ In Yantra, these forms of the Higher Reality are reflected in such a manner that. Through contemplation on them, sadhaka can feel the presence of the Higher Reality.

Both the constituents of the Higher Reality, the macrocosm and the microcosm, are the same and they are represented by five gross elements (Pañca mahābhūta). In Yantra, these forces are symbolized in a figurative manner. So by concentration on it, one can establish harmony between the microcosm and macrocosm.

The geometrical figures, from which Yantra is composed are dot, triangle, circle, square etc. Now we shall see the subtle meanings

of them.

a. Dot: Bindu:

Bindu is represented by dot. As the whole of Geometry is an expansion of dot, so also the entire Yantra is an expansion of Bindu. Yantras or geometrical figures are drawn on soil or on Bhūrajaptra or the bark of trees meant for them or on leaves or on copper, silver or gold plates. Various movements going on in cosmos are the creation of various forces working in the cosmos. These forces or movements are symbolically represented on the Yantra.

The cosmic forces are all pervasive and hence represented on Yantra are believed to be all pervasive, e.g. Ether which is all pervasive is represented in the form of Bindu. In Tantra, this dot or Bindu is considered as Siva which symbolically represents the source of creation.

Not only Tāntric seers, but the western psychologist like Jung has also contemplated on this aspect. He has utilized the word 'Mandala' for cakra and coined the word centre of Mandala as Siva. In his own word creating in emanation. Siva according to the Tāntric tradition is one existence, the Timeless in its perfect state. Creation begins when this unextended point known as Siva Bindu appears in the eternal embrace of its feminine side, the Sakti.⁷

The expansion of Bindu takes the form of triangle, trikona which according to the Yantra symbolism represents Sakti. Bindu is Siva and trikona is Sakti. In Tantra, both these are considered as identical.⁸

b. Triangle : Trikona :

Triangle is an emblem of Sakti and Sakti is, according to the Sanskrit lexicon, considered as of a feminine gender, hence it is also known as yoni or the female reproductive Rogan because the whole cosmos has come out of it. The Rgveda also refers the origin of cosmos as yoni.* There

are two types of triangles figured out in Yantra. One is with upward base while the other is of downward base.

The triangle with apex upward shows the way of sublimation. Among the five elements, it represents the fiery element or Agnitattva. As fire goes upward, the aspiration of sàdhaka also goes upward. This triangle is also known as Siva kona.

C. Sakti kona.

The triangle with apex downward represents the water element or Àpa tattva. The tendency of water is to go downward which philosophically represents the tendency towards gross manifestation. This type of triangle is known as Sakti kona.

From the combination of these two triangles arises a figure of Satkona or the star with six angles. This figure symbolically represents the union of purusa-prakriti or Siva-Sakti, without which the creation can not take place. So Satkona is a symbolic representation of the creation of universe.

Now let us see how the destruction aspect is symbolized.

This figure like drum of Siva (Damaru) reflects the separation of the union which means the end of creation or destruction or periodic dissolution of cosmos.

d. Circle:

Triangle expands in the form of circle. Circle represents rotation. It also symbolically presents the air element

e. Square : Bhūpura :

or *vayu tattva*. Moreover, it is also an emblem of perfection.

e. Square : Bhūpura :

Generally, square is drawn at the outer most limit of the Yantra. It symbolically represents the grossness, which is the quality of the Earth element or the *prithvitattva*. This figure

in Yantra is known as *Bhūpura*.

Every Yantra starts from Bindu or dot and ends into square or *Bhūpura*. This shows the process of evolution from subtle to gross, or from ether to earth. Heinrich, Zimmer has very beautifully reflected this view, "On one hand the dynamic diagrams suggests a continuous process of expansion from the centre of the pattern to the circumference and requiring a passage for time for its course. On the other hand they are to be grasped as an enduring hierarchy as gradation of simultaneously manifested degrees of being with the highest value situated at the centre."¹⁰ Danielou, Alain has summarized these figures as a representation of the divinities. We close this point with his view. As he declares, "All the elementary geometrical figures point, straight line, cross, circle, triangle etc. have a symbolical value corresponding to basic notions. They can be combined in more or less complex figures to become the representation of particular force or qualities embodied in some aspect of creation. There is no shape, no movement which may not be reduced to a combination of these elemental forms. The magic diagrams constructed with their help truly analyze and represent the creative force of the cosmos which we call divinities."¹¹

There are many types of Yantras meant for securing one or the other objectives like liberation, perfect health, wealth, power, prestige, to overcome diseases, to secure long life etc. The powers cultivated thus are very often used for negative purposes due to human weakness or frailties. They are known as subjugation, attraction, immobilization, dissention, liquidation, eradication and

pacification.*

Among Yantras, meant for cultivating highest powers of body-mind for positive purposes beneficial to one's own self as well as for others including animals and subhuman species, Sri Yantra occupies the central place. It is known as king of all Yantras (Yantra Rāja Yantra) because any of the above powers can be cultivated by concentrating on one or more triangle etc. Because of this greatness of the Sri Yantra, we shall see about it in detail.

2. The meaning of Sri Yantra:

Etymologically, Sri is prefix which denotes auspiciousness. Sri Yantra is devised for many purposes shown above and hence its construction is very complex. We shall deal with that aspect in detail later on. For the time being, we should note that the ultimate object of sādha is liberation. Liberation from the bonds of physico-mental as well as spiritual ailments. Concentration on some specific angle or triangle yield freedom from diseases. But man is not satisfied with health only. There are other goals which in other walks of life. Sri Yantra is designed in such a manner that it may be used by a person desirous of anything in the world including freedom from diseases, enemies etc.

This Sri Yantra is considered as the abode of Lalita, the Tāntric name of the Higher Reality, therefore, it is considered very potent and celebrated among the Yantras.

The emergence of the Sri Yantra is very fascinating. There are various stories regarding its emergence. It is said that the Supreme Sakti of Her own will takes the form of universe and looks at Her own throb with the result that Sri Yantra comes into existence.¹²

This Yantra is also known as Viyāt cakṛa.¹³ Viyāt means space (Akāśa). There are two kinds of Ākāśas. The outer space (Bāhyākāśa) and the inner space (Daharākāśa).

The outer space is spread over the entire cosmos. And the same again is encapsulated into human body known as inner space or Daharākāśa. Daharākāśa, therefore is the same akāśa spread over outside.

The Higher Reality in its evolving process, according to Indian ontology, first manifests in the form of Ākāśa. Ākāśa, therefore, is a visible form of the Higher Reality, as otherwise, Higher Reality being formless is not accessible. Tantra concentrates on the visible manifested form of Higher Reality.

As outer and inner space is identical, sādḥaka by concentrating on inner space, seeks his identity with the Higher Reality. The inner space is the real space for sādḥaka because the Higher Reality resides in the form of space in inner space. Sri Yantra is again a symbol of Daharākāśa or Higher Reality within.

It is the significant aspect of Sri Yantra that its formation reflects both microcosm and macrocosm. Meditation on it results into realization of the identity between these two.

a. Formlation of Sri Yantra:

Sri Yantra is drawn around a Bindu or dot which is considered as the abode of Lalitā, the universal energy. It is described as consisting of super imposition of nine triangles, four with upward apex and five with downward apex. The combination of both produce forty-three triangles. Around these triangles, there are two circles one within the second which contains eight petals while the outer contains sixteen petals. Outside these petals there are three circles and these three circles are covered by the squares known as Bhūpuras. This is the geometrical formation representation of Sri Yantra. Now let us see what it represents symbolically.

b. Symbolic representation of Sri Yantra:

Sri Yantra starts from Bindu and ends into Bhūpura. It means, in terms of elemental forces, it covers everthing from ether to earth. This shows the way of creation. Between Bindu and Bhūpura, the whole yantra space is divided into three fold and nine fold division as shown below:

The centre of the triangle is known as abode of Lalitā. The apex is known as the residence place of Kāmesvari while the left and the right angle are considered as the abiding place of Vajresvari

and Bhagamàlini respectively. Symbolically, these three deities represent Moon, Fire and Sun respectively. Again, it is also a representation of creation, maintenance and destruction.

Nine fold division:

The same three fold division from the point of view of gun as becomes nine fold.

The Sakti or nature in its subtle form is composed of three

gunàs, Sattva, Rajas and Tamas. These three gunàs in their active form are convertible to each other. Therefore, the whole division becomes nine fold. Here in the case of gunàs, it is Sattva of Sattva, Sattva of Rajas and Sattva of Tamas. Same is the case with Rajas and Tamas. Thus nine fold division take place.

Between Bindu and Bhùpura, figures like dot, circle, triangle, square take place. They also contain symbolic meaning. Bindu or dot is the centre where creator and creation are in direct contact or identical. Circle represents perfection while square presents grossness. Triangle is an emblem of yoni, a female generative organ or a source of creation.

The Tripuratāpini upanisad has considered triangle as Tripura. Tri means three while pura means abiding place. It is an abiding place of three worlds, namely, earth, heaven and nether world.¹⁴ According to the Tripuropanisad.

Triangle represent gross, subtle and causal aspects both in individual and in cosmic form.¹⁵

After having seen about the symbolic meanings of the geometrical figure of Sri Yantra, now let us see Sri yantra as symbolic representation of human body.

C. Sri Yantra as symbolic presentation of human body:

Tantra considers body as a temple of divinity. All limbs of body belong to the universal power. These powers representing the limbs of body can be located in Sri Yantra. So Sri Yantra represents the union of body and universe in identity. The significant point is that mere knowledge about this does not help sādha without identifying himself with it by Bhāvanā or imagination. How this identity takes place that we shall see in the words of S. Shankaranarayanan, "The method of arriving at the identity is by offering these members of the human body to the Saktis to whom they originally belonged to the universal powers located in the Sri Cakra. This has to be achieved by Bhavana deep meditation contemplating step by step the various psychophysical parts in the human body and the corresponding powers in the Sri Cakra and dwelling on their identity."¹⁶

Now we shall see with the help of the figures how physical body is represented in Sri Yantra from Bindu to Bhupura.

Physical body as represented in Sri Cakra:

As we have seen Sri Cakra represents both macrocosm and microcosm. That way it is a link or medium through which one can realize the identity between the Ultimate Reality and the Self. In the process of identification, according to Tantra, sadhaka has to mentally imagine (Bhāvayet) the identification of human body, with the universal powers from which the body is composed, and which are imaginably represented by various angles, triangles etc. of Sri Yantra. The Bhav-anopanisad a Śākta upanisad—has mentioned how the different figures of Sri Cakra represents human body. Thus we shall see the sybmolic representation of the human body in Sri Cakra with the help of Bhāvanopanisad.

The outer most cakra, which is known as Bhūpura contains three lines. The first line as it is mentioned in the chart 2 represents eight powers namely, minuteness, lightness, greatness, lordship, control, power to have whatever one wants, enjoyment, desire, attainment and accomplishment of all desires.¹⁷ The second line of the Bhūpura represents lust, anger, covetousness, delusion, pride, envy, merit and demerit.¹⁸ In the third line of Bhupura, the six centres of the body, the two Sahasrāra one above and the other below and Indra yoni are the nine Saktis situated.¹⁹

The sixteen petalled lotus represents the five gros elements namely, earth, water, fire, air, ether, ten senses, namely, ear, skin, eye, tongue, nose, mouth, foot hand arms, genital and the mind.²⁰

The eight petalled lotus is an emblem of faculties of speaking, taking, going, excreting, enjoying, rejecting, accepting and ignoring.²¹

The fourteen cornered figure represents fourteen nadis namely, Alambusa, Kuhuh, visvodari, Vārūni, Hastajihvā, Yasovati, Payasvini, Gandhāri, Pushā, Sankhini, Saraswati, Idā, Pingalā, Susumna.²²

The ten cornered figure is a representation of ten vayus, five main and five auxiliary of body namely, Prāna, Apāna, Vyāna,

Udāna, Samāna, Nāga, Kurma, Krkara, Devadatta, Dhanañjaya.²³

The ten breaths acting on the digestive fire of the stomach jatharāgni become tenfold and digest food of all kinds are represented in the ten cornered figure.²⁴

The eight cornered figure represents cold, heat, pleasure, pain, wish, sattva, rajas and tamas.²⁵

Avyakta, the unmanifest, Mahat the vast cosmic principle force and Ahamkāra the divisional principle of Ego-formation are the three deities in the primary triangle, kāmeswari, Vajreswari and Bhagamalini.²⁶

The centre of the Yantra represents the supreme deity Lalita the absolute Reality comprised of Existence-Consciousness Bliss.²⁷

Thus Sri Yantra exhausts almost all that the Reality contains and hence is the most perfect symbolic representation of Ultimate Reality. It is therefore used in all auspicious ceremonies of Hindu rites. It is also used for protecting the sādha from all evils. Not only this, with the help of Sri Yantra sādha can obtain or master powers of healing, curing diseases and also for driving away evil spirits. Thus it is of tremendous therapeutic value. Wherever such siddha Yantra is kept the house or the place is secured against all evil forces.

3. Therapeutic aspect of Yantra:

Tantra means liberation. It's a process which liberates the sādha from physical-mental and spiritual ailments. Yantra is an aid in Tantra, which enhances this process of liberation.

As Yantra represents human body, the bodily centres or cakras can also be located in Yantras, especially in Sri Yantra. One of the cakras, in sri Yantra, is known as Sarvarogahara cakra or remover of all diseases. Concentration on this centre makes body devoid of diseases. Their therapeutic value has been already mentioned in the Kundalini chapter.

Besides this, the Tāntric treatise like Saundhya Lahari, Kalapacintāmanih also refer some Yantras for removing diseases like fever, diabetes, rheumatism etc.*

The Yantras meant for various purposes do not themselves become efficacious. Their efficacy depends upon the effort put in by sādhaṅka. Yantra is to be worshipped according to certain procedure laid down in the texts like Kalpacintāmaṇi, Mantra Mahodadhī etc. The entire process is very elaborate and demands astute discipline, concentration as well as observance of certain vows like celibacy, truth speaking, non-violence, non-attachments etc. Sādhaṅka is required to practice all these relentlessly with single minded devotion and unflinching effort. He has to practice fearlessness for sometimes he comes across such experiences which are very much bewildering. It is therefore advised that he should pursue his goals under the guidance of an expert.

The Yantra or Mantra becomes siddha at the end of this elaborate process sometimes lasting for years together but at the end of which the sādhaṅka becomes possessed of supernormal powers which help him in helping others for overcoming the ills both physical and psychical as well as spiritual.

In Aserian civilization the entire population practiced drugless therapy for more than 5,000 years. In our country also, there are people existant who claim to cure various diseases with the help of Mantra and Yantra. It is now time we must undertake to examine the possibility to overcome disease by drugless therapies because practice of drugs is getting day-by-day not only irrelevant but also dangerous.

Conclusion:

The term 'Yantra' indicates two meanings. One is to control while the second is an instrument. Hence, Yantra is an instrument for gaining control over mental modifications which are considered as the cause of psychico mental and spiritual ailments.

In yogic and tāntric treatise, the cause of diseases is considered as due to disturbance of the elemental forces in outside world on one hand and, or, in the constituents of body on other hand. The geometrical figures, out of which the Yantra is formed namely, dot, circle, square etc. are symbolic representation of the elemental

forces. It is believed that medication with Mantra on certain figures of Yantra give health. And because of this one of the cakras of the Sri Yantra is known as Sarvarogahara cakra, remover of all diseases.

Among all Yantras, an emphasis has been laid down on Sri Yantra. As the term Sri indicates, it means auspiciousness. Healthy body-mind is also among them.

Being a symbolic representation of the elemental forces, Sri Yantra also represents both macrocosm and microcosm. So it proves as a link and also as an instrument for realizing the identity between microcosm and macrocosm.

The process of concentration on the Yantra also cultivates the inner latent powers. Power of resistance against disease is also one of them. That way it works as a protection against disease. This process of concentration also prevents diseases by controlling the mental modifications.

The tremendous powers of mind are being wasted in the form of mental modifications. Concentration on Yantra channelize these powers. These channelized powers can be used positively as auto-suggestion in the field of therapy. The disease like insomnia, schizophrenia and other psycho-somatic diseases can be cured by the auto-suggestion therapy.

We have also made reference to Yantras from the Tàntic treatise like Saundhya Lahari and Kalpacintàmanih. The significant aspect, which should not be over looked here. Is that mere Yantra or figure does not give desired results. The latent power of it should be awakened or charged. Especially, in the case of healing, the efficiency of Yantra, depends upon the charging of Yantra done by healer. Though it is a difficult process but at the same time devoid of any drastic side effects which is very valuable from the therapeutic aspect of Yantra.

Appendix:

1. Yantra from Saundhya Lahari:

The Yantras, which are used for therapy purpose, given be-

low are taken from the Saundrya Lahari of Sri Samkarācarya.

In the notes under appendix of the Saundrya Lahari, it is written like this: "No originality is claimed for the facts published in this prayoga section. The prayoga should be handled only by those who possess the deserving qualifications and after getting instructions from preceptors or Sri Vidyā upasaka."

Prayoga 12

Yantra on water or honey placed in silver vessel. Recital 1,000 times for 45 (48) days, facing North-East.

Arcana : Sarasvati, astotara with white flowers and Lalita asototara with jasmine flowers.

Offerings : Cooked rice, pomograntes, honey.

Effects : dumbness cured, power of eloquent speech, gift of poesy.

Prayoga 52

Yantra or goldplate or holy ashes. Recital 10001 times (1000). For 45 days. Facing North-East Archana. Rudrathrisathi with bilva on right side of Yantra and Lalitha-thrisathi with red flowers on left side.

Offering : Cooked rice mixed with sesamum powder, milk-gruel, coco-

nuts and plantains.

Effects : All ear and eye disease cured.

Prayoga 89

Yantra on goldplate or holy ashes. Recital 1008 times for 30 days, facing East. Archanalalitha ashtothara

with red flowers.

Offerings : Cooked rice (mixed with curd), sweet-gruel, honey and water.

Effects : Cure of all diseases, physical strength.

2. Yantras from *Kalpacintāmanih*:

Pacification 1

Name : Jvara-Vināsanam

Object : Pacifying fever

Description : Draw a yantra with straight lines on all sides and

join them. Then draw a quadrangle upon this yantra with eight petals. The yantra should be drawn with the liquid of dhattūrā plant, on a piece of cloth from the dead man's coffin on the spot where the dead are cremated. Thus should be done either on the eight or on the fourteenth day of the dark fortnight. Write the name of the person in centre with ram on each of the four sides with ram in each of the eight petals.

Worship the yantra by offering lovely flowers collected for the purpose. The process lets even deadly fever disappear immediately.

Pacification 13

Name : Sākini-Dākini raksākaram

Object : Protecting from evil spirit

ॐ	ॐ	ॐ	ॐ
ॐ	ॐ	ॐ	ॐ
ॐ	ॐ	ॐ	ॐ

Description : Draw this Yantra on a piece of cloth spread over a board but not on the ground. Draw four lines vertically and four horizontally making eight abodes thereby, write ** in each abode and worship the same. Offer presents (bali), flowers, incense, burn-

ing candles and drink. Worshipped in this way, the yantra never fails in its aim.*

B. Therapeutic aspect of Mantra :

Introduction

Name and Form are the two inter woven aspects pervading the whole universe. Because of their all pervading nature, they can be the instrument for the realization of Reality. In Tantra, these instruments have been accepted in the form of Mantra and Yantra.

Realization of Reality is nothing but the realization of the original nature of one's own self. This self is like a deity which resides in a temple of body. For getting nearer the deity, one has to cross the gates of body-mind by removing the obstacles through a process of purification and thereby perfecting the body-mind. For this process of purification and perfection, the Mantra and Yantra; one relating to Name and the other relating to Form are, according to Tantra, principal aids. How Yantra purifies body-mind that we have seen under the title "Therapeutic Aspect of Yantra."

Like Yantra, Mantra also works as therapy. Apparently, a Mantra looks like a mere collection of words. And being so a possible question may arise here is that does mere pronunciation of Mantra can cure disease ? The answer is positive provided the words are pronounced according to certain conditions laid down by those who have practiced them and tested their truth. The potency or efficacy of words pronounced by an expert or siddha does not reside in words only. It resides in the efforts of siddha which the word is charged with e.g. The Kuran , The Bible, The Vedas and other holy words.

Here in this chapter an attempt has been made to expose the sound principle on which Mantra therapy stands. We shall proceed first with the meanings of Mantra.

1. Meanings of Mantra:

Human mind can not conceive the nameless and formless Reality. Energies or the Higher Reality, which we call as deities

can be reached through symbols like name and form. Only through name and form one can reach nameless and formless. These two symbols are technically called in Tantra, as Mantra and Yantra.

Like Yantra, Mantra also represents deity. The power of deity is inherent in Mantra if it is charged and being so mantras are very powerful and effective. These powers are latent in a Mantra as tree in a seed. A sprout from a seed emerges out only when it gets proper sunlight, water etc. Like wise the latent power of Mantra can be activated by constant repetition, austerity, faith.

The term Mantra is a combination of two terms namely man+trāna. Man means to think or to meditate while trāna means liberation. So in terms of Tantra, we can say, the Sakti which liberates through meditation is Mantra.¹

Liberation from what ? Liberation of Mind from its various modifications. As we know, mind is very fleeting. It constantly issues various modifications. Due to its fleeting nature it dissipates its energy. If we can prevent his dissipation of energy, or in other terms, if the powers of mind are channelized, they can create such a higher level of mind which is generally not present in lay man. Mantra does this job easily. The concentrated mind is the source of all success. Mantra, therefore, can be one of the most effective instruments for the fulfillment of desires.

Mantras are written in letters or sabda and can be pronounced with the help of sound. So different sounds contain different types of energy or deity. And because of this proper pronunciation of Mantra is highly required for attainment of gaol. The red light against improper pronunciation of Mantra has been shown by Das gupta, Sasibhusana. As he declares, "...slightest devotion either in articulation or accent or modulation was calculated not only to make them negatively fruitless but positively harmful."² By the proper pronunciation of Mantra, as described by Sāstra, controls the energy inherent in Mantra through which he gains whatever he wants. It is not a mere accident but a sound scientific reason lies behind this achievement.

The whole Mantra Sastra is based upon the potentialities of words or sabda. Five gross elements are the constituents of both microcosm and macaroscocos, namely Ākāśa, Vāyu, Teja, Āpa and

Prithivi. Their origination is stressed back to sabda, sparsa, Rupa, Rasa and Gandha respectively. In this order of creation, Ākāśa, in the gross element, and sabda in the essence of element are considered as most subtle element. The subtlety of sabda is considered to that extent, it is viewed as Brahman or Sabda brahman, source of creation.³

Mantras are the collection rather the systematically arranged word-patterns which are very powerful. When a word is pronounced, even at mental level, it creates vibrations. These vibrations throw out from the mind and attract same type of vibrations. Then it becomes a collocation of vibrations when it returns back to its centre, the mind. When it comes back, it becomes more powerful and potential. And because of this, if suppose, we want to be good or pure, we should meditate upon such qualities. Constant meditation on particular concept becomes the part of personality.

Though Mantras are powerful but haphazard pronounciations of it does not give any result. In Tantra, certain rules and regulations are prescribed even for the correct pronunciation and recitation of Mantra. A Mantra works only when it becomes realized (Siddha Mantra). A Mantra can not be easily realized. For Mantra sadhana guru or guide is required. First, guru has to decide the Mantra according to the tendency of sadhaka. In the Sārdā Tilaka (petal-2) it is declared that if Mantra and sādḥaka, both are in friendly relation, Mantra gives quick results. If the relation between them is of enemy, result is doubtful. A special chart, that is A-Ka-Tha-Ha cakra has been given by Tantra to decide the relationship between sādḥaka and Mantra.

After the selection of Mantra, it should be constantly mentally pronounced with spiritual fervour. He has to assume an yogic posture, perform Nādi Sodhana, prāṇāyāma, turn prāṇa on the way to Susumna and repeat the Mantra when prana flows into Susumna. Austerity Firm faith and devotion in Mantra are also the basic requirements for Mantra siddhi. These are all keys which open the closed doors of treasure of powers.

There are different Mantras prescribed by Tantra, for different purposes. Some of them are give in the appendix.

2. *Bija Mantra : Seed Letters :*

As tree lies in a seeds, in the same way the power of Mantra lies potentially in a seed letter or bija mantra. As a tree comes out from seed, likewise the whole Mantra evolves from seed letter. And being so, the seed letters are considered as Yoni, source of creation. Different seed letters are prescribed for different deities. Here we shall see some of them.

1. Seed of speech (vāg-bija)

Sound : AIM

Definition : This Mantra is also called Sārasvati (pertaining to knowledge) or Sarasvati (pertaining to the goddess of knowledge). It represents the form of consciousness embodied in the goddess Sarasvati, "Ai represents Sarasvati. The nasalization means the removing of pain. This is the seed-utterance of Sarasvati with it the 'word' is worshipped."

Purpose: Acquiring knowledge and wisdom, mastery over words and power of speech.

Reference: Tripurā tāpini upniṣad, Karpura stava and Varadā Tantra.

2. The seed-of-illusion (māyā bija) or Seed-of-Energy (Sakti bija)

Sound: HRIM

Definition: This Mantra represents māyā the power of illusion. It stands for the lady-of-spheres (Bhuvanesvari), the dispeller of sorrow. It is root from which develop ether and other elements of the manifest world, the principle over liberated, unbounded by the triple form of time. "Ha means Siva. R is his Nature Prakriti. I means Transcendent Illusion (mahā-māyā). The sound is the progenitor of the universe. The nasalization means the removing of sorrow. The lady of the sphere should be worshipped with this (Mantra) (Varadā Tantra).

Purpose: Conquest of the unmanifest, of the power of Nature. Transgressing the laws of time and space.

Reference: Tripurā tāpini upnisad 1, 13 Karpura Stava, Varadā Tantra etc.

3. The seed-of-Existence or Seed-of-Fortune (laksmi-bija)

Sound: SRIM

Definition: This mantra represents the goddess of fortune and multiplicity, Laksmī, the consort of Vishnu. 'S' represents the transcendent divinity of fortune. R means wealth. I is satisfaction. The sound means 'limitlessness'. The nasal-ization means the dispelling of sorrow. This is the seed utterance of the goddess Lakshmi through which she should be worshipped." (Varadā Tantra)..

Purpose: Gaining worldly wealth, power, beauty and glory.

Reference: Tripura tāpini upanisad, Varadā Tantra etc.

4. The Seed-of-Desire: (kāma-bija)

Sound: KLIM

Definition: This mantra represents the form of joy of pleasure, the procreative aspect of the power of Siva in the form of his consort, the Transcendent-Goddess (Mahesvari). 'K' represents Eros. (kāmadeva) or Kṛṣṇa, the incarnation of divine lust. L means the lord of heaven Indra. I means satisfaction. The nasalization is the giver of both pleasure and pain. The seed of Desire is spoken to you out of love, O Great Goddess." (Varadā Tantra).

Purpose: Gaining transcendent knowledge and also pleasure, victory and royal power.

Reference: Tripurā tāpini upnishad, Karpura stava, Varadā Tantra.

5. The Primordial-Seed (ādyā-bija) or seed-of-the-Power-of Time (Kālī-bija):

Sound: KRIM

Definition: This mantra represents the power of time, the power of death, the destructive aspect of Siva and thus the goddess Kālī, the power of time.

'K' is Kālī. R is the Brahman. I is the transcendent power of illusion. The sound is the "Mother of the Universe". The nasaliza-

tion is the dispelling of sorrow. The goddess Kālī should be worshipped with this mantra to the pacifying of all pain." (Varadā Tantra)

Purpose: Gaining detachment power over death transcendent knowledge.

References: Tripurā tapini upnisad, Mahānirvāna and Varadā Tantra.⁴

Other seed letters

Dum	-	Durgā
Gam	-	Ganapati
PHAT	-	Weapon for destroying anything
STRĪM	-	Liberates from difficulties

Seed letters of the Elements:

LAM	-	Earth-Prithvi
VAM	-	Āp. water
RAM	-	Teja-Fire
YAM	-	Vāyu-Air
HAM	-	Ākash -Ether

The Thought-Form of Fifteen Syllables (Pancadasi) of the first Goddess:

Test — Ka-e-i-la-hrim, Ha-sa-ka-ha-la-hrim,
Sa-ka-la-hrim.

Meaning:

Ka	-	lust
e	-	womb (or speech)
i	-	the substance of lust
la	-	thunder bolt-bearer (or the earth, or Siva)
hrim	-	a cave (the seed mantra of the Goddess).
ha	-	Siva

Sa	- energy	sakala. every- thing
Ka	- Wind (or lust)	
la	- Lord of heaven (Indra) or Siva	
ha	- cloud (or Siva)	

Definition: this represents the power of the self, the power of enchantment of the world.

No. of repetition: to be repeated twenty one or 108 times.

Purposes: to attain all the desires and liberation.

Reference: Devi upnishad Nitya soda-Sikârnava, Varivasya Rahanya etc.⁵

These Bija mantras should be constantly repeated for quick results. The process of constant repetition is known as japa. Now we shall see something about japa.

C. Japa:

Japa sâdhanâ is prescribed by all religious. It plays significant role in sadhana. Because of its significance, Lord Krishna had declared, 'I am the japa yajna, among all yajnas. (Yajña, among all yajnas. (Yajñānām japayajñōsmi II)

Japta is a spiritual exercise. It is a scientific process for cultivation of will power. Mantra japa ensures various powers which is also again helpful in coming over the hurdles lying in the way of success.

How japa does this work or what is the meaning of japa this can be asked. In the term japa, 'Ja' removes the vicious circle of life and death while 'pa' removes sins. Hence japa is that which removes both the circle of life and death and also sin.⁶ There are various ways designed by Tantra for the repetition of Mantra or japa. These various ways we shall see under the title "Kinds of japa".

1. Kinds of Japa:

1. Nitya japa:

As bathing, eating etc. are required for the maintenance and

purification of external body likewise, for the internal purification, mental exercise like japa is required. This should be done daily without any exception.

2. Kàmya japa:

Japa is done for various purposes. The japa which is done for the fulfillment of specific desire, it is known as Kàmya japa.

3. Acala japa:

Japa sàdhanà varies according to the goal of desire. A number of japa is fixed which should be compulsorily be done for the attainment of the desired goal. This type of japa also should be done at fixed place and time. This process strengthens the will power of sàdhaka which ultimately results into success.

4. Cala japa:

Cala japa can be done at any time or in any situation. No rules and regulations are prescribed for this. The nature of mind is to think either good or bad. For avoiding the bad thoughts this cala japs is utilized.

5. Vācika japa:

Japa which is done in loud voice is known as Vācika japa. this type of japa is considered at low and works only at initial level of sàdhanà. Though it is considered as low, it is good for concentration of mind.

6. Upānus japa:

In this type of japa, only the movement of lips takes place but no sound is heard. This type of japa helps in the internalization of sense which are generally externalized.

7. Mānsika japa:

In this type of japa, neither tongue nor the movement of lips takes place. It is done only at mental level. Because of its subtility, it is considered as the best type of japa.

8. Ajapà japa:

This type of japa is done without mālā. This should be done with the process of respiration. While exhalation, Mantra Ham and while inhalation, Mantra Sah should be pronounced.

All these types of japa differ only in the manner of pronunciation. The basic principle of japa sâhdanā is that it should be done constantly with faith, devotion and concentration.

2. Therapeutic Aspect of Japa:

Japa means constant mediation on specific concept. It is the nature of mind that the idea on which it constantly meditates becomes the part of personality. If we think positively, mind also becomes positive which impact also can be felt on body. Negative thinking harms both body and mind. This necessarily leads us to infer that mediation on idea of good health invariably results into good health.

Mental tension is the root of most of the diseases. In this age of fast life, we constantly have to face mental tensions. By constant repetition of Mantra, mind forgets everything about the external world and that way mind gets relief from tensions.

Japa also increases faith in God. God is omnipotent and whatever happens, it happens either for good or for bad is due to his wish. So there is no reason to be worried about anything. Tranquillizers and drugs like camphor also do this job, In fact actually doing more harm to the body than good. Japa, therefore is an innocent and yet psychologically better, longtime lasting remedy than any type of tranquillizers.

D. Therapeutic aspect of Mantra:

Till now, Mantra has been considered as mere hypocrisy and humbug. But now it has been accepted scientifically, specially in the area of therapy, or as a healing agency.

The connotation of the term Mantra itself shows that it liberates its sadhaka (Mananâtrânâti iti Mantra). It liberates its sadhaka from physico-mental-spiritual troubles). (Adhi-Vyâdhi-Upâdhi) Mental

troubles like tension generated from the complexities of life, the possessor of the worried mind becomes unhappy and ultimately becomes a victim of mental disease like schizophrenia, split personality etc.

The intense form of tension end into the psychosomatic diseases. It makes both body-mind diseased. Mantra japa makes one free from worries and that why it also removes the bonds of mental physical disorders.

There are certain reasons which are considered as the cause of disease. One of them is the imbalance of hormonal secretions of glands. Over secretions and under secretions both create disorder in body-mind. Proper secretions depend upon mental state of a person. When a person is in a happy mood, glands do not work properly. While if mind is not in a happy mood, glands do not work properly. This improper way of working of glands results into disease. Mantra gives happiness to mind and keeps mind silent. In the silent mind glands work without any obstacles or disturbances and that way here, Mantra works indirectly as therapy.

The impact of Mantra japa also can be seen on the brain cells. Our brain is divided into two halves. The large brain and the small brain. The small brain contains a portion known as hypothalamus. In this area of brain, cells of hunger, thirst etc.. are located. When a person is under tension he becomes more excited which results into high blood pressure. It has been worked out that constant repetition of Mantra japa decreases this excitement and also normalize the blood pressure.

How Mantra does this job? Mantra therapy is largely related with the process of autosuggestion mentioned by Psychology, in which either healer or a patient has to give a constant suggestion. Here, in the Mantra therapy, constant repetition of Mantra or letters, penetrates the conscious mind and the sound waves of Mantra enters into the subconscious mind is more powerful than conscious mind, and its impact also can be seen on the body-mind. So the impact of positive state of subconscious mind effects body-mind positively. This positively can be induced by Mantra japa.

In the healing through Mantra, by constant of repetition of

Mantra, sādaka concentrates his mind on a Mantra which produce a state of tranquillity.⁶ So this state of meditation. This state of meditation works as therapy in two ways. Firstly, meditation makes man aloof from the external mental tension which are considered as the root of diseases and secondly, the state of meditation is a result of concentrated mind. This cultivates inner latent will power or the power of resistance against diseases. Thus by removing the mental tensions and by cultivating inner power, meditation works as therapy. Mantra-japa is the easiest and the best way for inducing such a state of meditation.

The healing through Mantra is possible by two ways. One is self healing while in second type of healing, heal heals patient. In a diseased body, it is not always possible to do Mantra. In such a case, a Mantra healer transfers his inner power into a patient. Here letters of Mantra work like channel through which power travels. The permanence of the cure done by Mantra, depends upon the intensity of the inner power of a healer.

The concept of the Māntric therapy also has been accepted by the Ayurveda, an Indian art of meditation. The seers of Ayurveda, Caraka and Susruta have accepted it as therapy.⁷

Besides this, Mantra therapy is also utilized for removing the poison. Sueruta has mentioned the process of removing the poison by Mantra in the kalpasthāna of his samhitā. "A physician well versed in the Mantras of antivenomous potency should bind a leigature of a cord consecrated with appropriate Mantras which would arrest a further spread of the poison. The Mantras full of occult energy of perfect truth and divine communion, disclosed by the Devarshis and Brahmins of yore, never fail to eliminate the poison from the system, and hold their own even in the case of deadliest poisons".⁸

There are also some Mantras, prescribed by Tantra for health and longlife which are here, given in the appendix.

In the Mantric therapy, there is nothing like miracle of humbug. It is just a way of cultivation of inner resistance power against

diseases and positively strengthening the will power in the case of self-healing while in the case of healer and patient, a sādḥaka who has realized the Mantra, transfers his awakened powers through the medium of Mantra.

In the concluding portion of this chapter, we can say that., Mantra and Yantra are the two aids of Tantra. Tantra has penetrated the very root of disease, that is, unbalanced mind. Mantra and the Yantra are the instruments through which one can stabilize the mind. This stabilized or concentrated become full proof against all kinds of external attacks of diseases.

Appendix:

3. Mantras prescribed by Tantra for different purposes:

1. Remover of diseases:

Aum sam sām sim sīm sum sūm sem saum sam sah
vam vām vim vīm vūm vem vaim voum vah vah
ham sah amruta varcase svāhā

— Uddisi Tantra

2. Bestower of liberation (Moksa):

Srīm hrīm kṛīm kṛusnāya namaḥ

— Gautamiya Tantra

3. Giver of Dharma, Artha, Kama and Moksa:

Aum saccideka brahma-

— Mahanirvāna Tantra

These mantras are taken from the Tantra Mahāvijñān by Sri Rama

Sarma, pp. 454-55.

4. Mantras for health and long life:

In the eleventh chapter of the Durga Saptasatī, there is a verse in which sādḥaka asks to devi for health.

Rogānasesānapahamsiustā rustā tu kāmān sayalanābhisāa-
na ||

In the Argalà stotra of Devi stuti, it is also asked to devi for health.

Delhi Saubhàgyamàrogyam dehi devi paramam sukham

— Argalà stotra, 12

A mantra for long life is prescribed into the Rudràstàdhyayi.

Aum trayambakam yajàmahe sugandhimpusti vardhanam||

Urvàrukamive bandhanāt mrutyo mukhiyamamrutāt ||

— Rudràstàdhyayi, 515

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

Chapter-9

Therapeutic Aspect of Tantra

Chapter-9

Introduction:

Desired life span or a long life has always been a matter of attraction of the human race. Tantra has its own unique method of healing and for prolonging life span.

Tantra has penetrated the very root of disease. It removes the accumulation of impurities which is also one of the causes of disease from the body vessels and also from subtle channels. It purifies the body vessels through the six purificatory actions (satkriyàs) mentioned by the Hathayoga. While it removes the impurities of subtle channels through the process of Sumanu described by the Gherand Samhità. The process of the Bhuta Suddhi, the important aspect of Tantra sàdhanà also plays an important role in the purification of body-mind complex.

Moreover, Tantra has also mentioned the process of streightening the purified body through the intake of the Rasa or prepared mercury (pàrada).

These processes largely deal with the purification of body. It has also mentioned certain techniques through which, the body which has already become a victim of disease can be cured. The unique methods of Tàntic healing are the Science of breathing known as Siva Swarodays, Mudrà, process of Sat karma, Mantra, Yantra etc. Among all these we have already dealt in detail about Mantra and Yantra therapy. In this chapter we shall try to focus the Tantric way of rejuvenation and various kinds of healing. Let us proceed with the purification of physical body.

A. Purification of Physical Body:

In Tàntism, human body enjoys significant place. As the Gheranda Samhità (1.8) declares, the body is no longer a source of pain, but the most reliable and effective instrument at man's disposal for "conquering death". And science liberation can be

gained even in this life, the body must be preserved as long as possible and in perfect condition, precisely as an aid to meditation.²

For preserving the body in perfect condition, Tantra especially the Hathayoga, prescribes the method of training and developing the body and mind. The goal of Tantra is to discover the hidden layers of mind, potential powers of body and to awaken the inner spiritual faculties. For this, control over physical body is highly required. In the Hathayoga, control over body starts with the cleaning process known as purificatory actions or kriyās. They are six in number hence they are known as Sat kriyās. These actions or processes help in the elimination of the poisonous substance accumulated in the bodily channels.

Accumulation of poison in channels is also one of the causes of disease. Body constantly throws waste materials through urine, perspiration, excretion etc. It constantly does this process. The Hathayogic purificatory process enhances this process of elimination of waste products of body.

1. Hathayogic way of purification of body:

The sat kriyās or the six purificatory actions mentioned by the Hathayoga covers the entire body. They are meant for cleaning the respiratory system, *food pipe, eyes, stomach, lower colon* etc.. The name of these kriyās are *Dhauti, Basti, Neti, Nauli, Trātaka and kapalabhāti*.² These actions clean stomach, colon, nasal passage, abdominal organs, eyes and respiratory organs respectively. We shall proceed first with Dhauti.

a. Dhauti:

Dhauti means washing. It is divided into four types:

- 1) Internal washing—Antardhauti;
- 2) Cleaning of teeth—Danta dhauti;
- 3) Cleaning throat—Hrid dhauti;
- 4) Cleaning of rectum—Moola Sodhanam.³

Again the internal washing, Antardhauti is divided into four

parts: (1) Wind purification—Vātāsāra. (2) Water purification—Varisāra, (3) Fire purification—Vahnisāra, (4) Cloth purification—Vastarāsāra.

Wind purification: Vātāsāra:

In this process, one should swallow the air to the stomach by closing the epiglottis till the stomach is filled with air. Then move that air therein and then slowly force it out through lower passage.

Water purification: Varisāra:

Drink a large quantity of water to which a little salt is added and then shake the abdominal portion. Then vomit it out by putting finger at the root of the tongue. This should be done in the morning on an empty stomach. This prevents constipation.

Fire purification: Vahnisāra:

A person who wants to do this, should sit in a comfortable posture. To perform it, the trunk should bent forward, hands put on the knees and deep inhalation be performed. Hold the breath outside as far as possible. While holding the breath, push the abdomen backward and forward. This process stimulates all the portion with abdomen, viz., stomach, intestine, liver, spleen, pancreas etc. This process removes constipation.

Cloth purification: Vastrasāra:

This process prescribes the purification of the alimentary canal. This canal is a long tube extended from mouth to anus and covers the area of mouth, pharynx, oesophagus, stomach, large and small intestine.

The cloth purification is prescribed in the following way:

Take a fine piece of cloth, three inches wide and fifteen feet long. No piece of loose thread should be hanging from its side. Wash the piece. Dip it in tepid salt water. Then swallow the one end of it little by little. On the first day swallow it only one foot. Then increase it by daily practice. During process do not be hasty. This process should be done with empty stomach preferable in the morning. This process is beneficial for the abdominal and respiratory disorders.

2. Danta Dhauti: Cleaning of teeth:

Danta dhauti is massaging of teeth with water or powdered earth so long as dental impurities are not removed.

3. Hrid dhauti: Purification of tongue:

For cleaning the root. Put the three fingers, index, middle and ring, in a joint manner. Rub well the root of the tongue. Wash it again and again. Repeat this process. This process helps in bringing out excretion from stomach and lungs.

4. Moola Sodhanam: Cleaning of rectum:

Moola Sodhanam is a cleaning of rectum. With the help of the middle finger, the rectum should be carefully cleansed with water again and again. This process destroys constipation, indigestion etc.

b. Neti: Nasal Cleaning:

Neti is a cleaning of nasal passage of the respiratory system. There are two types of neti. (1) Suta neti and (2) Jala neti.

In Suta neti, take thin thread and insert it into nostril and passing it through it, pull it out by mouth.

The jala neti can be done with the help of lukewarm salt water. Pour a small portion of the salt water through one nostril by closing the other nostril with thumb. Raise the head and allow the water to flow down to the throat and expel it out through mouth. The remaining portion of the water in the mouth should be blown out by forced expiration.

This process removes disorders of cold and ensures sharp eye sight.

C. Trataka:

Trataka is a gazing at particular point without winking the eye. This process can be done by various ways.

In one of the methods, a candle flame is kept three feet away from the person. The flame and the eye should be in a horizontal

line. In the comfortable posture, with the spine straight but relaxed position, person looks at the flame for a minute. After that he closes the eyes, relax the eye muscle and visualize that flame between the eyebrows. Again do this process. This may be continued 4 or 5 times. This exercise brings concentration and strengthens eyes.

In other Trātaka technique, called *Bhrumadhya drisit*, the half closed eyes are directed upward toward the space between the eyebrows. This process enables the mind to become painted.

In the *Nāsāgra dristi*, the gazing takes place at the tip of the nose. This process strengthens the eye muscles and increases concentration.

d. Kapālabhāti:

This is an exercise for the purification of the nasal passage and lungs. This process is specially designed to remove the spasm in bronchial tube. This also helps in curing Asthma and also removes impurities of blood.

Technique:

After assuming a lotus posture, take a few deep breaths. Then rapid inhalation exhalation should be done. More attention should be given on exhalation. Start one round of this exercise with ten expulsion at the end of the tenth expulsion take deep inhalation. Gradually increase the number of rounds.

e. Nauli:

Nauli is an exercise for purification and strengthening the abdominal muscles. Before doing the nauli process, the practice of the *Uddiyana bandha*—abdominal contraction is necessary.

Technique of Uddiyāna bandha:

Sit in any meditative posture. One has to empty the lungs by a strong and forcible expiration. When the lungs are empty, the diaphragm raises naturally to the thoracic cavity. Draw up the intestine and the navel toward back of the body. Keep the abdomen as long as one can hold the breath comfortably outside with-

out inhaling.

Nauli:

The same process of contraction takes place in the nauli kriya. While in Uddiyāna bandha, allow the centre of the abdomen to be free by contracting the left and right side of the abdomen. This is known as Madhya nauli.

After mastering this, the next stage is to control over the left and right muscle of abdomen. This is known as Vama and Daksina nauli.

1. Basti: Cleaning of lower colon:

The basti process of cleaning is done by creating a vacuum through nauli kriyā in the intestine.

Sit in a tub of water and practice nauli. Create vacuum in intestine. To keep the sphincter muscle open, insert a small tube about four inches in length into the rectum. As soon as the water is drawn, the tube should be removed. And with a few abdominal churning (nauli), the water is thrown out from the large intestine with muscles and other waste products.

This process cleanses the abdominal muscles and cures urinary and digestive disorders.

From the above mentioned description of the six purificatory actions mentioned by the Hathayoga, we can see that, these processes cover the whole body. By applying these processes one can purify one's body, with the result that one can not be the victim of physical diseases.

As we know, the origin of the physical diseases are located in the mental disturbances. So mind also should be purified, or in other terms, should be concentrated. The application of the pranayama technique is the best way for concentration of mind. As the pre-requirement for performing the prāṇāyāma is a purification of Nadis or channels. As we know, in our body a net of nerves is spread out. Prana or the vital breath moves through this channels. If there is any impurities in them, it is difficult for

prana to move. So first Nādi purification is required.

Now we shall see how this nādi purification can be done with the help of the Tāntric seed letters like *vam*, *ram*, *tham* etc.

2. Tantric way of Nādi purification:

The fifth lesson of the Gherand Samhitā declares the Samanu process of purification which should be done mentally with the Bija-Mantra or seed letters. The translation of the verses runs as follows:

Sitting in the Padmasāna posture, and performing the adoration of the Guru. As taught by the Teacher, let him perform purification of Nādis for success in pranyama. Contemplating on Vāyu-Bija (i.e. *yam*), full of energy and of a smoke colour, let him draw in breath by the left nostril, repeating the Bija sixteen times. This is *purāka*. Let him restrain the breath for a period of sixty-four repetition of the Mantra. This is *Kumbhaka*. Then let him expel the air by the right nostril slowly during a period occupied by repeating the Mantra thirty-two times.

The root of the navel is the seat of Agni-tattva. Raising the fire from that place, join the Prithvi-Tattva with it, then contemplate on this mixed light. Then repeating sixteen times the Agni-Bija (*ram*), let him draw in breath by the right nostril, and retain it for the period of sixty-four repetition of the Mantras, and then expel it by the left nostril for a period of thirty-two repetitions of the Mantra.

Then fixing the gaze on the tip of the nose and contemplating the luminous reflection of the moon there, let him inhale through the left nostril, repeating the Bija (*tham*) sixteen times; let him retain it by repeating the Bija (*iham*) sixty-four times; in the meanwhile imagine (or contemplate) that the nectar flowing from the moon at the tip of the nose runs through all the vessels of the body and purifies them. Thus contemplating, let him expel the air by repeating thirty-two times the Prithvi Bija *lam*.

By these three pranayamas the nādis are purified. Then sitting firmly in a posture let him begin regular prāṇāyāma.⁴

Thus by applying the Hathayogic way of purification, sâdhaka purifies his bodily vessel, while by applying the Sumanu process, a Tânttric way of purification, sâdhaka purifies subtle channels through which vital air flows. Beyond these two, there is also another Tantric way, that is the purification of body. Bhûta Suddhi, which is the integrated part of Tânttric sâdhanâ, which we have already seen in the chapter 'Tânttric sâdhanâ'. To avoid the repetition of it, here in a nutshell, we can say that, in the process of the Bhûta Suddhi, sâdhaka has to imagine a man of impurities (pâpa purusa) and that man should be first dried out then burnt away mentally. After destroying this man of impurities, sâdhaka has to create a new divine body with the help of the elixir of the Sahasrâra cakra. This whole process should be done mentally. While destroying the man of impurities sâdhaka destroys bodily impurities and that way this process secures bodily purification.

Purification of body is not the only goal of Tantra but that purified body should be strengthened like rock so that it can resist any kind of physical mental disturbances. For that, Tantra has prescribed the theory of Rasa.

3. Theory of Rasa: A Tantric way of rejuvenation:

The Nâtha siddhas and the Rasa siddhas are the two Tânttric cults which are based on the ideal of liberation during life-time, Jivan-mukti. In order to keep body undecayable many experiments were made by Tântrics. Among them use of mercury for rejuvenation of body is the main one.

Tantra considers man or human body as the highest evolute of the nature. As such the essence of the cosmic world, it believes, is embodied in human body. The natural deduction of this theory is that, there is nothing in the cosmos which is not there in human body.

The Nâtha cult and the Rasa siddhas believe that the process of evolution has three stages. The creation, the maintenance and the destruction. Absolute Reality is believed to pass through these three stages when the process of manifestation starts. The creation function is symbolically identified with Moon, while

destructive function is identified with the Sun. The goal of the Natha siddhas is to attain the non-dual state of immortality. This can be attained by the union of Sun-Moon located inside the body.

According to these two cults, death or decay takes place because the elixir which trickles down from the Moon situate at the Sahasrāra, ordinarily falls into the fire of the Sun, which is located at the navel region, where it is dried away. Thus the elixir of body, being dried up the body becomes a victim to the destruction. This is the ordinary course of the flow of nectar which must be checked. The elixir should not be consumed. If once it is done, sādḥaka gets control over time means enjoys desired life span.

Utilization of alchemy (Rasa) is one of the ways of getting control over time. In Sanskrit lexicon, the meaning of this term is juice but in Tāntrism it is specifically used for mercury.

Tāntric alchemical ideas grow around the Siva-Sakti symbolism. Mercury is considered as the male principle or Siva while sulphur is considered as the female principle or Sakti. The substance that is produced through the combination of these two elements makes the creature immortal.⁵

Rasa is called pārada because it leads one to the other shore of the world.⁶ It is also considered as the seed of Siva.⁷ This mercury or parade is said to be able to do two extraordinary things: (1) Rejuvenation of body and (2) Conversion of base metal into gold. Here we are concerned only with the first purpose.

Mercury can not be utilized in a naked form due to its poisonous nature. So for the medicinal use of it, it has to undergo eighteen different processes (Samskāras). This prepared mercury should be utilized as giver of immortality.

This theory of Rasa discloses the secret of the prolonged life of our ancient seers. So by the Hathayogic way of bodily purification, Tāntric way of purification of subtle nerves and by intake of the prepared mercury, one can get control over decay. The basic requirement for all processes is that, at initial level, it requires the guidance of an expert without which instead of long life one can be victim of death.

This is about the purification of body. If suppose somebody becomes victim of disease how he can cure himself we shall see now.

B. Various Tantric ways of healing:

Tantra not only purifies the body but it also removes the diseases which are already there in the body. There are various ways of this. Among them techniques of Sat kriyās, Siva sworodaya, Mudra etc. are unique one.

Sat karma is a process followed by contemplation on specific Bija-Mantra or seed letters like yam, vam, ram etc. Sat karma samgraha is a text of both yoga and āyurveda prescribed by Lord Siva Himself.⁸ Now we shall see Sat karma process with the help of the treatise Sat karma samgraha.

1. Sat karma : Six actions:

Sat karma, six actions, are six in number which are namely (a) Ūrdhvacakri, (b) Madhyacakri, (c) Adhacakri, (d) Tratakam, (e) Kasā and (f) Netrikanam.⁹ We shall explain, in brief, each of them.

1. a. Ūrdhvacakri:

This process is performed by entering one's own thumb wet with water, in the centre of the palate. Then rotate it. By doing again and again, the impurities, which are situated there can be removed.¹⁰

As this treatise, Sat karma samgraha, declares while doing this process, he has to contemplate upon the bright triangular Ram, Bija-Mantra or seed letter of fire. Constant practice of this process removes the impurities of eyes, ears etc.¹¹

2. b. Madhyacakri:

This process is done by inserting the finger at the root of the tongue and the front of the uvula. Rotate the finger there with the remembrance of the god of Agni. By constant practice of this process the excess phlegm can be removed.¹²

3. c. *Adhacakri*:

In this, the index finger should be entered in the anus. This process should be continued till the expansion of the anus with the contemplation on Yam seed letter. This process removes dropsy, disease of rectum, enlargement of spleen.¹³

4. d. *Tratakam*:

This process is done by the fixation of the eyes on a minute object till tears begin to fall. This should be done without winking the eyes with the repetition of the seed letter of water, that is, Vam. This removes all the diseases of eyes and also sleepiness.¹⁴

5. e. *Kasā*:

In this process, a fine smooth thread should be introduced into throat through nose. The friction of the thread in nose and throat removes the disorders of the phlegm.¹⁵

6. f. *Netrikanam* :

In this process, a clean, soft, strong lubricated made of white thread should be introduced into the *Idā* and taken out from the *pingalā*.¹⁶

Thus the application of the process of *Sat kriyā* removes the disease like dropsy, sleepiness, disease of ears, eyes, disorders of phlegm etc. These processes have a resemblance with the six purificatory actions mentioned by the *Hathayoga*. It differs on the ground that these process should be done with the repetition of the seed letters while in the *Hathayogic* practice, no repetition of *Mantra* takes place.

There is also one another treatise, like *Sat Karma Samgraha*, a dialogue between Lord *Siva* and *Pārvataī*, is *Siva svarodayam*. It's a scripture related with the process of inhalation and exhalation. It has mentioned the technique of diagnosis, the disease by pattern of breathing process and technique of healing by manipulating the breathing process. Now we shall see something about the *Svarodaya*, a science of breathing.

2. Siva Svarodaya: A Science of breathing:

Siva Svarodaya is a scripture, told by Siva to Parvati for the welfare of the human beings. This treatise is based on the concept of vital force or prāna sakti which pervades in the entire body. The vital force is the very core of life. This can be seen by the difference between a living body and a dead body. In former, there is a presence of life force or prana sakti while in later it is absent.

In reply to one of the questions of Pārvasī, Lord Siva says, prāna is the best friend and best brother. Nothing is superior to prana. Breathing is the gross form of that vital force or prāna sakti.¹⁷

Prāna Sakti is related with both body and mind. Physical body is gross while mind is subtle. Prāna is link between these two body mind. Hence it affects both.

The very existence of the physical body as living entity is dependent upon the presence of prāna. This shows the superiority of prana over body. The relation of mind and prāna is also very well known. They are so highly related that as the Hathayoga pradipika declares, by controlling one, the other can be controlled.

Mental disturbances are considered as the root of the disease. This type of disturbances occur due to the fleeting nature of mind. Generally, it is difficult to control the mind but by controlling the vital force, through breathing process, mind can be controlled.

Here the control over breathing process is different from that of the prānāyāma process. As we know, we do inhalation and exhalation either through the right nostril or through the left nostril. Siva Svaroday mentions the duration period of the respiration process which takes in one nostril. At every two hours duration, there is a change in the nostril operating at that time.

We can ascertain which nostril must be working at a particular time during the day and at night. The scripture lays down the correct process of working the nostril at particular time. The work-

ing of the opposite nostril shows the imbalance and hence a signal to the disease. The disease can be cured by changing the working of the nostril.

So in this process of healing, disease is diagnosed by the working of nostril and healed by the manipulation of it. This therapy is also based on the Tāntric principle of the identical relationship between microcosm and macrocosm.

Physical body is a miniature universe. The sun and a moon which are highly associated with the vital force and mental force respectively can also be located in the body. As we have already mentioned in the chapter of Tantra sādhanā that, prāna or vital force flows through subtle channels which are spread out like a net in a body. Three are the main channels, namely, Idā, Pingalā and Susumnā. Susumnā is a meru or a spinal cord along with the former two channels run on the left and right side of it respectively.

Sun is located at the right sides and being so the vital current flows through the Pingalā nādi. While moon is located at the left side and hence mental currents flow through Idā nādi. The flow of breathing through Idā and Piṅgalā takes place through the left and right nostril respectively.

By considering these two above mentioned principles on which this therapy is based, we can say that over working under working or malfunctioning of any nostril creates imbalance in mental and vital current. Over working of right nostril, being related with Sun, results in the vigorous personality. While in the case of Idā, being related with Moon, person becomes victim of caprice.

This fact is also noted by the science, that when the right side and left hemisphere is predominant during a particular time one becomes more aggressive. While more passive functions are to be performed when the left side is predominant.

There is also one another way of Tāntric healing which is also based on the principle of identity between macrocosm and microcosm. The name of this technique is Mudra or gesture.

3. Mudrà: Gestures:

Mudrà is an integrated part of daily Tànttric sàdhanà. It is also one of the pañca Makàras which we have already seen in the Tantra symbolism.

Mudrà is a gesture of hand initially but its goal is total mental identification. Mudrà is based on the principle of identity between macrocosm and microcosm.

Like universe, body is also composed of five elements namely earth, water, fire, air and ether. These elements are situated in the body in a fixed proportion. Mudràs are the means to normalize this proportion of the five elements in the body.

It is believe, the control over five gross elements, the constituents of the body, is located at the five fingers of the hand. The thumb represents space, the forefinger wind or air, the middle finger fire, the ring finger water and the fourth finger represents earth.¹⁸ So thus the control over each element is possible through the fingers.

1. a. Pràna Mudra:

Pràna mudrà is designed for curing the disease like heart attack, one of the prominent diseases of this age.

"..... a patient having a heart attack can check the attack and get instant relief by folding the forefinger down on the mound of the thumb, and joining the thumb with the tips of the third and fourth finger.¹⁹

2. b. Sùnya Mudrà:

"Bend the Madhyàma middle finger, to touch the root of the thumb. Then press it slightly with the thumb.²⁰ This mudrà removes deafness.

3. c. Sùrya Mudrà:

Bend the Anàmikà, (the third ring finger) till it touches the root of the thumb. Then press it slightly with the thumb. The third finger, representing water, is stimulated by the electric heat of the thumb representing sun. This posture is useful for person who

feel heaviness in the body. It's practice produces imbleness and it should be carried out in both hands while sitting in Padmasana for three or five minutes twice or thrice everyday.²¹

4. d. Jñāna Mudra:

"The thumb and the index finger are brought together in gentle contact, not necessarily pressing hard against each other. The other fingers are kept upright. This posture must be maintained on both the hands."

"Those who suffer from a weak memory, insomnia or a feeling of drowsiness, tension and other maladies of the mind should practice this mudra. It helps to increase mental concentration through constant practice."²²

Beyond these Mudrās, there are also some other Mudrās mentioned by the Gherand Samhitā and by the Hathayoga pradipikā. These Mudrās are not only health giving devices they also awaken the latent universal energy, the Kundalini Sakti. Some of the Mudrās are namely Mahā mudrā, Viparita karani mudra, Nabho mudrā, Khecari mudrā etc. These Mudrās are really very-very difficult to perform but as both of the above mentioned treatises declare they are surely to make physical body free from disease and help in spiritual uplift.

Thus the practice of various mudrās ensures the physical and mental health without introducing any drug into the body.

The healing process of Mantra and Yantra, the integrated parts of Tantra have already been discussed in the previous chapter. These two drugless therapies heal the body-mind complex by strengthening or awakening the inner power of resistance against disease through concentration of mind.

The healing hypothesis which we have made in the Section I, especially, in the Chapter of Tantra sādhanā, and all these therapies which are based on the concept of Mantra, Yantra and Tantra, more or less based on the Tāntric principle of identical relationship between macrocosm and microcosm. This principle is such a sound and a rational one that by proper manipulation of it, one can escape oneself from the physical, mental and spiritual dis-

eases.
