^ that's a relief to hear! I've had a medium sized washington specimen waiting on me since last year and haven't gotten around to it yet. I plan on picking as many as I can in the next season to store for future use.

What is proper drying method? I've been doing more dreamwork lately as well and curious as to it's effects in sleep. Anyone experimented with those doses enough to offer opinion?

170°F to 200°F max or less than 95°Celcius for the drying part.
Keep the brown juice that will run out of the fruit, it will yield a potent resin.

Doses for dreamwork are anything from 1 gram to a few grams (you will have some stimulating effect at that dose and if potent mushroom a light psychedelic drunk state very enjoyable), it's easy to sleep if taken

The dreams are amazing..

Just one gram at 6 pm for dreamwork is enough, a good introduction to these fascinating magic mushrooms !

Yes, using them for dreamwork is so very nice. The dreams can be so intense and interesting.

SWIM also likes the "natural viagra" effect they give you in the morning. It will not only give you a hardon, it's also like an aphrodisiac. Since mescaline's effects on libido are documented here elsewhere, I would expect that amanitas could combine well with it for hyper spacesex. But we should be careful, that seems to be uncharted territory (yet).

SWIM looks forward to make a dry (non alcoholic) extract of amanitas to combine it with his next ayahuasca. He thought that they would rather cancel each other out, but now as he reads this link above and reads about combining it with LSD (which seems to be nice) there is hope that this could be very interesting.

Jaguar, please post any experimental combination here so we know what work well.

Someone post rue and amanita in erowid trip reports, he enjoy the ride but said it was not like a walk in the park.

Powerful and rather intense lesson are expected...

Does anyone know what the legality of Amanita muscaria is like in the UK? I was hoping to have some for Yule.

As far as I know amanita in UK is completely legal legal to possess, buy or sell there are many shops in camden town (london) that sell it openly.

Take the tokes, and walk the walk !

Awesome, thanks rOm. After reading up on its history of being used by the shaman of the frozen north, and its links to Yuletide. I figured that this would be the appropriate time for consumption. Also thinking about making a gatherer's cloak of deep green with a white (faux-fur) trim for ceremonial purposes (set and setting eh?) 

Thanks again rOm
